**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics****INTRODUCTION**

Economic and social values play an increasingly important role in the natural resource decision making process. In order for resource managers, legislators, policy makers, and the public to fully consider alternative natural resource uses, information on the economic and social values the public places on wildlife and wildlife related uses must be considered.

Wildlife is an integral part of the Alaskan lifestyle and a central feature of Alaska's national and international image. In spite of the obvious importance of wildlife to Alaska, few data have been collected on the contributions that wildlife resources make to the local, regional, and state economies, or on the social and economic value both state residents and nonresidents place on these resources.

In 1989, the Division of Wildlife Conservation of the Alaska Department of Fish and Game initiated a program to better understand the social importance and economic impact and value of Alaska's wildlife. The first step the agency took was to cooperate with the U. S. Fish and Wildlife Service Federal Aid Program and the U. S. Forest Service Rocky Mountain Forest and Range Experiment Station to host a workshop with some of the nation's leading resource economists to develop a sound technical strategy for the program. Two products resulted from that workshop: 1) a book explaining the use of economic principles in addressing wildlife management issues in Alaska for wildlife managers and graduate students in wildlife ecology entitled Valuing Wildlife Resources in Alaska, edited by George L. Peterson, Cindy Sorg Swanson, Daniel W. McCollum, and Michael H. Thomas was published in 1992; and, 2) a detailed study plan for estimating the economic impact of wildlife dependent activities on the state's and regional economies was developed.

The economic impact study plan identified four wildlife user/activity combinations: 1) resident hunting; 2) resident wildlife viewing; 3) nonresident hunting; and 4) nonresident wildlife viewing. In 1991, the Division of Wildlife Conservation sought the cooperation of federal resource management agencies to begin to implement the study plan by designing a project to collect and analyze economic data from the first three wildlife user/activity groups. These three groups were included in a single project because there existed appropriate sampling frames for each group from which primary data could be gathered using mail surveys. The project was designed to include collection and analysis of public opinion data on wildlife management issues as well as economic data.

This report explains the methods used in collecting and analyzing data for that project. It also summarizes the results of that project with respect to the economic and wildlife viewing trip characteristics information collected from the resident wildlife viewing user/activity group. Results on the public opinion and demographic data collected from the resident wildlife viewing user/activity group, and results from all data collected from the resident and nonresident hunting user/activity groups are presented in separate, companion reports.

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics****CONTRIBUTING AGENCIES**

This project was made possible by the contributions of the following agencies:

The Alaska Department of Fish and Game

The U. S. Forest Service Rocky Mountain Forest and Range Experiment Station

The U. S. Fish and Wildlife Service Federal Aid Program

The U. S. Forest Service Region 10

The National Park Service

The Bureau of Land Management

The U. S. Fish and Wildlife Service, Alaska Region

The University of Alaska, Fairbanks

**PROJECT DESIGN AND ADMINISTRATION**

The purpose of the project was to collect, analyze, and report primary data on the economic and social importance of wildlife from three wildlife user/activity groups: resident hunters, resident wildlife viewers, and nonresident hunters. Mail surveys were chosen as an appropriate and cost effective method of collecting data from individuals in each group. A sampling frame was identified for each of the three user/activity groups and a sample estimated to be sufficient in size to provide economic data at a regional level was drawn from each:

1. Resident Hunters

A simple random sample of 4,000 resident hunters was drawn from the list of Alaska residents who purchased a resident Alaska hunting license in 1991.

2. Resident Wildlife Viewers

A sample weighted by legislative district of 4,725 was drawn from the list of Alaskans registered to vote in 1990, which was the most recent election year.

The samples from the resident hunters and the registered voters were mutually exclusive. If a hunter was selected who had already been selected from the voters list, then another hunter was selected.

3. Nonresident Hunters

A simple random sample of 1,000 was drawn from the list of nonresidents who purchased an Alaska hunting license in 1991.

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

A steering committee consisting of a representative from each contributing agency was formed in September, 1991. The purpose of the committee was to identify the economic and public opinion information needs of each agency, to assist in designing the questionnaires to be used in the mail surveys, and to pretest draft questionnaires by holding focus groups. Dr. Richard C. Bishop and Dr. Thomas A. Heberlein from the University of Wisconsin assisted the steering committee and the authors in developing questionnaires which would result in providing the information needs identified by the committee.

The questionnaires were designed to estimate the following:

1. the number of trips that each user group took during 1991 to pursue wildlife related activities;
2. the impact of those trips on the state and regional economies;
3. the economic value that users placed on those trips;
4. the demographic characteristics of each user group; and
5. the attitudes, opinions, and knowledge of each user group about wildlife and wildlife management.

Draft questionnaires were developed and pretested in a total of 19 focus groups consisting of from 6 to 15 participants. A total of 156 draft questionnaires were completed by focus group participants and were analyzed to identify questionnaire problems. The final questionnaires consisted of a combination of public opinion, demographic, and economic questions. A copy of the questionnaire is presented in Part B of each report covering the results from each user group. The questionnaires took respondents from 25 to 30 minutes to complete.

The mail surveys consisted of four separate mailings to each group:

1. an introductory letter was sent to all persons drawn in the samples explaining that the person had been selected to participate and requesting their cooperation;
2. a copy of the questionnaire was sent to all persons who did not have their introductory letters returned by the Post Office as undeliverable;
3. a second copy of the questionnaire was sent to all persons who did not respond to the first questionnaire; and
4. a third copy of the questionnaire was sent to all persons who did not respond to either the first or second questionnaire.

The mailing schedule and results are summarized in Table 1.

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**
**TABLE 1. Mailing schedule and questionnaire returns**

DATE	ITEM AND NUMBER SENT	NUMBER RETURNED
March 6, 1992	Introductory letters 4,000 Alaska hunters 4,725 Alaska voters 1,000 nonresident hunters	Undeliverable letters 454 Alaska hunters 584 Alaska voters 118 nonresident hunters
March 23, 1992	First questionnaires 3,546 Alaska hunters 4,141 Alaska voters 882 nonresident hunters	First questionnaires 1,477 Alaska hunters 1,554 Alaska voters 397 nonresident hunters
April 20, 1992	Second questionnaires 2,069 Alaska hunters 2,587 Alaska voters 485 nonresident hunters	Second questionnaires 391 Alaska hunters 539 Alaska voters 184 nonresident hunters
May 18, 1992	Third questionnaires 1,678 Alaska hunters 2,048 Alaska voters 301 nonresident hunters	Third questionnaires 209 Alaska hunters 277 Alaska voters 66 nonresident hunters
		Total questionnaires 2,077 Alaska hunters 2,370 Alaska voters 647 nonresident hunters

Nonresident hunters had the highest response rate with 73.4% of those who received a questionnaire responding; resident hunters had the second highest response rate with 58.6% responding; and Alaska voters had the lowest response rate of 57.2%.

# ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics

## SURVEY RESULTS

The returned questionnaires from each survey were compared to the original sampling frames to test for response bias. The known gender, age and legislative district of the returns from the Alaska voters were compared to those from the entire population of 1990 voters. The known gender and age of resident and nonresident hunters were compared to those from the entire populations of 1991 resident and nonresident hunters respectively. The location of residence for hunters was not compared because only mailing addresses were available on the hunting license files. In Alaska, unlike other parts of the U.S., mailing address is not a reliable indicator of where a person actually resides. Using a significance level of .05, statistical differences were found between returned questionnaires and the sample population of Alaska voters with regard to legislative district, of resident hunters with regard to age, and of nonresident hunters with regard to both gender and age. Weights were calculated for each factor for each sample to remove response bias based on those characteristics and to retain the original sample size to ensure the validity of statistical results. The results of the comparisons and the corresponding weights are presented in Tables 2, 3, and 4.

