1.0 Executive Summary

1.1 Introduction

This Annual Management Plan (AMP) plan is prepared to fulfill the requirements of 5 AAC 40.840. This plan must organize and guide the hatchery's operations, for each calendar year, regarding production goals, broodstock development, and harvest management of hatchery returns. Egg take through release details are included in planning for succeeding calendar years. Inseason assessments and project alterations by Cook Inlet Aquaculture Association (CIAA) or Alaska Department of Fish and Game (ADF&G) may result in changes to this AMP in order to reach or maintain program objectives. CIAA will notify the ADF&G private nonprofit (PNP) hatchery program coordinator in a timely manner of any departure from the AMP. The ADF&G PNP coordinator will advise as to whether an amendment, exception report, or other action is warranted. No variation or deviation will be implemented until an AMP amendment has been approved or waived by both the department and CIAA. This policy applies to all hatchery operations covered under the AMP.

1.2 New This Year: (production, harvest management, culture techniques, etc.)

1.2.1 Facility Changes

There are no changes to the facility planned for 2023.

1.2.2 Production Changes

- Bear Lake Sockeye Salmon
 - BY2021 resulted in enough broodstock to obtain sufficient eggs for the 2023 smolt program.
 - BY23 female broodstock will be treated with erythromycin as a BKD preventative.
- English Bay Lakes Sockeye Salmon (Second Lake)
 - CIAA is not planning to collect eggs from the English Bay Lakes system.
- Hidden Lake Sockeye Salmon
 - CIAA is not planning to collect eggs from Hidden Lake in 2023.
 - CIAA does not plan to stock Hidden Lake in 2023.

- Shell Lake Sockeye Salmon
 - No production changes.
- Lower Cook Inlet Lakes Sockeye Salmon (EBL stock)
 - No production changes.
- Bear Lake Coho Salmon
 - CIAA may keep fry in excess of the 450,000 stocking goal to rear to the smolt stage for release to Bear Creek.

1.2.3 Fish Culture Changes

• Until an alternative site for the LCI sockeye program is located, for the eggs allocated to terminal fisheries (Hazel, Leisure, and Kirschner lakes), the mating cross will be 2 females to 1 male. This will reduce the number of fish required for broodstock and reduced the density in the lensing bag. For the eggs allocated to Tutka smolt production the mating cross will be 1 female:1 male as these fish will be used for future broodstock.

1.2.4 Evaluation Changes

- Hidden Lake Sockeye Salmon
 - Pending discussions with USFWS, CIAA is not planning to perform any straying analysis outside of Hidden Lake. CIAA sampled outside of Hidden Lake and no strays were found. This fulfilled the sampling requirements of the Hidden Lake Operational Plan.
 - Otoliths will be collected in Hidden Lake to assess spawning fidelity.
 - CIAA plans to continue to monitor outmigration and escapement in 2023.
- Shell Lake Sockeye Salmon
 - CIAA will operate a smolt trap in Shell Creek to estimate the smolt outmigration from Shell Lake in 2023.
 - CIAA will conduct aerial surveys of Shell Creek to enumerate the adult salmon return to Shell Lake.

1.2.5 Projected Return and Cost-recovery (CR) Licensing Changes

- Hidden Lake Sockeye Salmon
 - \circ No change.
- Bear Lake, Kachemak, Kamishak, & Tutka Sockeye Salmon
 - To meet the 2023 cost recovery goal, CIAA anticipates a significant cost recovery harvest in Resurrection Bay/Bear Lake, Kachemak, Kamishak, and Tutka.
- Port Graham Bay Sockeye Salmon
 - No sockeye salmon adults are expected to return in 2023.

1.3 Fish Transport Permits (FTPs) or Amendments Needed This Year

• CIAA plans to apply to renew the following FTPS that expire 12/31/2023:

- 18A–0031 which allows for the collection of 6,520,000 green sockeye eggs to be taken at Tutka Bay Lagoon Hatchery for Incubation at Trail Lakes Hatchery.
- 11A–0062 which allows for the transfer and release of 1,536,000 sockeye smolt to Resurrection Bay.
- 11A–0077 which allow for the transfer of 5000 adult sockeye from Port Graham Hatchery to Tutka Bay Lagoon Hatchery to be used as broodstock.
- 08A-0069 which allows for the transfer and release of 2,400,000 sockeye fry from Trail Lakes Hatchery to Bear Lake.
- 08A-0090 which allows for the collection of 6,000,000 green sockeye eggs from Bear Lake for incubation at Trail Lakes Hatchery.
- 08A-0113 which allows for the transport and release of 450,000 coho fed fry from Trail Lakes Hatchery to Bear Lake.
- CIAA does not plan to renew the following FTPs that expire 12/31/23:
 - 11A-0076 which allows for the collection of 6,520,000 green sockeye eggs from Port Graham Bay to be incubated at Trail Lakes Hatchery.

New TLH FTPs needed in 2023 are: No new FTPs are required.

1.4 Expected Return

The following assumptions are used to estimate the number of eggs to be collected in 2023.

