Naukati

6/20/78

Edgington

1056'

Weather: rain
 Water: slight brown, clear
 pH: 8.5
 Air temp.: 52°F
 Water temp.: 56°F
 Flow: 6 cfs (estimate)
 ASA: 4062 M² for 0.5 mi
 (estimate)

Stream 46' wide

Gradient 0.5%

Sluggish

ASA 10%

Angular broken sedimentary
 rock caught between
 upturned bedrock strata.

stream bottom - dark
 algae covered.

bedrock 60%
 gravel 40%

pool/riffle 50/50

large hemlock and spruce

much bedrock

ASA 50%, 100% cobble

coho fry and fingerlings
 abundant

pool wider than long

2.0' deep, 42' x 20'

trail, no fish bones or bear
 signs.

Algae growth on rock

Spring 0.5 cfs

Streambed very dense

Floodplain not
 developed - banks
 stable.

Wildrose and apple

529'
