## **Deer Harvest in Southeast Alaska 1980-1998**

# 1998 Deer Hunter Survey

## Summary Statistics

August 1998 – January 1999 season

(We include reported harvest data from January in our survey  
even though that is only a Federal hunting season.)

### INTRODUCTION

This is a report of the results of an annual deer hunter mail survey conducted by the Alaska Department of Fish and Game, Division of Wildlife Conservation. The survey was mailed to a sample of hunters who obtained deer harvest tickets throughout Southeast Alaska during the 1998 hunting season. We have conducted the survey since 1980 to quantify the Sitka black-tailed deer harvest in Southeast Alaska. Results of the survey contribute to management decisions and recommendations by Region I wildlife biologists to the Board of Game. They are also used by the U.S. Forest Service to help determine how logging and other land management decisions affect deer hunting. The Federal Regional Subsistence Council and Federal Subsistence Board use these survey results when deliberating federal subsistence hunting regulation changes.

**Form** – The 1998 season survey form was identical to that of the previous year. As with the 1996 and 1997 surveys we did not provide a map with the survey for hunters to use in reporting their hunting sites. Instead we asked hunters to be specific in describing the locations (islands, bays, shore and/or drainages) where they hunted deer. For the second year we also asked if hunters participated in the state “proxy” or federal “designated hunter” programs and the number of deer they took for others under those programs.

**Distribution** – Not every hunter received a survey and not everyone who received one responded. Approximately one-third of the deer hunters residing in Southeast Alaska who obtained deer harvest tickets were sent surveys.

**Response** – The overall response rate of those who received surveys was approximately 60%. Because response rates varied by community, the responses received from each community were multiplied by an expansion factor to calculate estimates for hunters possessing deer harvest tickets in the community. The higher the sample fraction and percentage of responses from a community, the lower the expansion factor. And, the higher a community's response rate, the better these data represent actual hunting effort and success of all hunters with deer harvest tickets in that community.

This year's overall response rate was the highest since we began mail surveys in 1980. Although the continued good overall response rate is encouraging, annual response rates from many villages, such as Angoon, Hoonah, Hydaburg, Kake, Klawock, Metlakatla, Pelican, Naukati Bay and Edna Bay are too low. The continued low response rates from many rural areas reduce our confidence in the ability of the survey to accurately describe actual deer hunting effort and success in parts of Southeast Alaska.

**Kill location** – Along with an increased survey response rate, the number of hunters who described kill location specifically enough for us to assign it to a Game Management Unit (GMU), island, major hunt area, or Wildlife Analysis Area (WAA) increased. When kill location was not identified specifically enough to assign to a GMU, island, major hunt area, or WAA, we report them as "unknown" or "missing" in the summary. In the past, when hunters were provided a map to code hunt locations, 99% of responding hunters reported hunt locations down to the scale of WAA. This year, without a map, the percentage of successful hunters who gave detailed enough information for us to code hunt locations to GMUs and islands was 99%. The percentage giving enough detail to code to major hunt areas increased from 92% in the 1997 survey to 97% this year; the percentage of those providing sufficient information for coding to WAAs increased 1% to 94% this year.

**Results** – Total deer harvest for the 1998/99 season is estimated at 12,289, an increase of about 1660 over the previous season but still 750 less than the average for the previous 17 years. Hunter numbers at 7727 were about 400 (5%) lower than average. Hunters spent 3.3 days afield for each deer killed, a half day less than the long-term average of 3.8 days/deer. The total number of hunter days afield was 17% below the long-term average. That continues a 4-year trend in the decline of the number of hunters and 2-year decline in the number hunter days afield and days per hunter. However, the hunter success rate improved in 1998. The estimated success rate for Southeast hunters was 64%, 1% higher than the long-term average and 6% higher than in 1997. The average number of deer killed per hunter was 1.6, equal to the long-term average.

#### *Proxy and designated hunters*

The number of hunters reporting as state "proxy" or federal "designated" hunters was higher in 1998 than 1997. We estimate 176 state proxy hunters from 9 communities took a total of 237 deer with a 54% success rate in 1998. That compares with about 130 hunters, 173 deer and a 54% success rate in 1997. 1998 reporting proxy hunters came from the following communities: Craig, Hoonah, Juneau, Ketchikan, Klawock, Meyers Chuck, Petersburg, Sitka, and Wrangell.