The results from each user/activity group are presented in two separate reports: Characteristics and Attitudes Towards Wildlife, and Trip Characteristics and Economics, for a total of six reports:

**Alaska Voters: Their Characteristics and Attitudes Towards Wildlife**

**Alaska Voters: Their Wildlife Viewing Trip Characteristics and Economics**

**Alaska Hunters: Their Characteristics and Attitudes Towards Wildlife**

**Alaska Hunters: Their Hunting Trip Characteristics and Economics**

**Alaska Nonresident Hunters: Their Characteristics and Attitudes Towards Wildlife**

**Alaska Nonresident Hunters: Their Hunting Trip Characteristics and Economics**

All six reports are very detailed and intended to be used as reference documents by the cooperating agencies. The responses to each question in each questionnaire are analyzed by demographic features of the respondents. Those features are:

### ALASKA VOTERS

- gender
- age
- location of residence
- education
- income
- race
- years living in Alaska
- history of hunting
- history of wildlife viewing

### ALASKA HUNTERS

- gender
- age
- location of residence
- education
- income
- race
- years living in Alaska
- history of completing a hunter education class

### NONRESIDENT HUNTERS

- gender
- age
- education
- income
- race
- history of completing a hunter education class
- use of a hunting guide
- location of hunting trip
- species hunted
- species bagged

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

One of the demographic factors used in analyzing the results of both the public opinion and economic data is the location of respondents' residences and their hunting or wildlife viewing activities. In all six reports location is identified by geographic region. Five regions are defined on the basis of Alaska Department of Fish and Game's Game Management Units. Table 5 gives the regional designation for each Game Management Unit. These regions were designed to correspond with regions used by the Alaska Visitor Statistics Program of the Alaska Department of Commerce and Economic Development, Division of Tourism. The regions generally correspond to the regions used by the Division of Wildlife Conservation of the Alaska Department of Fish and Game, with one exception. The Division of Wildlife Conservation does not recognize Region 4, and considers it part of Region 2.

	GMU 16	GMU 26B		
		GMU 26C		

Part A of each of the six reports presents summary tables for the breakdown of responses by demographic features for each individual question. Most of the summary tables are of two basic types:

#### Pearson Chi-squared Tables

A table presenting the Pearson Chi-squared statistic, the degrees of freedom, and the observed significance level of the test for independence between the responses to the question and the various categories or levels of each demographic factor is presented first.

In addition to the demographic features, question responses are tested for independence between "mailings when the response was received". In mail questionnaires, there is often a response bias associated with when the questionnaire was returned by the respondent. Respondents who return their questionnaires after receiving the first questionnaire may have different characteristics, attitudes, and spending habits than those who returned their questionnaires after receiving one or two reminder questionnaires. Such differences indicate that it would not be valid to assume that the surveys' results could be applied to those people who received a questionnaire but failed to respond. This bias may be specific to individual questions in the questionnaires. To examine the

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

possibility of this type of bias, each individual question within each questionnaire was analyzed to identify statistically significant differences between the responses received after each mailing. For those questions where a statistically significant difference exists between the mailings when the responses were received, care must be taken in expanding the results to the population from which the samples were drawn.

Over 2,000 significance tests were calculated over all three surveys. If an observed significance level of .05 is used to reject the null hypothesis of independence, and conclude that statistically significant differences exist between the demographic categories, then we could expect to be wrong in our conclusions about 5 times in 100. This means that we would be wrong about 100 times over all three surveys.

**Breakdown Tables**

Summary tables which breakdown or cross the responses to the individual question with each of the demographic factors follow the Pearson Chi-squared Table. The breakdown tables present the percentages of the weighted responses that are in each category of response to the question for each category of the demographic factors. Since the percentages are weighted, they can be used as population estimates for each respective sample frame within the guidelines discussed in the previous section regarding response bias. The reliability of the percentages presented in the summary tables depends on the sample size and the magnitude of the percentage. Survey results close to 50% are the least reliable; results around 1% or 99% are the most reliable. Larger samples provide greater reliability than smaller samples. Table 6 summarizes the reliability intervals at the 95% confidence for each of the three surveys.

<b>TABLE 6. Survey Reliability Intervals: 95% Confidence Level</b>			
	<b>VOTER SURVEY SAMPLE SIZE 2370</b>	<b>RESIDENT HUNTER SURVEY SAMPLE SIZE 2077</b>	<b>NONRESIDENT HUNTER SURVEY SAMPLE SIZE 647</b>
<b>WHEN SURVEY RESULT IS:</b>	<b>THEN MAXIMUM MARGIN OF ERROR IS:</b>		
<b>1% OR 99%</b>	<b>0.4%</b>	<b>0.4%</b>	<b>0.8%</b>
<b>10% OR 90%</b>	<b>1.2%</b>	<b>1.3%</b>	<b>2.3%</b>
<b>20% OR 80%</b>	<b>1.6%</b>	<b>1.7%</b>	<b>3.1%</b>
<b>30% OR 70%</b>	<b>1.8%</b>	<b>2.0%</b>	<b>3.5%</b>
<b>40% OR 60%</b>	<b>2.0%</b>	<b>2.1%</b>	<b>3.8%</b>
<b>50% OR 50%</b>	<b>2.0%</b>	<b>2.2%</b>	<b>3.9%</b>

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

Most of the questions required unique answers. That is, each respondent chose one answer among a number of possibilities. However, several questions allowed respondents to provide more than one response. For example, hunters could list more than one species when asked which species they were hunting. The summary tables for questions with multiple responses are identified as such and do not display totals.

The unit of analysis for all the public opinion and demographic data is the individual respondent and all respondents are included. Missing responses to individual questions are identified. The unit of analysis for trip characteristics and economic activities varies between the individual respondent with all responses included, a subset of respondents who indicated that they have participated in wildlife-related activities, and randomly selected wildlife-related overnight trips taken in 1991. The relevant unit is identified at the bottom of each table. The overnight trips in the nonresident hunters survey were selected by having respondents identify their longest overnight hunting trip in Alaska. This was appropriate because most nonresident hunters only make one overnight hunting trip to Alaska per year. However, resident hunters and wildlife viewers may make many overnight trips. The overnight trips taken by residents were selected by having respondents first list their wildlife viewing or hunting trips in a table. From the table, the respondents were directed through a series of instructions which resulted in one of their trips being selected. They were then asked a series of questions regarding their economic activities and the characteristics of their selected trip. All returned questionnaires were reviewed to ensure that only those trips that were correctly identified through the random selection process were considered in the analyses. The reader can refer to the questionnaire in Part B of each report to review the exact mechanism used to randomly select overnight trips.

**ACKNOWLEDGEMENTS**

Many people worked long and hard to make this project a reality. The project steering committee members, Mr. William Martin of the Federal Aid Program of the U. S. Fish and Wildlife Service, Mr. Robert Dewey of the U. S. D. A. Forest Service, Alaska Region, Ms. Sue Mills and Mr. Doug Whittaker of the National Park Service, Mr. John Thompson of the Bureau of Land Management, Dr. John Schoen and Ms. Lana Shea of the Alaska Department of Fish and Game, and Dr. John Boyce of the University of Alaska, Fairbanks, all dedicated considerable time and effort to project design. Dr. Erda Wang and Ms. Michelle Haele, of Colorado State University assisted in analyzing the economic data. The entire staff of the Information Management Program of the Division of Wildlife Conservation, Alaska Department of Fish and Game made the whole project possible by their exceptional abilities and willingness to put forth whatever effort necessary to execute all phases of the project. Staff members include Mr. Bob Walker, Ms. Tammy Wettin, Ms. Ronda Zak, Ms. Rebecca Strauch, Mr. Earl Becker, Mr. Randy Kardong, Ms. Teri Arnold, Ms. Lynn Dang, Ms. Ruth Moulton, Ms. Suzan Bowan, and student interns, Mr. Michael Schmahl, Mr. Jeffrey Sabrowski, Ms. Edith Jones, Ms. Kynda Curtis, and Ms. Jennifer Raley. Mr. Larry Aumiller created original drawings for the covers of each questionnaire. Ms. Sheryl Jamieson provided clerical support.

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

**Characteristics of Primary Wildlife Viewing Trips**

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics****A Brief Summary of Characteristics of Primary Wildlife Viewing Trips**

The Resident Voter sample consists of 2,370 individuals of whom 32.4% (after weighting) reported taking an overnight trip in 1991 with nonconsumptive wildlife use, which we refer to as "wildlife viewing," as one of the planned activities. Those individuals listed information about each of their overnight wildlife viewing trips in a table and were then led through a process by which they: (1) classified their trips as primary purpose wildlife viewing trips or secondary purpose wildlife viewing trips, and (2) randomly selected an overnight trip about which to provide detailed information. The process through which respondents were led to classify their trips as primary or secondary and then randomly select one of their trips can be seen in the survey instrument contained in Section B of this report. Respondents were asked to list up to 8 wildlife viewing trips in Table 1 of the survey. They were instructed to list their primary wildlife viewing trips first, then use any remaining space for secondary wildlife viewing trips. The basic distinction between primary and secondary trips, as can be seen in the instructions and examples preceding Table 1 in the survey instrument, was explained by asking respondents to consider the question "Would I have made this trip to this place if I had not been planning to view wildlife?" If the answer for any particular trip was NO, then the trip was classified a primary trip. If the answer was YES, the trip was a secondary wildlife viewing trip.