Species	Stock	Stocking Location	Stocking Goal	Eyed-to- Smolt Mortality	Fry	Green-to- Eyed Mortality	# of Eggs to Collect	Comments
	Hidden Lk	Hidden Lk	0		0.0%	0.0%	0	
	Bear Lk	Bear Lk	1,200,000		7.0%	15.0%	1,518,000	
	Bear Lk	Res. Bay	1,000,000	39.0%		15.0%	1,929,000	
	*English Bay (Tutka)	Leisure Lk	1,000,000		15.0%	13.0%	1,352,000	
Sockeye	*English Bay (Tutka)	Hazel Lk	1,250,000		15.0%	13.0%	1,690,000	
Salmon	*English Bay (Tutka)	Kirschner Lk	250,000		15.0%	13.0%	338,000	
	*English Bay (Tutka)	Tutka Lagoon	1,000,000	40.0%		15.0%	1,961,000	
	English Bay Lk (Second Lake)	Second Lk	0		0.0%	0.0%	0	
	Shell Lake	Shell Lake	0	0.0%		0.0%	0	
Coho	Bear Lk (Fry)	Bear Lk	450,000		5.0%	5.0%	499,000	Green to eyed includes BKD culls
Salmon	Bear Lk (Smolt)	Bear Cr.	50,000	20.0%		5.0%	66,000	Green to eyed includes BKD culls

* English Bay (Tutka) are adult sockeye salmon returns to Tutka Bay Lagoon and not broodstock collected from Second Lake.

Species	Location	Stock	Fry-to-	Fry-to-Adult	Smolt-to-
			Smolt Survival		Adult Survival
			Survival		
Sockeye	Bear Lake	Bear Lake	22 %		10%
Sockeye	Res. Bay	Bear Lake			4%
Sockeye	Kirschner	English Bay		12%	
Sockeye	Hazel Lake	English Bay		3%	
Sockeye	Leisure Lake	English Bay		3%	
Sockeye	Hidden Lake	Hidden Lake			10%
Sockeye	Shell Lake	Shell Lake			10%
Sockeye	Tutka Bay	English Bay			10%
	Lagoon				
Coho	Bear Lake	Bear Lake		1.5%	
Coho	Bear Creek	Bear Lake			10%

The following assumptions, based on past survivals, are used to determine this year's estimated adult sockeye and coho returns expected from sockeye and coho fry and smolt released in previous years.

Based on the above assumptions, the table below summarizes the expected adult return for 2023.

1.5 Production Summary

Trail Lakes Hatchery

1.6 Permitted Capacity

TLH operates under Private Nonprofit Permit #27 issued in 1988 and has a permitted capacity of 30.0 million sockeye salmon eggs, 6.0 million coho salmon eggs, and 4.0 million king salmon eggs. The FTPs under which CIAA operates TLH programs are as follows:

FTP #	Donor Stock/ Ancestral Stock	Action	Expiration Date	Maximum #, Life Stage	Transport from, to
08A-0091	Hidden Lk/ Hidden Lk	Egg take, incubation	6/30/2024	2,200,000 green eggs	Hidden Lk to TLH

1.7 Project Evaluation

- Hidden Lake Sockeye Salmon
 - CIAA will enumerate smolt and adult escapement.
 - CIAA will collect limnology samples.
 - CIAA will collect up to 1,000 samples at the weir for otolith analysis for hatchery/wild stock contribution as well as age composition.
 - CIAA will collect up to 750 otoliths for spawning fidelity study as described in the Special Use Permit.
- Bear Lake Sockeye Salmon
 - CIAA will collect up to 1,000 heads for otolith dissection from the processing plant to analyze the returns contributing to the harvest from the net pen complex versus the lake. Samples will be collected randomly throughout the fishery.
 - CIAA will enumerate smolt and adult escapement.
 - Kidney samples will be taken to collect BKD data.
 - CIAA will collect limnology samples during the open water season.
 - The lake fertilization project at Bear Lake is suspended for 2023.
 - All fish stocked will be thermally otolith-marked.
- Shell Lake Sockeye Salmon
 - CIAA will enumerate smolt and adult escapement.
 - CIAA will actively harvest northern pike from the lake.
- Tutka Bay Sockeye Salmon (EBL)
 - Adult sockeye salmon returns will be estimated through harvest records and fish used for broodstock.
 - CIAA will collect up to 400 otoliths from the cost recovery or common property harvests to determine age characteristics.
 - All fish will be thermally otolith-marked.
- Lower Cook Inlet Lakes
 - Adult fish returns will be estimated through harvest records and ADF&G surveys.
 - Leisure Lake fertilization suspended for 2023.
 - All fish stocked will be thermally otolith-marked. CIAA anticipates collecting otolith samples from fish caught in the common property and cost recovery fisheries.

- CIAA will assist ADF&G in the analysis of adult sockeye salmon otoliths collected from Kamishak and Kachemak Bay area fisheries.
- Bear Lake Coho Salmon
 - Those fish used for egg collection will be family tracked for BKD disease screening.
 - CIAA will perform enumeration of smolt and adult escapement.
 - All fish will be thermally otolith-marked.
 - CIAA may collect heads for otolith dissection from the processing plant to analyze the returns contributing to the Seward Chamber of Commerce derby harvest.

