

42. Cavern Lake *106-30-10800*

Construction of fishpass to access Cavern and Twin Island Lakes proposed in 1986 (but 1971 dive record indicates that fish passage is not blocked). Supplementary stocking of upper watershed proposed to colonize habitat. Would provide access to 5 acres of stream and 349 acres of lake habitat capable of producing an estimated 4,000 coho and 7,500 sockeye annually. Not scheduled as of 1987. Lake is in upper watershed of Big Creek (108 Creek).