We estimate about 250 federal designated hunters from 10 communities took 603 deer with a 74% success rate. That compares with 176 hunters from 5 communities reporting 250 deer and a 57% success rate in 1997. 1998 reporting designated hunters came from the following communities: Angoon, Craig, Hollis, Hoonah, Ketchikan, Klawock, Pelican, Petersburg, Sitka, and Wrangell.

#### *Weather*

Although the winter of 1998/99 was one of the most severe in nearly three decades, weather did not affect hunting patterns or success during the 1998/99 season. Until late December, weather during the deer hunting season was mild with relatively low, nonpersistent snowfall at low elevations throughout much of Southeast. August and October were considerably wetter than normal; September and November were slightly drier. Weather turned severe in January with total winter snowfall 120–200% above normal in most areas of the region. The snowpack persisted at lower elevations in many areas until late spring. Pellet group surveys and mortality transects completed after the hunting season in spring 1999 indicate the effects of the winter on deer varied greatly throughout the region. Winter's effects even varied from drainage to drainage on some of the larger islands.

### *Results by GMU*

GMU 1A – Estimated harvest was near the long-term average of the unit (which includes Revillagigedo and Gravina islands, Cleveland Peninsula, and Behm Canal mainland). Gravina Island harvest was higher than average, whereas Revilla and Cleveland harvests were lower. Cleveland Peninsula harvest was only 14% of the long-term average and decreased for the fourth consecutive season. Number of hunters using the Cleveland was also lower. Biologists found record low pellet group densities on Cleveland Peninsula in spring 1999, winter mortalities, and the snowline at 200–600 feet elevation in mid April.

GMU 2 (Prince of Wales and neighboring islands) – Harvest on Prince of Wales (POW) rebounded in 1998 from a 10-year low the previous season. Harvest was estimated at 2220 deer, within 200 of the long-term average. Although total harvest on POW is comparable to that of the ABC islands in GMU 4, POW hunters spend 4.5 days afield for each deer taken compared to just over 2 days per deer in GMU 4. Harvest increased in all areas of POW except the Coffman Cove area. Greatest percentage increases were on Northern POW in Red Bay/Pt. Baker area and Whale Pass where harvest increased 60% from 1997, and Central POW in the Craig/Klawock/Thorne Bay area where increases were 50%. Although the overall island harvest was up, the reported number of does killed declined by almost half from the previous season to 82. Ketchikan hunters took 28% of the reported deer kill on POW, identical to 1997.

The number of hunters (1863) increased on POW from the previous year. Success rate increased from 53% to 63% and hunters spent an average of 5 days in the field, one less than in 1997. Seventy-three percent of the harvest in GMU 2 comes from hunters using highway vehicles or ATVs as their main mode of transport compared to 30% for the entire region.

Snowfall was heavy during the winter of 1998/99 in GMU 2, and the effects on deer may have been substantial in some locations. In a study of deer ecology on Hectea Island, during the mild winter of 1997/98 4 out of 42 telemetered deer died from predation by wolves. No animals were lost to starvation for a total winter mortality of 9.5%. In contrast, 12 out of 51 telemetered deer (24%) died from predation or starvation on Heceta last winter. Two of the 8 deer killed by wolves in 1998/99 were malnourished and would probably not have survived the winter. Most of the starvation loss involved fawns suggesting that recruitment to deer populations may be lower this year as a result of the winter.

GMU 1B and 3 (Central mainland and islands) – Deer harvest on the central mainland (GMU 1B) declined 30% from the previous year to a total slightly lower than average. Once again, the largest number of deer came from the Thomas Bay area. GMU 3 harvest was the highest of the 18 years of the survey at an estimated 1118. That is 3 times the 18-year average. Zarembo Island harvest remained about 400 deer. The island supplied half of Wrangell hunters' total harvest for the year . Petersburg hunters had success closer to home in 1998. The harvest on Mitkof Island was 50% higher than the long-term average, and the kill on Kupreanof Island was double the average since hunting was resumed there in 1993. Forty-five percent of the harvest in GMU 3 comes from hunters using highway vehicles or ATVs as their main mode of transport.