2.0 Bear Lake Coho Salmon

2.1 Purpose and History

The coho salmon enhancement project was initiated at Bear Lake near Seward in 1962; CIAA assumed operation of the project in 1989 and expanded it to include stocking of sockeye salmon in 1990.

The primary intent of the enhancement programs at Bear Lake is, through lake fertilization and stocking of both coho and sockeye salmon, to maximize sockeye salmon production without causing a net loss of historical coho salmon smolt production. A secondary intent of the Bear Lake enhancement program is to produce sufficient coho salmon eggs to service other enhancement projects.

Historically, CIAA has provided additional coho salmon smolt for release to Bear Creek (Resurrection Bay), Kachemak Bay at the Nick Dudiak Enhancement Lagoon on the Homer Spit, Seward Lagoon, Alaska Sealife Center, and Seldovia. Currently the coho salmon smolt program has been scaled down to the occasional release at Bear Creek and/or Seward Lagoon if excess fry are available from the fry program or through a contract with the Seward Chamber of Commerce.

2.2 Operational Plan

2.2.1 Egg-take Goal/Brood Sources

Broodstock and eggs are collected from Bear Creek to support CIAA's Bear Lake coho salmon program. CIAA also assists with collection of broodstock and eggs for ADF&G coho salmon projects. The ADF&G coho salmon program is described in the William Jack Hernandez Sport Fish Hatchery AMP.

CIAA's egg-take goal is 565,000 coho salmon green eggs to achieve a 450,000 spring fry stocking goal at Bear Lake in 2024 and a 50,000 smolt stocking goal at Bear Creek in 2025. In addition to CIAA's goal, ADF&G has an egg collection goal of approximately 330,000 eggs.

Broodstock requirements for CIAA's egg target goal are 170 females and 170 males (340 adult coho salmon). In addition to CIAA's requirements, broodstock requirements for ADF&G egg target goal are 100 females and 100 males (200 adult coho salmon) for a combined total broodstock goal of 540 adult coho salmon.

CIAA Broods	tock Requirer	nents

Excess Males/Roe Recovery	0%	5%
Mortalities	2%	
# Females		100
# Males		100
Total Broodstock		200

2.2.2 Egg Take, Transport of Eggs

Coho salmon broodstock will be collected at the Bear Lake weir and placed into raceways until spawning. Gametes will be collected and eggs will be fertilized on site at 1.5:1 female to male ratio. Gametes will remain separate for BKD family tracking. Eggs will be allowed to water harden for 1 to 2 hours before being transported back to TLH.

2.2.3 Incubation Plans

Eggs will be transferred to the hatchery and placed into vertical Heath stacks until they reach the eyed stage. Any BKD positive eggs will be culled. The healthy eggs will be shocked, picked, and inventoried before being placed into Kitoi boxes for otolith thermal marking.

2.2.4 Rearing and Release Plans

This year's anticipated releases from eggs collected in 2020 and 2021.

Stock	Bear La	Bear Lake										
Species	Coho	Coho										
Brood Year	Life Stage	Release Site	Release Goal	Mark Type	Percent marked	Hatch code						
21	Smolt	Bear Cr	55,000	Otolith	100%	6,2H						
22	Fry	Bear Lake	450,000	Otolith	100%	2,2H						

Previous brood years that will remain in culture during the entire calendar year:

Program Name	Brood	Number Live	Release	Release
	Year	(Mar, 23)	goal	Date
Bear Lake Coho Salmon	2022	18,950	16,500	Spring 2024

2.3 Donor Stock Management

2.3.1 Management Strategies

In 2013, the Alaska Board of Fish established 5 AAC 21.373 Trail Lakes Salmon Hatchery Management Plan. This plan sets in regulation the Bear Lake Special Harvest Area. In addition, 5 AAC 21.376 Resurrection Bay Salmon Management Plan also provides guidance to ADF&G with regards to fisheries management in the Resurrection Bay North Subdistrict.

2.3.2 Escapement Requirements

All returning Bear Lake coho salmon in excess of the minimum inriver return may be used for broodstock. There are no management strategies created in this plan specifically designed to utilize surplus hatchery-produced fish returning to Bear Lake for cost-recovery harvest.

The minimum inriver return for Bear Lake is:

Goal	Escapement
Minimum inriver	300
return	

2.4 Evaluation Plans

CIAA will operate a smolt trap in Bear Creek to enumerate and describe the smolt outmigration from Bear Lake. A weir in Bear Creek will be used to enumerate and describe adult escapement to Bear Lake.

Limnological samples from Bear Lake will be collected and analyzed.

The lake fertilization project at Bear Lake will be suspended for 2023.

CIAA will perform family tracking and sample all females used for gamete collection for BKD analysis.

All fish will be thermally otolith-marked.

