Identifying a legal muskox

Bull muskox horn characteristics:
- Young bulls have larger horn mass than cows, but incomplete growth of a horn boss. (Figs. 1 & 2)
- By fall, 3-year-old bulls have a thin, but developed horn boss. (Fig. 3)
- Mature bulls (4-years-old and older) develop a thick horn boss at the base of each horn. (Fig. 4)
- All bulls have horns that are thicker and more massive than cows. (Figs. 4 & 5)
- Black horn tips can be found on bulls.

Cow muskox horn characteristics:
- Cows do not have a horn boss at any age. Mature cows (4-years-old and older) have horn bases that are small, dark, and visible. (Fig. 5)
- Cow horn diameter is smaller and less massive than bulls. From a distance, the length of the hook may be similar to bull horns.
- Young cows have incomplete growth of horn bases and considerable white hair between the horns.
- Black horn tips can be found on cows.

Trophy destruction required for Unit 22 & 23 subsistence hunts. See permit for details.

How many animals do you see in Fig. 6?
- Know what is behind your target before you shoot.
- Muskox cluster together as herd animals making separate individuals hard to see.
- Calves, yearlings, and 2-year-olds often stand behind larger animals for protection.
- Take your time! The group will eventually disperse giving you a clear shot.
