2018 HAWK INLET TEST FISHERY UPDATE # 2

The department conducted the second of the 2018 Hawk Inlet shoreline test fisheries yesterday. Comparing the total harvests for the day to the ten-year average total harvests, all species but sockeye salmon were below average. For the approximate date, the pink salmon harvest was 6% of the ten-year average and 48% of the recent even-year average. The sockeye salmon harvest was 102% of the 10-year average and the chum salmon harvest was 37% of the 10-yr average.

The pink salmon sex ratio was 73% male, above the average of 63% male for previous years test fisheries conducted on or about this date.

Hawk Inlet test fishery updates will be posted on the ADF&G web site listed below.