3.0 Resurrection Bay and Bear Lake Sockeye Salmon

3.1 Purpose and History

The purpose of the sockeye salmon project was to create and maintain a commercial sockeye salmon fishery without decreasing coho salmon production from Bear Lake or conflicting with the Resurrection Bay recreational fishery. In 1993, CIAA added a sockeye smolt program for the purpose of providing sockeye salmon returns for corporate cost-recovery licensing.

3.2 Operational Plan

3.2.1 Egg-take Goal/Brood sources

Broodstock and eggs for the Resurrection Bay and Bear Lake stocking projects are collected from escapement at Bear Lake.

For 2023, CIAA's egg target goal is 3.5 million green sockeye salmon eggs in order to achieve a stocking goal of 1.2 million spring fry to Bear Lake in 2024 and 1 million smolt to Resurrection Bay in 2025. A total of 2,942 adult sockeye salmon are required to meet this target (1,471 females; 1,471 males). To assure that there are 2,942 brood fish available, CIAA must pass brood fish plus an additional 958 fish (3,900 fish broodstock total). The SEG range for this system is 700–8300 fish. Therefore, CIAA expects a minimum of 4,600 fish (2300 females; 2300 males) and a maximum of 12,200 fish (6,100 females; 6,100 males) will be passed into the lake from the weir.

CIAA Broodstock Requirements					
Stock		Bear Lake			
Species		Sockeye			
# Green Eggs		3,500,000			
Fecundity		2,800			
F:M Ratio		1:1			
Inviable	10%				
Excess Males/Roe Recovery	0%	15%			
Mortalities	5%				
# Females		1,471			
# Males		1,471			
Total Broodstock		2,942			

3.2.2 Egg Take, Transport of Eggs

Broodstock will be captured between a temporary double picket weir and at the lake shore with a beach seine when necessary. Captured broodstock will be placed into holding pens when ripe. Carcasses (both males and female) will be discarded back into Bear Lake's nutrient enrichment zone. Gametes will remain separate in iced coolers until delivery to TLH.

3.2.3 Incubation Plans

Eggs will be fertilized at a 1:1 female to male ratio and allowed to sit in an Ovadine® solution for 1–2 hours for water hardening before being placed into incubators. Eggs will be shocked, picked, and inventoried. Live eyed eggs will be placed back into the modified Kitoi boxes for otolith thermal marking and will remain there until emergence.

3.2.4 Rearing and Release Plans

The table below describes the anticipated releases in 2023 from eggs collected in 2021 and 2022.

Stock	Bear La	ake				
Species	Sockey	re				
Brood Year	Life Stage	Release Site	Release Goal	Mark Type	Percent marked	Hatch code
21	Smolt	Res. Bay	1,000,000	Otolith	100%	3,3,2H
22	Fry	Bear Lake	1,200,000	Otolith	100%	4H

Previous brood years that will remain in culture during the entire calendar year:

Program Name	Brood Year	Number Live (Mar,23)	Release goal	Release Date
Resurrection Bay Sockeye Salmon	2022	1,068,000	900,000	Spring 2024

3.3 Donor Stock Management

3.3.1 Management Strategies

Bear Lake sockeye salmon traditionally return from late-May to early-July with most escapement occurring mid-June. Sockeye salmon returns to Bear Lake are harvested primarily in the Resurrection Bay commercial purse seine and hatchery cost-recovery licensed fisheries and secondarily in the Resurrection Bay recreational fishery. Specific management actions are guided by language in 5AAC 21.376 Resurrection Bay Salmon Management Plan.

3.3.2 Escapement Requirements

Goal	Escapement				
	Female	Male	Range		
SEG			700-8,300		
Broodstock	1,950	1,950	3,900		
Weir passage range to achieve brood goal	2,300- 6,100	2,300- 6,100	4,600– 12,200		

Management of sockeye salmon passage by sex to Bear Lake is noted in the table below.

Sockeye salmon will be passed into the lake throughout the course of the run using historic run timing as provided by ADF&G.

If the escapement goal is not achieved and harvest restrictions have not been placed on common property and cost-recovery fisheries, and CIAA can project the egg-take goal will not be achieved, CIAA will request ADF&G allow CIAA to collect eggs from an alternative broodstock source.

3.4 Evaluation Plans

CIAA will operate a smolt trap in Bear Creek to enumerate and describe smolt outmigration from Bear Lake. A weir in Bear Creek will be used to enumerate and describe adult escapement to the creek and lake.

Limnological samples from Bear Lake will be collected and analyzed.

The lake fertilization at Bear Lake will be suspended in 2023.

CIAA will collect otoliths from sockeye salmon captured in the cost recovery licensing/common property fisheries to determine the contribution from the net pen and the lake stocking program.

All fish will be thermally otolith-marked.

4.0 Hidden Lake Sockeye Salmon

4.1 Purpose and History

ADF&G initiated this project in 1976; CIAA assumed operation of the project after 1991.

Hidden Lake has the potential for increased sockeye salmon production because the natural spawning area is limited and/or egg to fry survival is poor. The purpose of this project is to enhance the Hidden Lake sockeye salmon return for the common property fishery.

