JUSTIFICATION:

Aerial surveys conducted during 2006-2010 in this area indicate a significant decline in goat numbers. The following are survey results by year: 2006 (122 goats), 2007 (66 goats), 2008 (57 goats), 2009 (48 goats). In 2010, two surveys resulted in 6 and 12 goats, respectively. The survey conditions during the 2010 flights are considered poor; however, the low number of goats detected suggests the areas' goat numbers remain depressed. In 2009 and 2010 the department closed this area by EO prior to the season due to conservation concerns, and believes it is necessary to again close the season in 2011 prior to any harvest. Any harvest of goats in this area could have long term negative impacts on the health of this goat herd.
