2014 HAWK INLET TEST FISHERY UPDATE #3

The department conducted the third of the 2014 Hawk Inlet shoreline test fisheries today. Comparing the total harvests for the day to the ten-year average total harvests, the harvests of all species of salmon were below average. For the approximate date, the pink salmon harvest was 27% of the recent even year average. The sockeye salmon harvest was 69% the 10-year average. Large tides may have influenced catches and the impression was the southbound component of the pink harvest was stronger than the northbound.

The pink salmon sex ratio was 53% male, below the average of 59% male for previous years test fisheries conducted on or about this date.

Hawk Inlet test fishery updates will be posted on the ADF&G web site listed below.