The goal of the project is a 4-year floating average adult sockeye salmon escapement of 30,000 fish. The average adult escapement from 2016 through 2019 was 26,899.

4.2 Operational Plan

Note* Calculations based off 2012-2017 Operational plan, extended to 2018. To be updated with 2019-2023 five-year operational plan Hidden Lake Sockeye Program, anticipated BOD approval 2022.

4.2.1 Egg-take Goal/Brood Sources

CIAA does not plan to conduct an egg take at Hidden Lake in 2023.

4.2.4 Rearing and Release Plans

4.3 Donor Stock Management

4.3.1 Management Strategies

Sockeye salmon returns to Hidden Lake (Kenai River) contribute to mixed species/mixed stock set and drift gillnet commercial, subsistence, and personal use fisheries in the Central District and recreational fisheries in the Kenai River system.

Specific management actions are governed by regulations established by the BOF. No specific management strategies are applied to ensure sufficient hatchery broodstock at Hidden Lake and no management strategies are currently specifically designed to harvest surplus hatchery-produced fish returning to Hidden Lake. Fish sacrificed for otolith processing will be sold or donated to charity.

4.3.2 Escapement Requirements

The sockeye salmon return per USFWS Special Use Permit to Hidden Lake is:

Goal	Escapement
Minimum inriver return	8,000
Desired inriver return	30,000

4.4 Evaluation Plans

CIAA will operate a smolt trap in Hidden Creek to enumerate and describe the smolt outmigration from Hidden Lake. A weir in Hidden Creek will be used to enumerate and describe adult escapement to the creek.

CIAA will collect otolith samples from Hidden Lake during spawning to assess spawning fidelity. The details of the sampling program are described in the Special Use Permit.

Limnological samples from Hidden Lake will be collected and analyzed during the open-water season.

5.0 Packers Lake Sockeye Salmon

5.1 Purpose and History

ADF&G initiated this project in 1973; CIAA assumed operation of the project in 1980 and expanded it to include nutrient enrichment in 1983 and stocking in 1988. The Packers Lake fry release and nutrient enrichment portions of the project were suspended in April 1998.

5.2 Operational Plan

5.2.1 Egg-take Goal/Brood Sources

No activities planned.

5.4 Evaluation Plans

CIAA will maintain a flow control structure at the lake's outlet to assist the migration of adult sockeye salmon into the lake.

6.0 Lower Cook Inlet Sockeye Salmon (English Bay Lakes stock)

6.1 Purpose and History

In December 2003, the Tustumena Lake sockeye salmon enhancement project was terminated and the egg source for the LCI lakes sockeye salmon enhancement project was eliminated. Eggs were collected from Hidden Lake as an interim measure in order to continue the LCI lakes enhancement project. To develop a future brood source, a remote smolt release project was initiated at Tutka Bay Lagoon in 2005.

Although sockeye salmon returns to Tutka Bay Lagoon achieved numerical expectations, Hidden Lake stock was not a good choice for release to Tutka Bay Lagoon for broodstock or licensed cost-recovery harvest purposes. While the fish cultured well in the hatchery and returns slightly exceeded projections, they have not served well as a broodstock because the spawning time of Hidden Lake stock returning to Tutka Bay Lagoon was delayed by two to four weeks, the fish have been smaller than expected, and the value of the cost-recovery harvests have not met expectations.

For this reason, CIAA collected EBL stock to develop a return of this stock at Tutka Bay Lagoon to supply the broodstock necessary to maintain the Hazel/Leisure/Kirschner lakes stocking program and licensed cost-recovery/common property harvests at Tutka Bay.

Adult sockeye salmon returns of the English Bay Lake stock to Tutka Bay Lagoon are expected to provide sufficient broodstock to meet the egg target goals (6,520,000 green eggs) for the stocking programs at Tutka Bay Lagoon, and the Lower Cook Inlet lakes (Kirschner, Hazel, Leisure).

Adult sockeye will be captured from Tutka Bay Lagoon and placed in lensing bags for ripening. Staff from TBLH will perform the egg takes and ship the gametes via aircraft to Trail Lakes Hatchery for fertilization, incubation, and rearing.

6.2 Operational Plan

6.2.1 Egg-take Goal/Brood Sources

Adult sockeye salmon returns of the EBL stock to Tutka Bay Lagoon are expected to provide sufficient broodstock to meet the egg target goals for the stocking programs at Tutka Bay Lagoon/Port Graham, and the Lower Cook Inlet lakes (Kirschner, Hazel, Leisure) (5,900,000 green eggs).

A total of 5,104 adult sockeye salmon are required to meet the egg-take goal (3,074 female; 2,032 male).

