

Prince William Sound Priority Stream Maps

These maps identify the general locations of priority salmon streams in Prince William Sound (PWS). Latitude and longitude location information for these streams may be found in the accompanying 2017 Priority Stream List.

The Priority Stream List is composed of a subset of salmon streams found in the Anadromous Waters Catalog (AWC). The list includes some of the largest producers of salmon in PWS as well as those streams that are part of the aerial survey program. Please refer to the AWC for a complete list of PWS salmon streams. The closure of salmon streams not on the priority list may be suspended temporarily by Emergency Order to facilitate harvest of surplus wild and hatchery fish. Closed areas defined by existing markers and regulation remain in effect, as stated in 5 AAC 24.350 and 5 AAC 39.290.

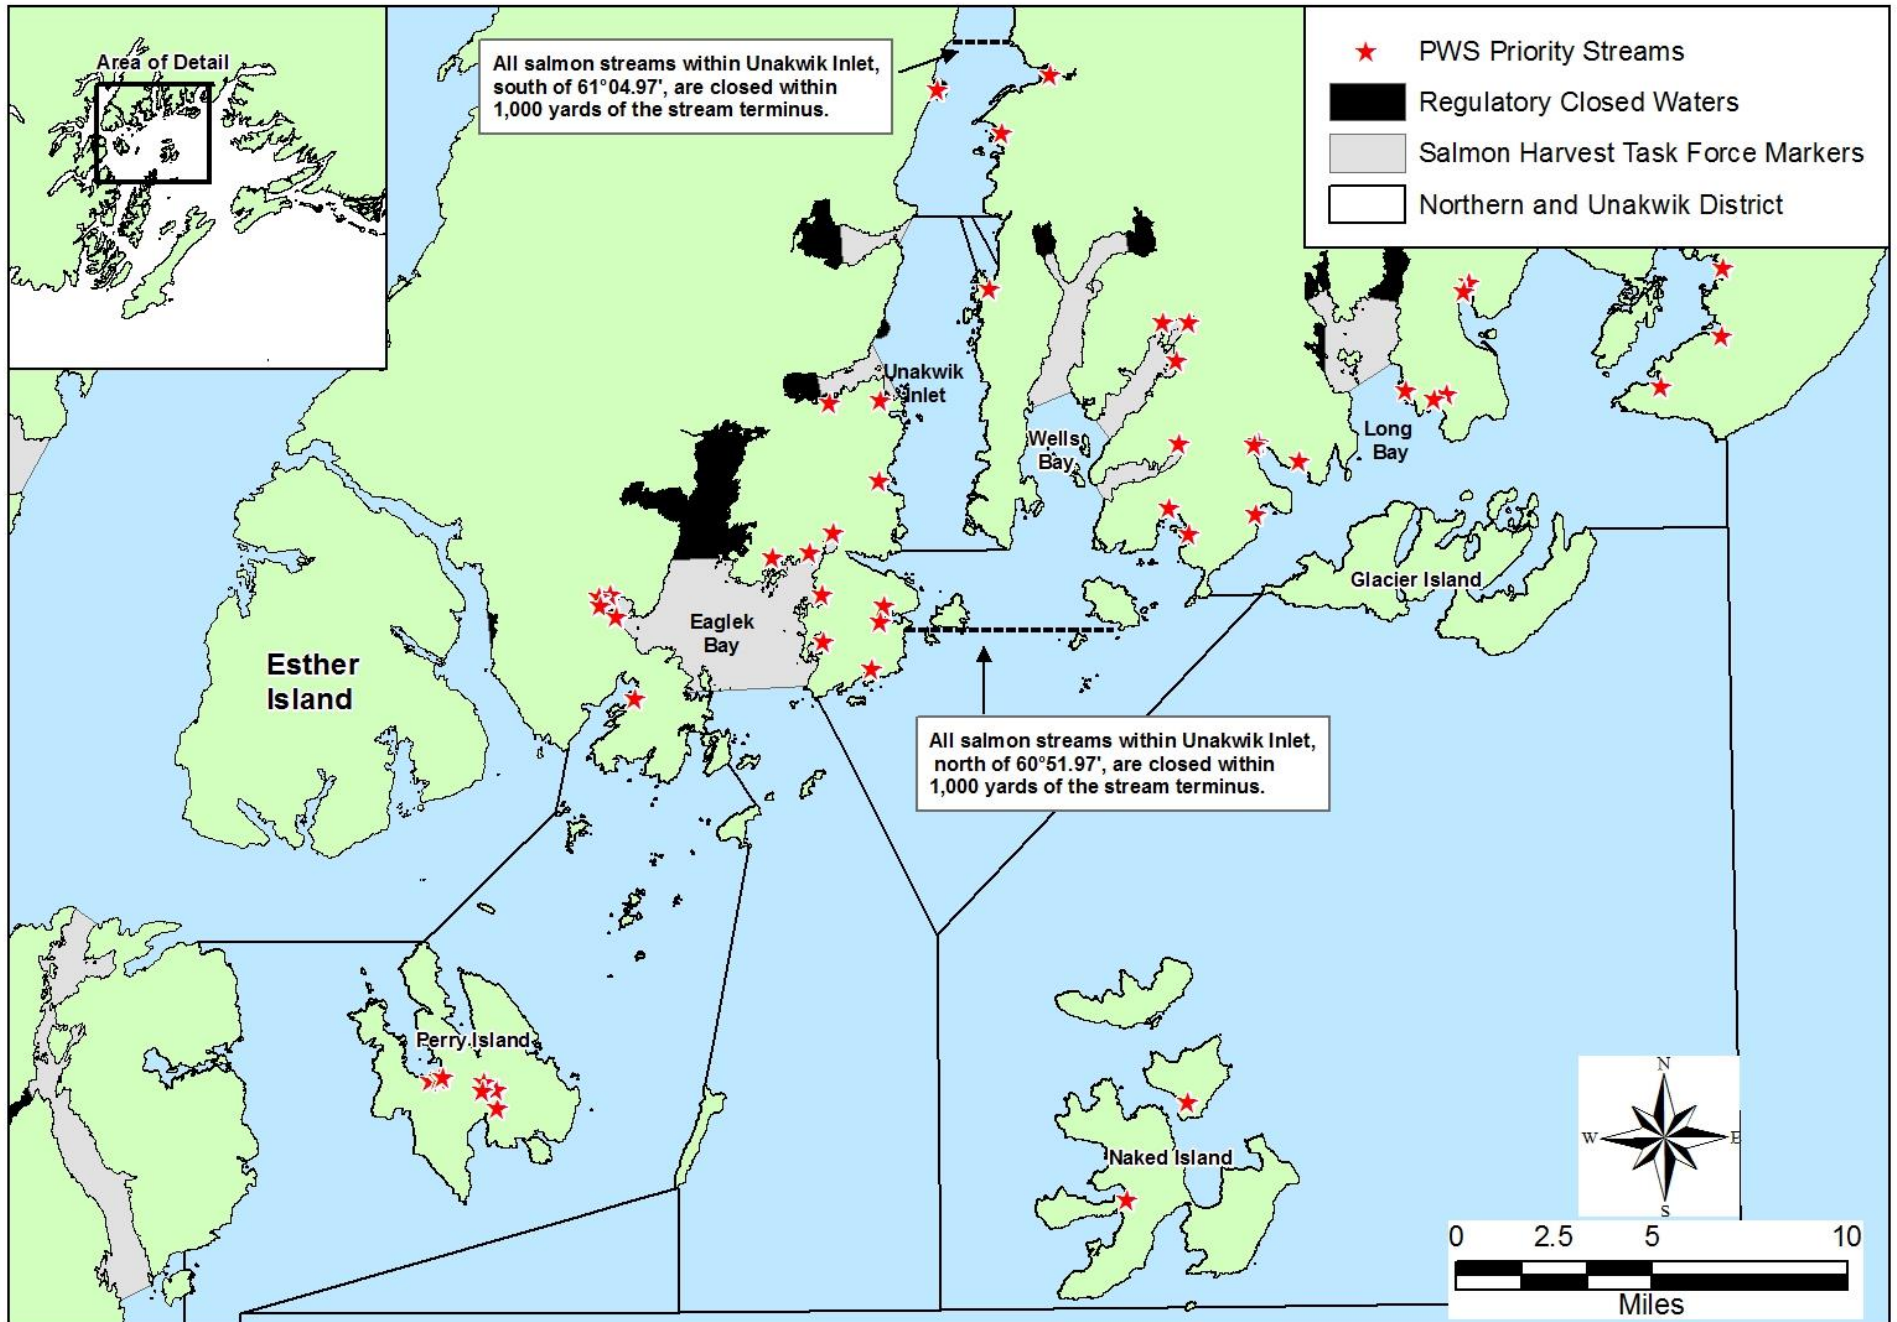

This list will be implemented by Emergency Order with an associated announcement that clearly identifies open and closed waters.
