FEDERAL AID IN WILDLIFE RESTORATION

STATE: Alaska

PROJECT NO.: W-6-R-6 TITLE: Alaska Wildlife Investigations
W-15-R-1 TITLE: Big Game Investigations

WORK PLANS: J (W-6-R-6) TITLE: Furbearer Studies
O (W-15-R-1) TITLE: Wolf and Wolverine Studies

JOB NOS.: 3 (Work Plan J) TITLE: Wolverine Productivity and
Breeding Studies
2 (Work Plan O) TITLE: Wolverine Studies

PERIOD COVERED: July 1, 1964 to June 30, 1966.

ABSTRACT

Carcasses of approximately 200 wolverine were obtained from trappers and bounty hunters. Specimens useful in establishing productivity, age composition, sex ratios and distribution were retained for future analysis.

Another index to productivity was provided by the analysis of the bounty information sheets completed when a wolverine is presented for bounty. These data were tabulated by unit by month for all areas for the period 1959-60 through 1965-66. Detailed analysis for trends in harvest have not been completed.

RECOMMENDATIONS

Decisions for recommendations should be reserved until analysis of data is complete; however, the marked increase in the annual harvest of wolverine in some units suggests serious consideration should be directed toward either adjustments in the legal seasons or in the methods and means of harvest if the trend does not change. Wolverine are a rare species of considerable aesthetic and economic value. Removal of the bounty system would seem appropriate recognition of the animal's value; particularly in view of the fact that wolverine do not constitute a significant hazard to man.

WORK PLANS: J (W-6-R-6) TITLE: Furbearer Studies
O (W-15-R-1) TITLE: Wolf and Wolverine Studies

JOB NOS.: 3 (Work Plan J) TITLE: Wolverine Productivity and
Breeding Studies
2 (Work Plan O) TITLE: Wolverine Studies

PERIOD COVERED: July 1, 1964 to June 30, 1966.

TECHNIQUES

Wolverine carcasses were purchased from bounty hunters and trappers. Approximately 200 were processed during this reporting period: Specimens potentially useful in perfecting age determination techniques, establishing age at sexual maturity, measuring fertility rates, delineating parturition periods, describing growth and clarifying taxonomic status were extracted from the carcasses. These data have not been analyzed.

Harvest characteristics are obtained from trappers and hunters when they present wolverine for bounty.

FINDINGS

The bounty information sheets for the period 1959-60 through 1965-66 were compiled to reflect harvest by game management unit by date. Tables (A through 7).

The chronology information should be particularly valuable to management deliberations regarding seasons and bag limits. Further insight into the characteristics of the annual harvest will be possible when the carcass data (sex, age, and reproductive status) is correlated with the chronological data. For example, preliminary analysis reveals proportionately fewer reproductively active female wolverines are caught in March and April. Thus, the long seasons may not have an adverse effect upon the population.