After listing up to 8 overnight wildlife viewing trips, primary trips first, in Table 1 of the survey booklet, respondents were referred to Table 2 which directed them to choose a particular trip from Table 1 as their "SELECTED TRIP," depending on the total number of trips they listed in Table 1. The random selection process was set up so individuals selected a primary purpose wildlife viewing trip if they had any primary trips at all. Only those individuals with no primary purpose trips in 1991 randomly selected a secondary purpose wildlife viewing trip about which to provide detailed information. The trip letters in Table 2 designated as the SELECTED TRIP (for each possible number of trips in Table 1) were randomly generated for each individual survey booklet, i.e., Table 2 was individually generated for each survey booklet. The result was detailed information about a sample of 618 overnight wildlife viewing trips that, after weighting--as described in the Introduction, the resident voter sample was weighted based on legislative district in which respondents live--and a checking process to indicate whether they correctly followed the random selection mechanism, could be considered a random sample of all overnight wildlife viewing trips in 1991. Fifty-two percent of the weighted trips had wildlife viewing as the primary purpose for the trip. Because it is not clear how much of the value of trips for which wildlife viewing was a secondary purpose can be attributed to wildlife viewing, our main focus is on primary wildlife viewing trips. This weighted subsample consists of 320 trips (304 before weighting). We assume that the trip would not have been taken had wildlife viewing not been available and, therefore, we attribute all the trip value to wildlife viewing.

The table in the Resident Voter survey had space for respondents to list basic information about 8 trips. There could be some people who took more than 8 overnight wildlife viewing trips during 1991 and to that extent our results will be conservative because we based our total number of trips on the trips listed in that table. The frequency distribution of primary purpose trips in that table are shown in Tables A-1, broken down by demographic characteristics of respondents. Because of the large amount of information and detail in each of the tables, our discussion will only skim the surface. This report is intended to be a reference document and readers are encouraged to spend time studying the tables, along with the Pearson chi-square results presented before each series of tables, on any breakdowns in which they are interested. With that, some explanation of how to read the tables is in order. First, consider the Pearson chi-square tests for "number of primary trips." The null hypothesis for the chi-

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

square test is that the two variables are independent. The calculated chi-square statistics are shown under the heading "Value," the degrees of freedom for the chi-square test are shown under "DF." The last column, titled "Significance," shows the observed significance levels of the tests. Those levels represent the probability that a random sample would result in a chi-square statistic of at least the magnitude calculated. If that probability is small enough (we will use the .05 level), the hypothesis that the two variables are independent is rejected. The first test shown is of the variables PTRIPS (number of primary trips) and MAILING (whether the respondent responded to the first, second, or third mailing). The calculated chi-square statistic is 11.51838 with 16 degrees of freedom. That test results in a significance level of .77642. That does not meet our criterion of .05 (.77642 is greater than .05); we cannot reject the null hypothesis of independence. We conclude that the number of primary wildlife viewing trips by respondents does not differ significantly between people who responded to the different mailings. Further down that table of chi-square tests is the test of PTRIPS and INCOME. The calculated chi-square statistic for that test is 67.58663 with 40 degrees of freedom and a significance level of .00413. That test does meet our .05 criterion (.00413 is less than .05). We reject the null hypothesis of independence and conclude that the number of primary trips taken differs between respondents with different income levels.

Moving on to the frequency breakdown tables, the first of the A-1 tables shows the distribution of the number of primary wildlife viewing trips broken down by gender and age category of respondent. The first column, labelled TOTAL, shows the distribution of number of primary trips for the complete weighted sample. Going down that column: 83.6% of the sample took 0 primary purpose wildlife viewing trips in 1991, 9.0% took 1 primary trip, 4.2% of the sample took 2 primary purpose trips, etc. down to 0.1% of the sample taking 7 primary purpose wildlife viewing trips in 1991. The next 3 and 7 columns show the distribution of number of primary wildlife viewing trips broken down by gender and age category of respondent, respectively. Looking at column percentages: 85.9% of the males and 81.2% of the females in the sample took 0 primary trips in 1991, 7.2% of the males and 11.0% of the females took 1 primary purpose trip, and so on. Looking at the 31-40 years of age column: 10.1% of respondents aged 31-40 took 1 primary purpose wildlife viewing trip in 1991, 4.5% of those aged 31-40 took 2 primary purpose trips. Row percentages refer to breakdowns going across rows of the table. Of respondents taking 1 primary purpose wildlife viewing trip in 1991: 41.4% were male and 58.6% were female. Of those taking 2 primary purpose trips in 1991: 1.6% of the respondents were in the under 21 age category, 15.3% were aged 21-30, 33.2% were aged 31-40, 27.2% were aged 41-50, 11.0% were aged 51-60 and 11.8% of those taking 2 primary purpose wildlife viewing trips in 1991 were over 60 years old. The row labelled TOTAL shows the demographic breakdown for the complete sample. Of our sample, 52.0% were male and 48.0% were female. The age breakdown of our sample was: 1.7% under 21, 16.3% aged 21-30, 31.1% aged 31-40, 25.3% aged 41-50, 13.1% aged 51-60, and 12.5% of our total sample was over 60 years old. The last row of the table shows summary statistics for each breakdown. For the TOTAL sample column, the mean number of primary purpose wildlife viewing trips in 1991 was 0.29 with a standard error of 0.02, the median number of primary trips was 0, the standard deviation of number of primary trips for our sample was 0.82, and the number of nonmissing cases on which the statistics are based was 2,370.15. (The number of nonmissing cases are not whole numbers because of the weights that were applied. The weights were taken to 3 decimal places so there is a little bit of rounding error when they are aggregated--hence, the total sample adds to 2,370.15 cases rather than 2,370 cases--and there will be some rounding error using means and sample sizes to calculate total numbers for various breakdowns. When we give totals in this report, we calculated them with a little more accuracy than is shown on the tables.) Because we are giving the summary statistics, it is important to show the sample sizes on which they are based to give readers an indication of how robust they might be. Likewise, for people over age 60: the mean number of primary

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

trips was 0.16 with a standard error of 0.03, the median was 0, standard deviation was 0.5 and there were about 296 people in that age group.

From the distribution for the total sample in Table A-1 we calculated a weighted total of 698 trips taken by 388 individuals in the total Voter sample for which wildlife viewing was the primary purpose. (Of those 388 individuals, we concluded that 320 had correctly followed the random trip selection procedure. Hence, our discussion of trip attributes is based on 320 (post weighting) cases.) Expanded to the total Voter population, we estimate that 83,773 primary purpose wildlife viewing trips were taken by 46,567 Alaska voters in 1991 (16.4% of Alaska voters).

To illustrate the rounding error mentioned above, if one were to calculate the total number of primary trips in our sample by multiplying the mean of 0.29 by sample size of 2370.15 one would estimate about 687 trips. Our estimate of 698 trips in the sample was based on the more accurate mean of 0.2945. With that in mind and recognizing that the results are approximations, readers can make many such calculations throughout this report.