CIAA Broodstock Requirements			CIAA Broodstock Requirements		
Stock		English Bay (Tutka)	Stock		English Bay (Tutka
Species		Sockeye (Smolt)	Species		Sockeye (Fry)
# Green Eggs		1,900,000	# Green Eggs		4,000,000
Fecundity		2,400	Fecundity		2,400
F:M Ratio		1	F:M Ratio		2
Inviable	8%		Inviable	8%	
Excess Males/Roe Recovery	2%	20%	Excess Males/Roe Recovery	2%	20%
Mortalities	10%		Mortalities	10%	
# Females		990	# Females		2,084
# Males		990	# Males		1,042
Total Broodstock		1,980	Total Broodstock		3,126

6.2.2 Egg Take, Transport of Eggs

Adult sockeye salmon will be captured from Tutka Bay Lagoon and placed into a freshwater lensing bag. Hatchery staff will perform the egg takes and ship the gametes in iced coolers via aircraft to Trail Lakes Hatchery for fertilization, incubation, and rearing.

6.2.3 Incubation Plans

For eggs allocated to smolt production at Tutka Bay Lagoon, eggs will be fertilized at a 1:1 female to male ratio. For eggs allocated to fry production at Hazel, Leisure and Kirschner lakes, eggs will be fertilized at a 2:1 female to male ratio. Newly fertilized eggs will be placed into Ovadine® solution (100 ppm) and allowed to water harden for 1–2 hours, before being placed into Kitoi boxes. Once the eggs have reached the eyed stage, they will be shocked, picked, and inventoried. All eggs will be thermally otolith marked.

6.2.4 Rearing and Release Plans

The table below describes the anticipated releases for 2023 from eggs collected in 2021 and 2022.

Species	Sockey	e				
Stock	English	n Bay				
Brood Year	Life Stage	Release Site	Release Goal	Mark Type	Percent marked	Hatch code
22	Fry	Hazel Lake	1,000,000	Otolith	100%	4,1,3H
22	Fry	Leisure Lake	1,000,000	Otolith	100%	1,3H
22	Fry	Kirschner Lake	250,000	Otolith	100%	7H
21	Smolt	Tutka Lagoon	720,000	Otolith	100%	3,5H

Program Name	Brood Year	Number Live (Mar, 22)	Number to release	Release Date
Lower Cook Inlet Sockeye				
(Tutka Smolts)	2022	1,300,000	900,000	Spring 2024

Previous brood years that will remain in culture during the entire calendar year:

6.3 Donor Stock Management

6.3.1 Management Strategies

The Division of Commercial Fisheries Area Management Biologist (AMB), in consultation with the hatchery operator, will employ management strategies within waters of the Tutka Bay SHA and other hatchery subdistricts listed in 5 AAC 21.373 Trail Lakes Hatchery Salmon Management Plan to ensure achievement of broodstock goals for TLH, as well as allow for an orderly common property opportunity to harvest fish surplus to hatchery requirements.

Sport fisheries will be managed in accordance with regulations as provided in 5 AAC 47– 5 AAC 75. Emergency orders (EOs) may be issued to liberalize or restrict sport fisheries based on achievement of broodstock goals.

6.3.2 Escapement Requirements

Not required.

6.4 Evaluation Plans

CIAA and ADF&G will determine total return to Tutka Bay through broodstock enumeration and commercial/cost recovery harvests as supplied by fish tickets.

All fish will be thermally otolith-marked.

The fertilization program at Leisure Lake will be suspended in 2023.

CIAA may collect otolith samples from fish caught in the common property and cost recovery fisheries.

7.0 Shell Lake Sockeye Salmon

7.1 Purpose and History

From 2006 through 2011, CIAA monitored sockeye salmon returns to Shell Lake. Similarly, CIAA monitored sockeye salmon smolt migration from Shell Lake starting in 2007. Over this time period, the number of fish returning and migrating from the lake has decreased substantially, with only 17 sockeye salmon smolt being recorded in 2011. In 2007, CIAA conducted sampling to determine the average fecundity and reproductive potential of the sockeye salmon returning to Shell Lake. Based on this information, the highest egg-to-smolt survival was in BY07 when 0.09% of the potential eggs migrated out as smolt (2009/2010).

While the actual reasons for the decline in both adult return and smolt migration numbers are still being investigated, it is apparent that if something is not done immediately to conserve the sockeye salmon, there is a risk of multiple year class failures at Shell Lake, which could lead to extirpation of sockeye salmon from that system. For that reason, CIAA undertook a rehabilitation project in 2012, which aggressively removed northern pike and collected gametes from returning adult sockeye in order to conserve the genetic lineage. Additionally, disease screening revealed the presence of two microsporidian parasites which may be negatively impacting the sockeye salmon population at Shell Lake. In 2014, 80,000 sockeye salmon smolt were released into Shell Lake as part of the rehabilitation effort. In 2018 46,000 smolt were stocked into Shell lake, 32,606 sockeye salmon smolt were enumerated passing through the smolt trap in 2018.

CIAA will continue the smolt migration counts in 2023, as well as enumerate the returning sockeye salmon. CIAA will also continue to harvest northern pike from the system.

7.2 Operational Plan

7.2.1 Egg-take Goal/Brood Sources

No egg take planned in 2023.

7.3 Donor Stock Management

7.3.1 Management Strategies

The number of returning adult salmon to Shell Lake will be estimated using aerial counts.

7.4 Evaluation Plans

CIAA will perform smolt counts on migrating salmon via fyke net.