Petersburg snowfall was 50% greater than normal during the winter of 1998/99. Nevertheless, only one marked deer from a radiotelemetry study of Mitkof Island deer died from starvation or exposure during the winter. Pellet group surveys in spring 1999 indicate a stable or slightly increasing population on south Mitkof Island. On Zarembo, however, winter was more malevolent. Biologists found a number of winter-killed fawn and adult carcasses during February and March field trips.

GMU 1C (northern mainland, Douglas, Shelter, and Lincoln Islands) – Estimated harvest on Douglas Island dropped 17% from the previous season. Percentage of bucks in the harvest dropped to 70%; a 14% decline from 1997 but higher than the low of 55% in 1996. Although the estimated number of hunters increased 16% to about 800, number of hunter days was about the same as 1997. Because of its proximity to Juneau hunters, Douglas is consistently the most heavily hunted island per square mile in Southeast Alaska. It has the fifth highest number of reported hunter days per island behind Prince of Wales, Admiralty, Chichagof, and Baranof. It also has the lowest island hunter success rate (23%). Seventy percent of the harvest on Douglas comes from hunters using highway vehicles as their main mode of transport.

Spring 1999 surveys found relatively low pellet-group density on the north and west sides of Douglas Island. Some winter-killed fawn carcasses were found during the west side survey. Harvest on Shelter and Lincoln islands was identical to the harvest 1997. Percentage of does (33%) taken from those islands remained high but was down from 1997. Spring 1999 pellet-group density on Shelter was about 1/3 lower than in spring 1997.

GMU 4 (ABC and neighboring islands) – Estimated harvest was up 18% for the unit compared to 1997 harvest. Admiralty, Baranof, and Chichagof islands' harvest all increased from the previous year. However, the Kruzof Island kill increased most, up 300% to an estimated 500 deer, the highest harvest since 1994 and 60% higher than the 18-year average. Much of the increase on Kruzof can be attributed to more hunters afield. There were 60% more hunters than 1997, up to an estimated 322, with a 73% success rate in 1998 compared to 53% the previous year.

The Chichagof kill was an estimated 2536, an increase of about 21% (550 deer) from 1997. The increase in Chichagof harvest came mostly from Hoonah Sound/Ushk Bay, West Chichagof/Yakobi, and the Whitestone Harbor/False Bay area on Northeast Chichagof. Harvest in the Port Frederick/Hoonah/Freshwater area was generally lower. Although hunter days were roughly the same, the number of hunters on Chichagof increased by 11%. Most of that increase was due to more Juneau hunters whose numbers on Chichagof increased by about 30% from 1997.

Baranof Island harvest of 2424 was slightly better than in 1997. Increases came in the Sitka Sound area and on eastern and southern Baranof. Harvest from the Baranof side of Peril Strait and the western drainages decreased slightly. During spring 1999 pellet group counts, numerous deer were seen in Peril Strait and most seemed in good condition. Range condition and pellet group counts were normal despite the severe winter. Baranof hunter numbers decreased slightly, but number of hunter days remained constant.

Admiralty Island harvest of 2080 was up 20% from 1997. The kill on northern Admiralty was down but all other areas of the island registered an increase. Harvest in Seymour Canal was up 73% to an estimated 625 deer. However, during beach mortality transects in Seymour Canal in spring 1999, 18 deer carcasses were found in 3 miles of beach. Fourteen of the 18 mortalities were does which usually survive the winter better than fawns or bucks. Most of last year's Seymour Canal fawn crop probably succumbed to winter starvation. The number of hunters on Admiralty was the same as in 1997.

**Outlook** – By all indices the 1998/99 winter was the most severe in nearly 30 years and ended a string of 3 consecutive mild winters in Southeast Alaska. Spring 1999 pellet-group surveys and mortality transects indicate the effects of the winter on deer varied greatly throughout the region. However, the full magnitude of last winter's effects on deer may not be apparent from pellet-group surveys until spring of 2000. The 1999/2000 deer harvest should also be a good indicator of the magnitude of last winter's effects on individual deer populations.