Tables A-2 to A-10 present information about respondents' "Selected Primary Purpose Wildlife Viewing Trip." That was the designation for the randomly selected trip about which respondents provided detailed information. Tables A-2 (we refer to Tables A-2 in the plural because the table is composed of several demographic and characteristic breakdown tables) show the trip destination region broken down by demographic characteristics of respondents. Regions 2 and 3, South Central and Interior Alaska, were the most popular trip destinations, accounting for about 84% of the primary trips between them. Only a very small subset of the primary trips covered more than one region. Tables A-3 show the wildlife species sought on primary purpose trips--those species that respondents reported they went to see. The most commonly mentioned species were caribou, moose, marine mammals, and sheep. Because people could go to see more than one species column percentages do not add to 100%. Few people reported going to see grizzly bears and mountain goats, species we a priori thought might be more commonly sought. People may have been telling us the species they were going to see AND had a relatively high probability of actually seeing. Tables A-4 give the distribution of species actually seen on primary wildlife viewing trips. On half the primary trips respondents reported seeing bears, though only 8.1% reported seeing grizzly bears. Respondents reported seeing moose on 59.9% of their trips, caribou on 41.5%, sheep on 34.0%, wolves on 13.5%, and eagles on 43.1% of their trips. Tables A-5 and A-6 indicate that the average primary purpose wildlife viewing trip consisted of 4.2 people in the party and 3.3 nights away from home (which we interpret to be a 4 day trip). People actually looked for or viewed wildlife on 2.9 days of their trip (Tables A-7), and on those days spent an average of 6.3 hours actually looking for or viewing wildlife (Tables A-8). The most common month in which a primary trip was taken was July (26.7% of primary trips), followed by June (19.3%), August (17.0%), and May (15.4%) as shown in Tables A-9. No primary trips were taken in December and January. Tables A-10 show the proportions of primary trips on which various attributes were present and various facilities or site characteristics were encountered. On 81.3% of the primary trips, people reported seeing many different kinds of wildlife, 75.8% of the respondents saw a lot of wildlife even if they were the same kind, 67.4% saw particularly large individual animals, 55.3% reported seeing unique or unusual wildlife, and 78.3% reported getting close to wildlife. "Saw many other people at the site" and "had road access all the way to the site" were true for slightly more than half the primary trips. Only 5.6% and 12.3% saw or heard many off-road vehicles and power boats, respectively. Public use cabins were encountered on 12.2% of the primary trips, public boat moorings or launch areas on 28.3%, public air strips on 20.9%, hiking trails on 62.1%, information center or naturalist on 55.1%, and public campgrounds were encountered on 61.7% of primary trips. Active mines were seen on 5.1% of

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

the primary trips, old clearcuts and recent clearcuts were seen on 12.1% and 7.8% of primary trips, respectively, and commercial fishing activity was seen on 25.9% of the primary trips. To some extent, maybe to a large extent, people self select on attributes or facilities they consider good or bad for their wildlife viewing trips rather than merely happening on them. Some areas become known for a particular species of animal or for a diversity of species. Other areas become known to be used by power boaters or off-road vehicles so people use or stay away from those areas as their preferences dictate. Tables A-71 to A-92 in the companion report to this one (Alaska Voters: Their Characteristics and Attitudes Toward Wildlife) showed ratings of those same attributes and facilities on a scale from strongly attractive in terms of a wildlife viewing trip to strongly unattractive by the total Voter sample.

STATEWIDE BREAKDOWN OF 304 WEIGHTED RESPONSES FROM ALASKA VOTERS  
TAKING PRIMARY PURPOSE WILDLIFE VIEWING TRIPS

MULTIPLE RESPONSES WERE POSSIBLE SO COLUMN PERCENTS DO NOT SUM TO 100

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

**The Net Economic Value of Primary Wildlife Viewing Trips**

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics****Net Economic Value and Primary Wildlife Viewing Trips**

As discussed by McCollum et al. (1992), the correct concept of value in cases where goods are not efficiently price rationed, i.e., where price alone does not control access to the good, is average consumer surplus. That is exactly the case for goods not traded in markets such as wildlife and outdoor recreation. Consumer surplus measures an individual's willingness to pay for a good or service above and beyond the cost of obtaining the good or service. It reflects the net value placed on the good or the net benefit derived from consuming the good. Consider the following illustration of consumer surplus. Suppose an individual receives \$1,000 worth of benefit from hunting brown bear. If she has to pay up to \$1,000 to hunt brown bear, she feels she got her money's worth from the experience. If she has to pay \$1,001, though, she feels that is too much, and she will not hunt. Thus, \$1,000 is the gross value of brown bear hunting to this individual. Suppose the individual is offered an opportunity to hunt brown bear for \$200. She still gets \$1,000 worth of benefit from the experience even though she pays only \$200. Looking only at the price of the brown bear hunt, one would conclude that the value of brown bear hunting to the individual is \$200. But we know that the individual is willing to pay up to \$1,000 to hunt brown bear. She is getting a bargain, \$1,000 worth of benefit for only \$200. She receives a net value, or consumer surplus, of \$800--\$800 worth of benefit that she doesn't have to pay for, that does not show up in any market transaction. If a resource manager looked only at the market transaction, or price, he or she would have undervalued the individual's brown bear hunting experience by \$800.

Consumer surplus tells us the net value of a nonmarket good or service--the net benefit received. It is not the amount currently captured in any economic transaction, though in theory it could be captured as discussed by Loomis and Thomas (1992). It is the appropriate value for benefit-cost analysis.

Tables A-11 through A-15 focus on the net economic value, or net benefit, received by wildlife viewers from their Selected Trip. Tables A-11 indicate that 94.3% of the respondents felt their trip was worth the money they paid. That implies they received net benefit greater than or equal to zero--the trip was not a disbenefit. Tables A-12 present the distribution of net values (over and above the cost of their trip) that respondents' placed on their trip broken down by several demographic and trip characteristics. The average net value was \$134, with a median value of \$100. On average, respondents would have been willing to pay \$134 more in costs to take their Selected Trip. The survey provided some explanation of why some respondents chose to put a zero net value on their trip. Some indicated the trip was worth exactly what they paid and no more--a true zero net value. Others indicated they responded 0 because they could not put a number on their net value or some other reason. Based on comments written on the surveys, the "other" reasons specified by respondents were largely along the lines that they could not estimate a value for their Selected Trip or they did not think monetary values should be placed on wildlife and wildlife viewing. For these latter cases, the true value may be greater than zero, but a conservative approach is to regard them as zero.

Tables A-13 and A-14 show the distribution of respondents' net economic value broken by wildlife species sought and wildlife species seen. In terms of species sought, trips on which grizzly bears and mountain goats were sought appear to be higher valued than trips on which they were not. One must be careful, however, because both those average trip values are based on small sample sizes (6.85 and 8.32, respectively). Based on somewhat larger sample sizes, trips on which caribou and moose were sought appear to be somewhat below the \$134 average for all trips, while trips on which wolves, whales, sea birds, eagles, and sheep were sought appear to be somewhat above the average for all

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

trips. In terms of species actually seen on the trip, trips on which grizzly bears and mountain goats were seen were the highest valued. Grizzly bears appear to be more highly valued by wildlife viewers than black bears since the average for trips on which grizzly bears were seen is quite a bit higher than that for trips on which any bears were seen. But trips on which any bears were seen still appear to have an above average value. Trips on which mountain goats, wolves, and whales were seen are the next highest valued. With all these values related to species, one must be aware of the sample sizes on which they are based. Another caveat is that while an observation that trips on which a particular species was seen are valued higher than other trips is one indication that the species might be more highly valued than other species, the difference in value between a trip on which a particular species was seen and trips on which it was not is not solely attributable to that species. Many of these wildlife viewing trips involved more than one species and different combinations of site/trip attributes. More work remains to be done to clarify relative values between species, but trip values on which particular species were sought or seen can be used as one indication of relative value.

Tables A-15 present the same information as Tables A-13 and A-14 broken down by Regions 1, 2, and 3. There were too few trips to Regions 4 and 5 to allow anything close to a meaningful breakdown by species. Average values for all trips to the different regions are given in the breakdown table of net economic value by trip destination region. In comparing trip values by species sought or species seen for particular regions, it is even more important to pay attention to the sample sizes. Many region and species combinations have fewer than 5 trips on which the statistics are based so the statistics are less than robust to say the least. In Region 1, for example, only whales and eagles are based on more than 10 trips. The sample sizes in Regions 2 and 3 are larger, but for many species they are still small. In using the values, one must recognize their statistical limitations.

STATEWIDE BREAKDOWN OF 127 WEIGHTED RESPONSES FROM ALASKA VOTERS  
TAKING PRIMARY PURPOSE WILDLIFE VIEWING TRIPS TO REGION 3

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

**Expenditures and Economic Impact Directly Attributable  
to Wildlife Viewing**

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics****Expenditures and Economic Impact Directly Attributable to Wildlife Viewing**

In contrast to net economic value, or consumer surplus, economic impact measures market transactions related to a particular good, service, or activity. Whereas, consumer surplus measures value net of expenditures, economic impact measures all transactions related to or stimulated by the expenditures made for the good or activity. Note, at the outset, that it is not correct to add consumer surplus and economic impact and call their sum total value of the activity. Economic impact analysis by its nature contains double counting. The purpose of economic impact analysis is to measure all market transactions related to an activity. To the extent that goods are bought and sold more than once, it is appropriate to count them more than once.

