## 2022/23 SOUTHEAST ALASKA HERRING WINTER FOOD AND BAIT FISHERY

The 2022/23 Southeast Alaska herring winter food and bait fishery opens by regulation October 1. Herring spawn dive deposition surveys were only completed for the Craig/Klawock area fishery.

Section 3-B and District 4 (Craig/Klawock): will open at 12:01 a.m., Saturday, October 1, 2022, in those waters of Section 3-B west of a line from Blanquizar Point at 55°37.36' N lat, 133°23.86' W long to Point Santa Rosalia at 55°34.19' N lat, 133°24.84' W long to Point Cuerdo at 55°28.51' N lat, 133°19.00' W long to Point Miraballes at 55°25.87' N lat, 133°05.22' W long and in those waters of District 4 north and east of a line from Lontana Point at 55°12.25' N lat, 133°20.12' W long to Diver Point at 55°11.02' N lat, 133°14.36' W long with the following restriction:

Trocadero Bay: will be closed east of the longitude of the westernmost tip of Canoe Point at 133°01.48' W long.

The 2022/23 Craig/Klawock area total guideline harvest level (GHL) is **7,761 tons** of herring calculated with a biomass accounting model. This GHL is based on a forecasted mature spawning biomass of **38,804 tons** and a harvest rate of 20%. Regulations state that 60% of the GHL is allocated to the winter food and bait fishery and 40% to the Section 3-B spawn-on-kelp pound fishery (5 AAC 27.185 (h)). This sets the GHL in the winter food and bait fishery at **4,656 tons**. Any GHL amount not taken by the winter bait fishery will be allocated to the spawn-on-kelp fishery and announced by March 6, 2023. The forecasted mature biomass at age for 2023 is 24% age-4, 20% age-5, 1% age-6, 45% age-7 and 2% age-8+ herring.

District 7 (Ernest Sound): will be closed. Minimal herring spawn was observed, and a spawn deposition survey was not conducted in 2022. Therefore, a forecast for the 2022/23 season was not generated.

District 10 (Hobart Bay/Port Houghton): will be closed. Minimal herring spawn was observed, and a spawn deposition survey was not conducted in 2022. Therefore, a forecast for the 2022/23 season was not generated.

District 12 (Tenakee Inlet): will be closed. Minimal herring spawn was observed, and a spawn deposition survey was not conducted in 2022. Therefore, a forecast for the 2022/23 season was not generated.

Fishermen and operators of tendering vessels must obtain an ADF&G permit to participate in the winter food and bait fishery (5 AAC 27.179) prior to fishing. For the 2022/23 season, the terms of the permit stipulate: 1) the amount of herring harvested and delivery location be reported to the Ketchikan office for Section 3-B and District 4 by 12:00 noon on the day after fish were harvested; and 2) one 5-gallon bucket of herring is to be provided to the department from each delivery for sampling purposes. Permit applications are available at ADF&G area offices in Ketchikan, Sitka, Petersburg, and Douglas.

The Emergency Order corresponding to this announcement is EO 1H1422.