FAX: (907) 465-4272

January 1999

Dear Southeast Alaska Hunter:

Attached is our 1998/99 deer hunter survey. We are sending it to a random selection of deer hunters who picked up deer harvest tickets for this past hunting season. Please invest a few minutes of your time to help manage Alaska's deer. **We really need your answer even if you did not hunt.**

The information you provide is essential to good deer management. In addition to harvest, questionnaire responses tell us what hunting areas are important to each community. Your knowledge and familiarity with the areas you hunt help us understand how local deer populations are doing and how deer hunting will be affected by other resource uses.

This year, in addition to asking you to report where you killed deer, we also would like to know where you hunted and were unsuccessful. We ask that you write in the name of the specific location of each hunting trip -- the bay, shore (N, S, E or W), stream drainage, and island or mainland area where you hunted. Please be as specific and accurate as you can. The more detailed the information you provide, the more confident we can be about what deer hunting areas are important to each community.

ADF&G Division of Subsistence will also be surveying deer hunters in some communities in Southeast Alaska this winter. If you participate in that survey, we ask that you also send in your response to this mail survey. Even though the surveys ask similar questions their objectives are somewhat different.

Survey results in summarized form are used by the Alaska Board of Game and the Federal Subsistence Board to set seasons and bag limits, and make other hunting regulations such as allocations to communities. In addition, the U.S. Forest Service uses the summarized data to help make decisions about what areas will be logged. Those who respond to the survey help make management decisions in areas important to them.

**We plan to send summary results of the survey to all who respond whether you hunted or not. Thanks for your continued cooperation.**

Sincerely,

Kim Titus  
Regional Supervisor

## ALASKA DEPARTMENT OF FISH AND GAME

## 1998/99 SEASON DEER HUNT REPORT

Report No. - 14260

Nonresident \_\_\_\_ Alaska Resident \_\_\_\_ Community: \_\_\_\_\_

Did you hunt deer in Southeast Alaska between August 1, 1998 and January 31, 1999?

 No If No, you are finished. Please mail this report. Thanks. Yes If yes, please complete the following information for each successful or unsuccessful trip YOU made to hunt deer. Include only deer you killed, not those of others in your party. Include deer you killed for someone else as a state "proxy" or federal "designated hunter". Do not report deer someone else killed for you as a proxy or designated hunter.