When a good or service is purchased from a retailer, the retailer keeps some of the money as profit and uses the rest to pay workers and other business expenses, and to buy more goods to sell. The retailer buys from a wholesaler who uses the proceeds to pay his workers and costs of doing business, and to buy more goods from manufacturers. Manufacturers pay workers and buy inputs to produce more goods. Each sale--consumers buying from retailers, retailers buying from wholesalers, wholesalers buying from manufacturers, and manufacturers buying inputs from other industries--constitutes a valid transaction and is appropriately counted in the economic impact stimulated by the purchase made by a final consumer. Also counted in the impact stimulated by the consumer's purchase are economic transactions made by workers with wages supported by the final consumer's purchase. That is, the workers who manufacture the good, the workers who transport the good to market, and the workers who sell the good are all paid wages. They, in turn, buy goods and services which transactions are also attributable to the final consumer's purchase. The sum of all those transactions is equal to the economic activity generated by the purchase of the good but is much more than the actual expenditure by the final consumer, and may be more than the value the final consumer places on the good. When the purchase of the good by the final consumer is motivated by an activity such as wildlife viewing, all those economic transactions are attributable to wildlife viewing. The purpose of economic impact analysis is neither to measure the economic value of an activity nor to measure expenditures resulting directly from an activity. Its purpose is to track and measure economic transactions stimulated by an activity as those expenditures flow through the economy.

What, then, do the results of an economic impact analysis reveal? They reveal the amount of economic transactions supported by an activity. They can also reveal the number of jobs supported by those economic transactions. By comparison to the base or total economy, the proportion of total transactions in the economy attributable to or supported by the activity being studied can be estimated. If expenditures directly related to an activity were hypothesized to increase or decrease by some amount, an economic impact analysis could estimate the change in total economic transactions throughout the economy.

One component of economic impact attributable to wildlife viewing is equipment and supplies bought related to wildlife viewing, but not attributable to any particular trip. The questionnaire obtained information on those types of expenditures from everyone in the sample. Because our sample of 2,370 is representative (after weighting) of all resident voters, we can estimate total expenditures for the population based on our sample. This was done by inflating the equipment and supplies expenditures by our sample by a factor of 120.019 to inflate from our sample of 2,370 to the population of 284,444 resident voters. Information about equipment and supplies purchased by our respondents is presented in Tables A-16, broken down by demographic characteristics of respondents and A-17,

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

broken down by expenditure category. The per capita annual expenditure on equipment not attributable to any particular trip was \$267, though some were outside Alaska (Tables A-16). The per capita annual expenditure in Alaska by resident voters on wildlife viewing related equipment and supplies, not attributable to any particular trip, observed in our sample was \$190 (Table A-17). Annual expenditures in Alaska by all voters on equipment related to wildlife viewing was an estimated \$54.3 million in 1991. Those equipment and supply purchases were made by all Alaska voters--those who took primary overnight wildlife viewing trips plus those who only took secondary trips and those who only took day trips, and some who may have taken no trips at all but like to feed birds in their backyard. Tables A-18 present the equipment expenditures broken down by expenditure category for each of the 5 regions in the state. The regional totals do not add up to the statewide total because some respondents only told us their purchases were made in Alaska without specifically telling us where in Alaska.

To estimate the total economic impact of overnight primary purpose wildlife viewing trips, we used the detailed information on expenditures for the "Selected Trip" from the survey. To the best of respondents' recollection, those are all the expenditures they made while they were on their Selected Trip. We first inflated the trip expenditure data by a factor of 2.274 (698 trips estimated for the entire voter sample divided by 307 trips in our random subsample of primary purpose wildlife viewing trips--307 respondents gave us information on trip expenditures while only 304 responded to the questions on trip attributes and characteristics) to estimate total trip expenditures for all primary purpose wildlife viewing trips taken by our total voter sample. To estimate trip expenditures for all overnight primary purpose wildlife viewing trips by resident voters, we further inflated the trip expenditure data by a factor of 120.019 (284,444 registered voters in the state divided by 2,370 in our sample). Hence, the data in our detailed trip information was inflated by a factor of 272.923 to estimate trip expenditures for all overnight primary purpose wildlife viewing trips by Alaska voters in 1991. Information about respondents' trip expenditures related to their "Selected Trips" is presented in Tables A-19, broken down by demographic and trip characteristics and Table A-20, broken down by expenditure category. The average expenditure related to primary purpose trips was \$505, though some expenditures were outside Alaska (Tables A-19). The average expenditure in Alaska on an overnight primary purpose wildlife viewing trip was \$499 (Table A-20). Expenditures in Alaska related to primary wildlife viewing trips amounted to \$41.8 million in 1991. Tables A-21 present trip expenditures in each of the 5 regions of the state. Again, the regional totals do not add up to the statewide total because some respondents only told us that their purchases were made in Alaska without telling us where in Alaska.

A few words are in order to help understand and interpret the economic impact tables (A-22 to A-24). "Final demand" refers to purchases of goods and services by households and other final consumers of goods and services. It does not include purchases by industries for use as intermediate goods or services, i.e., to be used as inputs in another industry's production of goods and services. "Total industry output" (TIO) includes both output consumed as final demand and output used as intermediate products by other industries. Hence, TIO is Final Demand plus demand by industries for use as inputs to their production processes. "Direct effect" refers to the initial expenditure on goods and services related to wildlife viewing. All the expenditures reported in the resident voter survey contribute to the direct effect, because they are expenditures made by people related to wildlife viewing. Note that direct effect does not equal the sum of all the expenditures reported in Tables A-16 to A-21. It is close to the sum of expenditures, however.<sup>1</sup> Because direct effects are the first round of expenditures and are assumed to be made by final consumers, all demand is final demand so total industry output is equal to final demand in the direct effects. "Indirect effect" refers to changes in production within industries necessitated by the direct effects. In order to sell the output demanded

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

and purchased by wildlife viewers, industries need to purchase inputs and employ workers to produce those goods and services. All indirect effects are composed of consumption by industries for use as intermediate products or inputs. Because of that, final demand in the indirect effects is equal to 0. "Induced effects" are changes in household spending caused by changes in regional employment generated by the direct and indirect effects. Direct and indirect effects require workers to produce and sell the output that is being sold and consumed. Wages and salaries are paid to those workers who, in turn, spend it on goods and services, housing, and the whole variety of goods people buy. The expenditures by those workers make up the induced effect. "Expenditure multipliers" are the ratio of total effect (total effect total industry output) to direct effect. The multiplier estimates the total amount of economic transactions resulting from 1 dollar of direct effect.

Table A-22 displays information on the total Alaskan economy for 1990 to give some perspective to the numbers reported in Table A-23 on economic impact. That is, Table A-22 presents information on the total statewide economy--independent of anything to do with wildlife viewing. Note that the base economy for the state (and for each region) is expressed in 1990 dollars and the impacts are expressed in 1991 dollars. Our assumption is that the economy did not change much between 1990 and 1991. Table A-23 shows the estimated economic activity attributable to wildlife viewing by resident voters. The direct effect of resident wildlife viewers' expenditures (on equipment and primary wildlife viewing trips) in Alaska in 1991 was \$92.29 million and the total effect was \$135.36 million, which accounted for 0.4% of the Alaskan economy in 1991. That is, resident wildlife viewers spent \$92.29 million in Alaska in 1991 which resulted in \$135.36 million in total economic activity as it circulated through the Alaskan economy. Resident wildlife viewers' expenditures supported 2,787 jobs (0.9% of the jobs in the Alaskan economy). The expenditure multiplier was 1.47. Every dollar spent by resident wildlife viewers contributes another 47 cents (or 47%) in economic activity in Alaska. Tables A-24 present information on the base economy and economic activity attributable to wildlife viewing in each of the 5 regions within Alaska.