CIAA will actively remove northern pike from Shell Lake using hook and line and gillnetting between mid-May and mid-September.

8.0 Harvest Management

8.1 Cost-recovery Harvest Plan

CIAA funds the cost of operating TLH, TBLH, PGH, Eklutna Salmon Hatchery (ESH) and associated field projects by licensing for harvest a portion of the fish returning to the hatcheries' release sites. CIAA will begin cost recovery in Resurrection Bay/Bear Lake followed by Leisure/Hazel Lake sockeye, Kirschner Lake sockeye, Tutka Bay Lagoon sockeye and pink salmon, and Port Graham Bay pink salmon until the cost recovery goal is met. The table below describes anticipated returns and revenue to the special harvest areas (SHAs) in which cost recovery licensing is possible in 2023.

CIAA 2023 Cost Recovery Target				
SHA/AREA	Financial Target			
Bear Lake/Resurrection Bay Sockeye	1,100,000			
Kirschner Lake Sockeye	200,000			
Tutka Bay (sockeye and pink)	2,700,000			
Leisure/Hazel Sockeye	\$175,000			
Port Graham Pink	\$37,000			

The Division of Commercial Fisheries Area Management Biologist (AMB), in consultation with the hatchery operator, will employ management strategies within waters of the TLH SHAs as well as other hatchery subdistricts listed in 5AAC 21.373 *Trail Lakes Hatchery Salmon Hatchery Management Plan* that ensure achievement of corporate escapement broodstock requirements for TLH, as well as to allow for an orderly common property fishery opportunity to harvest fish surplus to hatchery requirements. In addition to weekly updates that provide current levels of brood and cost recovery harvests to the Homer ADF&G office, CIAA will submit written hatchery sub-district management recommendations to the AMB with clear justifications as to how the recommendations support achieving cost recovery and/or broodstock collection goals. Each recommendation, in the form of a brief email, will include but not be limited to current cost recovery and brood harvest data, SHA estimates of fish in the water, as well as actual and anticipated run entry, and actual and anticipated cost recovery and brood harvest progress. SHA estimates may include the number of fish estimated in Bear Creek, as well as number of fish within Tutka Lagoon outside of holding pens and in the creek.

8.2 Special Harvest Areas

8.2.1 Kirschner Lake SHA

8.2.1.1 Area Definition

The Kirschner Lake SHA (Figure 1) is defined in 5AAC 21.373 Trail Lakes Salmon Hatchery Management Plan as the marine waters of the Bruin Bay Subdistrict in the Kamishak Bay District northwest of a line connecting 59° 25.17′ N. lat., 153° 50.50′ W. long. and 59° 23.17′ N. lat., 153° 56.90′ W. long.

8.2.1.2 Fishery Management

The Division of Commercial Fisheries AMB, in consultation with the hatchery operator, shall manage the Kirschner Lake Section of the Bruin Bay Subdistrict including the SHA to achieve corporate escapement goals in a timely and orderly manner.

Sport fisheries will be managed in accordance with regulations as provided in 5 AAC 47– 5 AAC 75. Emergency orders may be issued to liberalize or restrict sport fisheries based on achievement of broodstock goals.

8.2.2 China Poot and Hazel Lake SHA

8.2.2.1 Area Definition

The China Poot and Hazel Lake SHA (Figure 2) is defined in 5AAC 21.373 Trail Lakes Salmon Hatchery Management Plan as the marine waters of the China Poot Bay Subdistrict in the Southern District inshore of, and enclosed by, a line connecting 59° 34.66' N. lat., 151° 19.27' W. long., then to 59° 35.08' N. lat., 151° 19.77' W. long., then to 59° 33.09' N. lat., 151° 25.22' W. long., and then to 59° 32.84' N. lat., 151° 24.90' W. long.

8.2.2.2 Fishery Management

The Division of Commercial Fisheries AMB, in consultation with the hatchery operator, shall manage the China Poot Bay Subdistrict in the Southern District including the SHAs to achieve corporate escapement goals in a timely and orderly manner.

Sport fisheries will be managed in accordance with regulations as provided in 5 AAC 47 – 5 AAC 75. EOs may be issued to liberalize or restrict sport fisheries based on achievement of broodstock goals.

8.2.3 Tutka Bay SHA

8.2.3.1 Area Definition

The Tutka Bay SHA (Figure 3) is defined in 5AAC 21.373 Trail Lakes Salmon Hatchery Management Plan as the marine waters of Tutka Bay Subdistrict in the Southern District southeast and shoreward of a line from 59° 30.23' N. lat., 151° 28.23' W. long. to 59° 28.63' N. lat., 151° 30.37' W. long., including Tutka Bay Lagoon.

8.2.3.2 Fishery Management

The Division of Commercial Fisheries AMB, in consultation with the hatchery operator, shall manage the Tutka Bay Subdistrict in the Southern District including the SHAs to achieve corporate escapement goals in a timely and orderly manner.