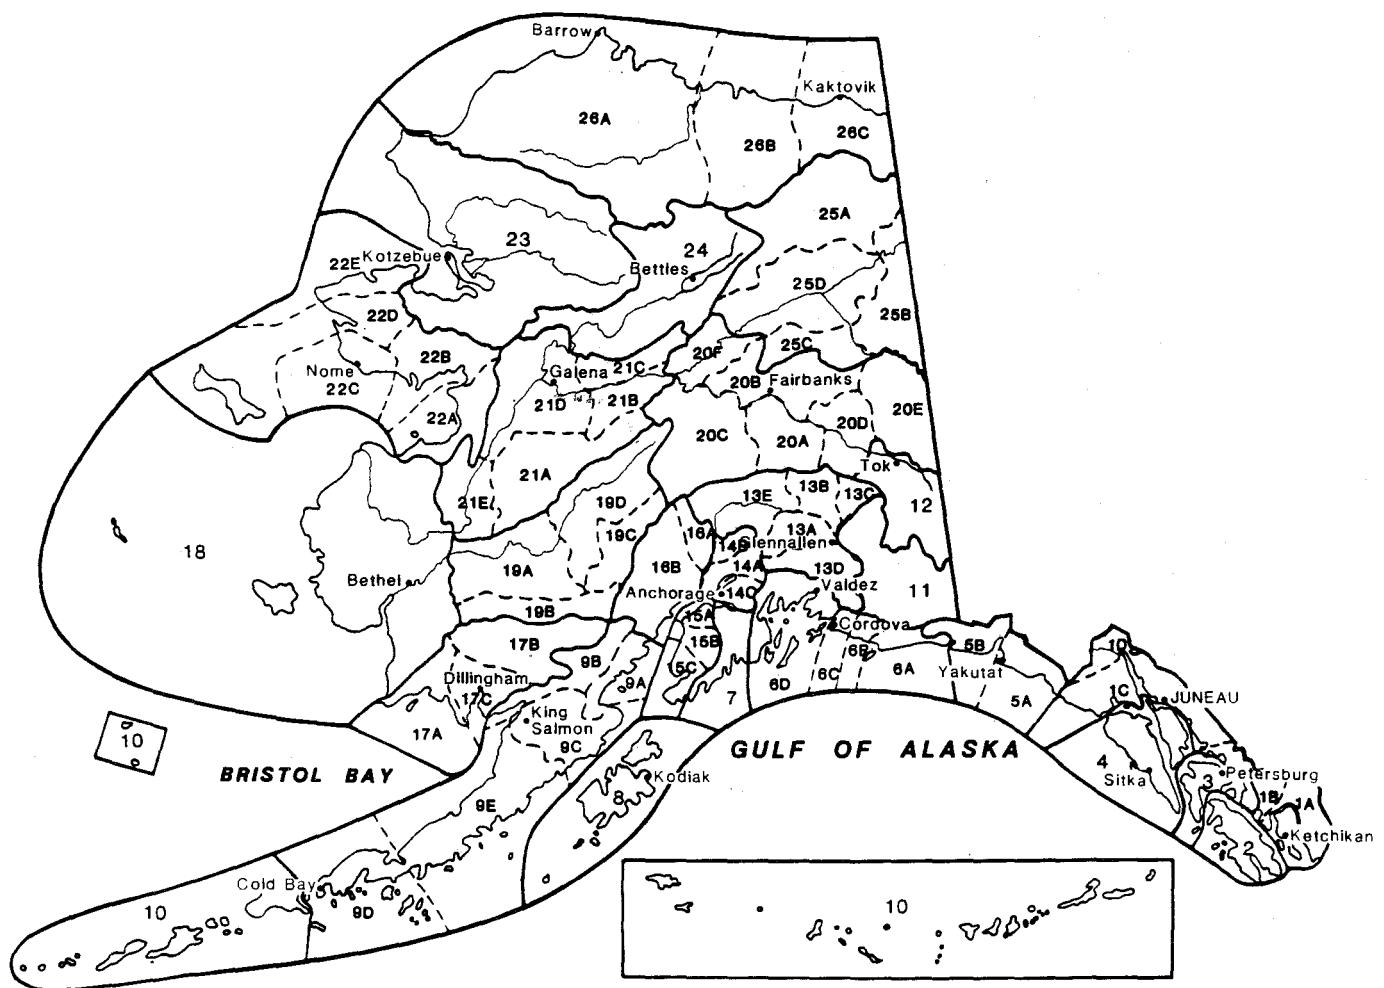

SPECIFIC LOCATION OF TRIP (please identify Bay, Shore [N, E, S, or W], Drainage, and Island/mainland)	No. of bucks	No. of does	Month of Trip	No. of days hunted	Transportation Used to get to Hunt Area (boat, plane, car, etc.)
Example N. Shore Tenakee Inlet, Chichagof Is.	0	1	10	2	boat
Example Upper Staney Creek, POW	0	0	9	12	truck
1.					
2.					
3.					
4.					
5.					
6.					

Did you hunt deer for someone else as a state proxy hunter? Y \_\_\_\_ N \_\_\_\_; as a federal designated hunter? Y \_\_\_\_ N \_\_\_\_

If yes, how many of the deer reported above did you take as a proxy? \_\_\_\_\_; as a designated hunter? \_\_\_\_\_

We are interested in any comments or observations you may have. Please send them to the address on the back of this card, or contact your local area biologist. Thanks for helping with wildlife management in Southeast Alaska.

# Alaska's Game Management Units

The Federal Aid in Wildlife Restoration Program consists of funds from a 10% to 11% manufacturer's excise tax collected from the sales of handguns, sporting rifles, shotguns, ammunition, and archery equipment. The Federal Aid program allots funds back to states through a formula based on each state's geographic area and number of paid hunting license holders. Alaska receives a maximum 5% of revenues collected each year. The Alaska Department of Fish and Game uses federal aid funds to help restore, conserve, and manage wild birds and mammals to benefit the public. These funds are also used to educate hunters to develop the skills, knowledge, and attitudes for responsible hunting. Seventy-five percent of the funds for this report are from Federal Aid.