Table A-25 presents information on the extent of ownership of various "capital goods" or "big ticket" items that might be related to wildlife viewing. These questions were asked only of respondents who had at some time been on an outing that included wildlife viewing as one of the planned activities, a subsample of 1,630 respondents. For example, 5.9% of the respondents own an airplane; 1.5% of respondents said wildlife viewing was a main reason for the purchase of their airplane. That 1.5% refers to the total subsample and not just those owning airplanes. Looking specifically at those owning airplanes, 25.4% of respondents owning airplanes (1.5% divided by 5.9%) said wildlife viewing was a main reason for purchase of their airplane. Likewise, 23.7% of Alaska voters who have taken a trip on which wildlife viewing was a planned activity own an off-road vehicle; 3.2% of those voters (or 13.5% of those owning off-road vehicles) said wildlife viewing was a main reason for their purchase. It is not clear how respondents interpreted the questions on when and where they purchased the capital type goods; more work needs to be done to disentangle just what proportion of these goods are purchased related to wildlife viewing in a given year along with their cost and place of purchase. In any case, a conclusion that can be drawn from these tables is that a significant minority of these capital type goods can be attributed to wildlife viewing.

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics****Endnotes**

1. There are two reasons for this difference between direct effect and actual expenditures. First, the scenarios (scenarios are explained further in the input-output model appendix) we used to incorporate expenditures into the structural model of the economy were set up on a "commodity basis" rather than an "industry basis." That means we do not require the good or service to be produced by the industry into whose primary product it falls. We explicitly allow for "byproducts" (which are goods and services produced by an industry not in the primary industry group for a particular product). An example of byproducts might be a brewery which produces some quantity of bottled water. Bottled water is not the primary product of the brewery, nor are breweries and bottled water manufacturers in the same industry group, so it is considered a byproduct. Using a commodity basis, the model would recognize that some bottled water in a given region could come from the brewery. Using an industry basis, bottled water from a brewery would be ignored. Implicit in that consideration of byproducts, though, is that some commodities might be produced by "nonindustry production," i.e., some commodities may be produced by households or government or some other institution, which would not be picked up by the model as being from any industry. The commodity basis is more realistic than the industry basis, but using it results in some direct effect being lost. Second, some small portion of the expenditures leak out of the regional economy immediately. Examples of such leakage are wages and profits from guide-outfitters paid to nonresident employees or owners, and federal taxes paid for hunting stamps, etc. Also included in this leakage are commodities attributed to industries not present in the regional economy. This is analogous to imports, the margin taken by local wholesalers or retailers are in the direct effect, but some of the expenditure immediately leaks out of the region. The difference between direct effect and actual expenditure due to this second reason is more pronounced as the scale of the model gets smaller. Therefore, the difference between direct effect and actual expenditures is relatively larger for the regional models than for the statewide model.

## Technical Notes on Input-Output Analysis and Models for Interested Readers

Input-output (IO) analysis shows how the output of each industry in an economy is distributed among other industries and sectors of the economy. At the same time, it shows the inputs each industry uses from other industries and sectors in the economy. The main input-output table, the core of the system, is called the transactions table. The transactions table covers a specific period of time. In this discussion, assume the table covers one year as is commonly the case. Transactions in the table are generally valued in terms of producer's prices as opposed to consumer prices.

Table N-1 (immediately following this appendix) is a hypothetical transactions table, taken from Miernyk's book on input-output analysis. It will be used to illustrate the basic components of an input-output analysis. The rows in the transactions table show the output sold by each industry or sector along the left side of the table to each industry and sector across the top of the table. For example, Industry A sold \$15 million of output to Industry B and \$5 million to Industry E. The columns show the purchases made by each industry or sector along the top of the table from the industries and sectors along the left side. For example, Industry C bought \$7 million of product from Industry B and \$2 million from Industry D. The intersection of a row and column represents intraindustry or intrasector transactions. For example, firms in Industry A transferred \$10 million of goods among themselves, firms in Industry F transferred \$6 million, and there were \$1 million in intragovernmental transfers. Reading across a row shows the amount of output that a particular industry or sector sold to each industry and sector across the top of the table. Reading down a column shows the amount of input that a particular industry or sector purchased from each industry and sector on the left side of the table.

The transactions table is composed of several parts. Rows and columns 1-6 are set off as a block and labelled the processing sector. This part of the table contains the industries in the economy that produce goods and services. Among them would be agriculture, manufacturing industries, utilities, commercial services, wholesale and retail trade, etc. This part of the table is highly simplified. In practice, one would expect this part of the table to contain 50 or more industries. The concepts are the same though. If one understands this table he or she can understand any transactions table.

Rows 7-11 make up the payments sector. Row 7 is gross inventory depletion. That shows the amount of previously accumulated stocks of raw materials, intermediate goods, or finished products used up during the year--the dollar amount that inventories were drawn down. Row 8 is the value of imports purchased by each industry or sector. Row 9 shows payments to the government. These are various taxes and payments that industries or sectors pay to the government. It may simplify one's thinking if these are considered to represent the value of government services received by each industry or sector--the services government sells. Row 9 shows depreciation allowance. Depreciation allowances are set aside by industries, in theory, to approximate the cost of plant and equipment used up in their production of goods and services. Row 10 is households. This row represents the wages, salaries, dividends, interest, and other payments made to households by each industry or sector across the top of the table.

Columns 7-11 make up the final demand sector. This sector is of special importance because it is the autonomous sector. Changes here are transmitted throughout the rest of the table. The transactions that an economic impact analysis tracks through the economy originate in the final demand sector. Column 7 shows gross inventory accumulation. That is the value of additions to inventories held by each industry or sector on the left side of the table. Retailers and wholesalers keep some stock on hand to provide for immediate delivery. Manufacturers keep some of their output on hand for delivery on short notice. Column 7 shows the value of additions made to inventories during the year, regardless of where they are held--at the factory or by retailers or wholesalers. Column 8 shows the value of exports from each industry or sector during the year. (Note that, in regional models, households can export labor services across regional boundaries (likewise, industries can import labor services); and things like management and technical consulting services can be exported or imported.) Column 9 shows the value of government purchases made by all levels of government. The intersection of the government row (9) and column (also 9) shows intragovernmental transfers or transactions. Column 10 shows gross private capital formation. That is the value of sales from each industry or sector on the left side of the table to buyers who use their purchase for private capital formation. All entries in the transactions table except those in column 10 are in the "current account." Column

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

10 represents all purchases by all buyers for replacement of or addition to plant and equipment, and any other purchases entered in the "capital account." In short, column 10 shows the value of replacements of or additions to the capital stock in the region. Column 11 is households. This column shows the purchase of finished goods and services by their ultimate consumers. When a person buys a candy bar or a washing machine, it shows up in this column.

Row 12, total gross outlays, shows the total value of inputs to each industry and sector across the top of the table. It is the sum of the column entries. The total value of purchases by Industry D is \$39 million, for example. Column 12, total gross output, shows the receipts from all outputs. Input-output is essentially a system of double-entry bookkeeping. Within each industry in the processing sector, all of the receipts from sales are paid out for goods and services purchased from other industries and sectors. Thus, in the processing sector, total gross output equals total gross outlays. That is not true in the remaining rows and columns. There is no reason to expect imports and exports to balance in a given year, or for inventory depletion to equal inventory accumulation. But, the differences must cancel out when we view the economy as a whole. Total output equals total outlay for the economy as a whole.

Some examples might be helpful. Consider the inputs side by looking at Column 3. Industry C purchased inputs worth \$1 million from Industry A, \$7 million from Industry B, transferred \$8 million of goods between themselves (Industry C), purchased \$2 million from Industry D, \$1 million from Industry E, and \$7 million from Industry F. They used \$1 million worth of previously accumulated inventory to produce their output, imported \$3 million worth of inputs, paid \$2 million in taxes and other payments to the government, used up \$1 million worth of plant and equipment in their production process, and bought \$7 million worth of services from households for labor, etc. The total outlay of Industry C is \$40 million.

Next, consider the output side by looking at Row 3. Industry C sold \$7 million worth of goods to Industry A, \$2 million to Industry B, transferred \$8 million of goods among members of Industry C, sold \$1 million to Industry D, \$5 million to Industry E, and \$3 million to Industry F. Output of Industry C was added to inventories in the amount of \$2 million, Industry C exported \$3 million worth of their output, sold \$1 million to the government, Industry C output was used to replace or increase the private capital stock in the amount of \$3 million, and the industry sold \$5 million of output directly to households. The total gross output of Industry C is \$40 million, which is equal to their total gross outlays.

Third, consider Row 8. Imports in the amount of \$2 million were sold to Industry A, \$1 million to Industry B, and \$3 million to Industry C. No imports were sold to Industry D, but \$3 million were sold to Industry E, and \$2 million to Industry F. No imports were added to inventories, no imports were exported, and none were bought by government or added to the private capital stock during the year. Households bought \$2 million worth of imported goods and services. Imports accounted for \$13 million in transactions during the year. Column 8 shows that exports totalled \$23 million, so the economy shows a positive trade balance of \$10 million for the year. These examples should illustrate the workings of the transactions table.