Common property and hatchery fisheries will be managed by ADF&G to achieve the established pink salmon SEG for Tutka Creek, as well as the established CIAA sockeye and pink salmon revenue and broodstock escapement goals. Sockeye salmon returns to Tutka Bay

Lagoon will be intermingled with pink salmon returns that will be captured for cost-recovery harvest licensing and/or broodstock. To avoid capturing the pink salmon multiple times during collection efforts for sockeye salmon, CIAA will place any caught adult pink salmon in the net pens. Management of these caught adult pink salmon is described in the Tutka Bay Lagoon Hatchery 2022 Annual Management Plan. Once in the net pens, the fish will be sorted by sex and enumerated. These numbers will be reported to ADF&G.

Per 5 AAC 21.373 Trail Lakes Hatchery Salmon Hatchery Management Plan, the Tutka Bay SHA opens on June 1 to cost recovery harvest. Portions of the SHA may open to commercial common property harvest by EO. The established commercial set gillnet fishery within the Tutka Subdistrict will not be restricted by this management plan in order to achieve hatchery objectives.

Sport fisheries will be managed in accordance with regulations as provided in 5 AAC 47– 5 AAC 75. EOs may be issued to liberalize or restrict sport fisheries based on achievement of broodstock goals.

8.2.4 Bear Lake SHA

8.2.4.1 Area Definition

The Bear Lake SHA (Figure 4) is defined in 5AAC 21.373 Trail Lakes Salmon Hatchery Management Plan as the marine waters of Resurrection Bay in the Eastern District north of the latitude of Caines Head at approximately 59° 58.93' N. lat., and the fresh waters of Bear Creek, Salmon Creek, and Resurrection River downstream from, and including, the Bear Creek weir, excluding the freshwaters downstream from the Seward Highway and downstream from Nash Road to the ADF&G fresh/salt water boundary markers. Cost-recovery licensing harvest will occur both in saltwater by contracted purse seine vessels and at the Bear Creek weir.

8.2.4.2 Fishery Management

CIAA is anticipating achieving the \$1,100,000 corporate cost recovery licensing goal generated from the sockeye returns to Resurrection Bay and Bear Lake. A commercial common property fishery should occur targeting hatchery produced sockeye salmon in the Bear Lake SHA in 2023 at the conclusion of CIAA cost recovery operations in that area.

Per 5 AAC 21.373 Trail Lakes Hatchery Salmon Hatchery Management Plan, the Bear Lake SHA opens on May 15 to cost recovery harvest. Portions of the SHA may open to commercial common property harvest by EO. Cost recovery management objectives will also include adherence to relevant portions of 5AAC 21.376 Resurrection Bay Salmon Management Plan concerning non-interference in the recreational fishery.

Sport fisheries will be managed in accordance with regulations as provided in 5 AAC 47– 5 AAC 75. EOs may be issued to liberalize or restrict sport fisheries based on achievement of broodstock goals. The hatchery cost-recovery licensing, commercial salmon seine, and sport fisheries targeting sockeye salmon may be restricted or closed completely if inseason information suggests that an escapement near the upper end of the desired inriver return range may not be achieved.

8.2.6 Port Graham SHA

8.2.6.1 Area Management

The Port Graham SHA (Figure 6) is defined in 5AAC 21.377 Port Graham Salmon Hatchery Management Plan as the marine waters of Port Graham Subdistrict in the Southern District south of a line from the southern tip of Passage Island at 151° 53.08' W. long., 59° 22.00' N. lat., to a point offshore at 59° 21.45' N. lat., 151° 50.05' W. long., to a point onshore at 59° 20.83' N. lat., 151° 48.53' W. long.

8.2.6.2 Fishery Management

No sockeye adults are anticipated to return in 2023.

ADF&G will be responsible for fishery management as it relates to the SEGs for chum and pink salmon in the Port Graham River common property and hatchery fisheries. The SHA will be opened or closed for the commercial common property fishery by EO.

Sport fisheries will be managed in accordance with regulations as provided in 5 AAC 47– 5 AAC 75. EOs may be issued to liberalize or restrict sport fisheries based on achievement of broodstock goals.

9.0 Approval	
Recommendation for Approval: Trail Lakes Hatchery Annual Management Plan	, 2023:
Dean Day, Executive Director, Cook Inlet Aquaculture Association	4/28/2023
Matt Miller, Fish and Game Coordinator, Division of Sport Fish	5/1/2023
Glenn Hollowell, Area Management Biologist, Division of Commercial Fisheries	5/1/2023
Jason Dye, Regional Supervisor, Division of Sport Fish	5/1/2023
Bert Lewis, Regional Supervisor, Division of Commercial Fisheries	5/1/2023
Ethan Ford, Regional Resource Development Biologist, Division of Comm. Fisheries	5/1/2023
Lorraine Vercessi, PNP Hatchery Program Coordinator, Division of Comm. Fisheries	5/15/2023
The 2022 Trail Lakes Hatchery Management Plan is hereby approved:	
Tom Taube, Deputy Director, Division of Sport Fish	5/18/2023
Forrest Bowers, Operations Manager, Division of Commercial Fisheries	5/17/2023