The total output shown in a transactions table is not the same as Gross National Product (GNP) or Gross Regional Product (GRP). Essentially this is because GNP strives to eliminate double counting to arrive at the total value of goods and services produced in a year. Input-output strives to account for all transactions. Some goods and services enter into more than one transaction, and so are counted twice. That is not a problem, as long as one remembers what the numbers mean.

A key point about the transactions table is that it is very flexible. The only rules are that there must be one row for each column in the processing sector, and that, in the processing sector, total outlay equals total output. Industries can be aggregated or disaggregated to suit the analysis. There is an advantage to disaggregation (detailed breakdown of industries and sectors) if the table is used for forecasting. For example, a detailed industrial classification would reveal where bottlenecks might occur during an expansion of production. It might be useful to aggregate sectors when attention is to be focused on a few particular sectors. As a general rule, however, one should strive for maximum disaggregation when constructing the basic transactions table. Industries and sectors can always be aggregated later.

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

Likewise, sectors can be moved around within the table. For example, activities in the processing sector can be shifted to final demand if one is interested in analyzing the interindustry effects of changes in a particular industry. If one wanted to know how spending on housing construction affected the economy, the housing construction industry could be moved to final demand. Such alterations would depend on the analytical use for which the model is intended. Once a transactions table is built, it can be altered and used for many different analyses.

Generally, "industries" refer to aggregates of firms producing similar products, and "sectors" refer to the kinds of markets that industries serve. Firms are classified into industries on the basis of their principal product, but overlap and byproducts must be taken into consideration when analyzing particular industries. For example, suppose Firm Q manufactures automobiles as its primary product, but also manufactures TV sets and refrigerators, referred to as byproducts. Firm Q would be classified into the auto industry. If the refrigerator industry were being analyzed, however, that portion of Firm Q's activities devoted to the production of refrigerators must be included in the analysis. Overlapping and byproducts can be a problem encountered when one attempts to measure employment or production in individual industries. It also occurs when looking at production in a particular region. More of a given commodity/product might be produced locally than might appear by looking only at the principal industry. Or a product might be produced locally even though the particular principal industry does not appear in the region. Hence, looking only at principal industries is not enough. An example of byproducts might be a brewery which produces some quantity of bottled water. Bottled water is not the primary product of the brewery, nor are breweries and bottled water manufacturers in the same industry group, so bottled water would be considered a byproduct of the brewery. Even though there are no bottled water manufacturers in a given region some bottled water might be produced locally by the brewery. Data on byproducts and overlap are available and generally incorporated into large scale IO models.

Input-output tables generally use the Standard Industrial Classification (SIC) system or the Bureau of Economic Analysis (BEA) Industry Classification System as the basis for aggregation or disaggregation--2-digit SIC industries, 4-digit SIC industries, etc. The SIC codes and BEA codes are related and it is not difficult to crosswalk between them.

After a transactions (or input-output) table has been constructed for a given year, a table of "technical" or "input" coefficients can be developed from it. Input coefficients show the amounts of inputs required from each industry to produce one dollar's worth of output in a given industry. Input coefficients are calculated for processing sector industries only.

Two steps are required to calculate input coefficients. First, gross output is adjusted by subtracting inventory depletion during the period to obtain adjusted gross output. Since gross outlays in the processing sector are equal to gross output in that sector, adjusted gross outputs can be computed by subtracting row 7 from row 12 in Table N-1. Second, all entries in each industry's column (but only those in the processing sector block) are divided by the adjusted gross output of that industry. Table N-2 shows the technical or input coefficients. For example, the adjusted gross output of Industry A is equal to 63 (total gross outlay minus inventory depletion). Each entry in the A column of the processing sector then is divided by 63. Table N-2 shows that each dollar's worth of Industry A output will require direct purchases of 8 cents from Industry B, 11 cents from Industry C, 17 cents from Industry D, 6 cents from Industry E, 3 cents from Industry F, and intraindustry transactions of 16 cents. Inputs from the processing sector make up 61 cents of each dollar of Industry A's output.

If the input coefficients remain constant from year to year or can be adjusted on the basis of new information, one can calculate the amount of direct purchases required from each industry as a result of an increase (or decrease) in the output of one or more industries in the economy.

Table N-2 contains information about direct purchases. That is not the total addition to output resulting from additional sales of one industry's output, however. If final demand for Industry A's output is increased, Industry A must directly purchase more of the output of the other industries (which are inputs to A's production of output). But for those other industries to sell more of their output to A, they must increase their production, so they must buy more of the other industries' outputs that are inputs to their own production, and

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

so on. One could use the input coefficients matrix to iteratively calculate those indirect effects. If demand for the output of Industry A increases by \$1, A will need to boost output by \$1.16 because of the 16 cents in intraindustry transactions needed to produce \$1 worth of output. Sales from B to A increase by 9 cents ( $\$1.16 \times .08$ ), sales from C to A increase by 13 cents ( $\$1.16 \times .11$ ), etc. Going through each industry like that and summing the additions to output would eventually result in the amount of the total effect.

Fortunately, an easier way exists. The method involves taking the difference between an identity matrix and the input coefficient matrix and from that computing a transposed inverse matrix--a tractable problem on a computer. The result is the total requirements matrix, Table N-3, which shows the total dollar production directly and indirectly required from the industries across the top for each dollar of delivery to final demand by the industries at the left. Each time Industry A sells \$1 of output to a final demand sector, its own output increases by that \$1 plus an additional 38 cents, B's output increases by 25 cents, C's output increases by 28 cents, and so on across the row. (These effects are unrealistically large in response to a \$1 increase in final demand. In a real input-output model, the entries in the total requirements matrix will have smaller values and greater variation. The example worked out this way because small numbers and few zeroes were used in the original transactions table.)

An actual total requirements matrix might show, for example, that the output of the agricultural industry depends on the demand for processed foods, tobacco, textiles, leather products, and chemicals. Thus, there will be fairly large entries in the cells where the agriculture column (remember, the total requirements matrix was transposed from the transactions matrix) intersects the rows of those industries (meaning output of agricultural products will go up by a relatively large amount when demand for the output of those industries increases). Most apparel products, on the other hand, are sold directly to final consumers, so the entries in the apparel column will be relatively small (meaning that output of the apparel industry will not go up by much in response to increased demand for other products since apparel is not an input to many other industries). In regional applications of input-output modelling, the effects shown in the total requirements matrix will be smaller if a lot of the inputs used by industries are imported.

The information in the total requirements matrix, when supplemented with information on households, is the basis from which multipliers are calculated. Multipliers summarize the total effect of an increase in demand for the output of a particular industry per dollar of direct effect.

IMPLAN, the input-output model used for the analyses of the Alaska Wildlife User Surveys, is composed of 528 industries and sectors at the 4-digit SIC level. The data comprising the transactions table and associated final demands are based on the U.S. Department of Commerce, Bureau of Economic Analysis national input-output tables. The national composition matrices of inputs used in industry production (i.e., the mix of inputs industries use to produce their output) and of commodity outputs (the mix of commodities that industries produce) are adjusted using state level data. That means that while the basic structure and technology used by industries is assumed to be a national average, the output levels and levels of regionally purchased inputs are calibrated at the state level.

The base year of the IMPLAN model is 1990, meaning that we assume the structure of the Alaskan economy was unchanged between 1990 and 1991, the year for which the surveys collected data. Given that changes in economic structure occur relatively slow and that IMPLAN uses "national average" technology relationships, that is not a bad assumption. IMPLAN is a linear model meaning that changes in the level of economic transactions have the same effect regardless of whether they are increases or decreases relative to the status quo. That feature of the model allows us to construct "scenarios" composed of the expenditures related to wildlife activities and estimate the total amount of economic activity those expenditures support.

IMPLAN is nothing more than a structural model of an economy--in our case, the Alaskan economy and the five substate regional economies. There is no industry or sector in that model called wildlife viewing or hunting or recreation. Hence, the model itself says nothing about how such pursuits contribute to or affect the economy. The way to estimate those effects or contributions, in IMPLAN, is to set up "Scenarios" which are composed of "Activities" which, in turn, are composed of "Events."

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

The distinctions between Scenarios, Activities, and Events are somewhat artificial and they can be used however best suits a particular analysis. As an example, though, consider a scenario called "Recreation." Activities included in the recreation scenario might include "Camping," "Fishing," "Bowling," and "Symphony Concerts." Each of those activities is composed of a set of expenditures, or events, that together constitute the activity. The aggregation of the activities, in turn, constitute the scenario called recreation. Events in the camping activity might include renting a tent, buying groceries, travelling to a national park, stopping to buy gas along the way, buying a camping permit, and fixing the flat tire you got on the dirt road in the park. Expenditures for each of those items are broken down to industries or sectors from which they come. Tent rental would be attributed to IMPLAN Industry 488 (Amusement and Recreation Services not elsewhere classified), fixing the flat tire would be attributed to Industry 479 (Automobile Repair and Services). Some expenditures, groceries is one such item, are divided between and attributed to several industries--dairy products (Industry 1), fruits (Industry 16), vegetables (Industry 18), etc. Each of those industries include a set of "margins" that specify how much of the expenditures on those items go to retailers, wholesalers, transportation, etc. so those aspects of bringing a product to market are included in the model.

Attributing expenditures among industries is one area where empirical input-output analysis is an inexact science and different assumptions could result in differences in final estimates of economic activity. There are some data sources that can help in making those allocations, but there is room for individual interpretation. This is a further reminder that economic impact estimates are just that--estimates. We spent considerable effort and think we did a good job allocating expenditures to industries, but our estimates, as are all other estimates of economic activity, are subject to those allocations.

Table N-1  
Hypothetical Transaction Table  
Industry Purchasing

STATEWIDE BREAKDOWN OF 1,630 WEIGHTED RESPONSES FROM ALASKA VOTERS  
WHO HAVE EVER GONE ON AN OUTING WITH WILDLIFE VIEWING AS A PLANNED ACTIVITY

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

**Characteristics of Secondary Wildlife Viewing Trip**

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics****A Brief Summary of Characteristics of Secondary Wildlife Viewing Trips**

The designation of a wildlife viewing trip as a secondary wildlife viewing trip (trips on which wildlife viewing activities were a secondary purpose of the trip) was based on the respondents' consideration of the question "Would I have made this trip to this place if I had not been planning to view wildlife?" An answer of NO for any particular trip resulted in designation as a primary trip. An answer of YES resulted in designation as a secondary trip. As was the case for primary wildlife viewing trips, our estimates of secondary wildlife viewing trips are expected to be conservative for two reasons: 1) There was space on the table in the survey for up to 8 trips. To the extent that people took more than 8 secondary trips, our estimate is low. 2) Our main focus was on primary trips so we specifically directed respondents to list their primary trips first. To the extent there was little or no room to list all their secondary trips after primary trips were listed, our estimate is low. Because we directed respondents to choose one of their primary trips as the "selected trip" if they had any primary trips at all, the only secondary selected trips in our detailed trip information were taken by people who had no primary trips in 1991. We are assuming that secondary wildlife viewing trips taken by people who had no primary wildlife viewing trips are representative of all secondary trips. That may or may not be true. It is a testable hypothesis, but our data do not contain information with which we can test it. If the assumption is not true and secondary trips by people with no primary wildlife viewing trips are somehow different from those taken by people who also took primary trips, then the discussion of trip characteristics and economics in this and the following two sections only applies to the population of voters who took secondary wildlife viewing trips but no primary trips in 1991.

Tables A-26 show the distribution of number of secondary wildlife viewing trips broken down by gender, age category of respondent, and the rest of the demographic characteristics, as well as showing the distribution for the entire voter sample. Zero secondary wildlife viewing trips were listed by 78% of the voter sample. The average number of secondary wildlife viewing trips across the entire sample of 2,370 voters was 0.5. Using this information we calculate 1,195 secondary wildlife viewing trips taken by 524 people in our sample of voters--about 22% of the sample took one or more secondary trips. (Remember that the average was to more than the two decimal places shown in the summary, so our estimated totals differ a little from those obtained using the two decimal place results.) Expanding this to the entire Voter population, we estimate 143,423 secondary wildlife viewing trips taken by 62,890 people.

The remainder of the tables in this section are based on the subsample of the voter population who provided detailed information on one of their secondary wildlife viewing trips. That subsample contains detailed information on 285 secondary trips (297 trips after the weights were applied). Tables A-27 show the trip destination region in total and by several breakdowns. The majority of secondary wildlife viewing trips were to Region 2 (60.5%). Regions 3 and 1 are the destinations on most of the rest of the trips, with 19.4% and 9.0%, respectively. Tables A-28 and A-29 show the wildlife species sought and seen, respectively, on the selected secondary trips. The most commonly mentioned species sought were moose (44.6% of the trips), marine mammals (28.1% for marine mammals including whales and 16.1% specifically for whales), caribou (18.8%), sheep (17.5%), and raptors (17.8% for all raptors and 15.8% specifically for eagles). The list of species seen is similar: moose (seen on 60.3% of trips), marine mammals (27.9% for all marine mammals and 13.6% for whales), caribou (21.2%), sheep (25.4%), raptors (42.8% for all raptors and 40.0% for eagles). Bears were seen on 22.5% of secondary trips, grizzly bears, specifically, were seen on 3.9% of the trips.

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

Tables A-30 through A-35 describe several characteristics of secondary wildlife viewing trips. Number of people in the party is shown in Tables A-30 (an average of 3.9 people including the respondent, over all secondary trips). People on secondary trips spent an average of 3.93 nights away from home on their trip (Tables A-31). They spent an average of 2.5 days and 4.3 hours per day actually looking for or viewing wildlife on their trip (Tables A-32 and A-33). The most popular month for secondary wildlife viewing trips was July (25.8% of the trips), followed by June (22.0%), August (17.8%), May (11.5%), and September (8.2%) as shown in Tables A-34. Tables A-35 show frequency breakdowns for several attributes of secondary trips. On 59.7% of secondary trips respondents saw many different kinds of wildlife, 54.3% of the respondents saw a lot of wildlife even if they were the same kind. Particularly large individual animals were seen on 49.6% of the secondary trips, 37.4% of the respondents saw unique or unusual wildlife, and 68.9% reported getting close to wildlife. The wildlife viewing site was located in a remote area on 37.9% of the trips, 37.4% of the respondents saw many other people at the site, and 55.0% had road access all the way to the site. Many off-road vehicles were seen or heard by 9.3% of the respondents, and power boats were seen or heard by 21.5%. Public use cabins were encountered on 14.0% of the secondary trips, public boat moorings or launch sites on 30.5%, and public air strips on 21.4% of the trips. Hiking trails were encountered on 56.9% of secondary trips, information centers or naturalists on 35.2%, and public campgrounds on 51.9% of the trips. Active mines were seen on 6.3% of secondary wildlife viewing trips; 12.9% of the trips encountered old clearcuts and 5.7% encountered recent clearcuts, while 25.1% of the secondary trips encountered commercial fishing activity. As was noted for the primary wildlife viewing trips, there is undoubtedly some self selection going on and people may take trips to sites where they are likely to see wildlife or encounter facilities they value and avoid sites where they are more likely to encounter conditions that detract from their trip.

STATEWIDE BREAKDOWN OF 285 WEIGHTED RESPONSES FROM ALASKA VOTERS  
TAKING SECONDARY PURPOSE WILDLIFE VIEWING TRIPS

MULTIPLE RESPONSES WERE POSSIBLE SO COLUMN PERCENTS DO NOT SUM TO 100

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

**The Net Economic Value of Secondary Wildlife Viewing Trips**

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics****Net Economic Value and Secondary Wildlife Viewing Trips**

Tables A-36 through A-40 focus on the net economic value, or net benefit, received by wildlife viewers from their secondary wildlife viewing trip. One must be careful in interpreting this net economic value. Because the primary purpose of the trip was not wildlife viewing, not all of the value can be attributed to wildlife. Some part of the value, however, might be attributable to wildlife or to a particular species. Without more information, one cannot say how much of the value of a secondary trip might be attributable to wildlife. The value attributable to wildlife, however, is bounded by zero and the total value of the trip.

Tables A-36 indicate that 91.7% of the respondents felt their trip was worth the money they paid, meaning they received some positive net benefit from their trip. Tables A-37 present the frequency distributions of net economic value broken down by demographic and trip characteristics. The average net value placed on a secondary wildlife viewing trip was \$93, with a median of \$50. About 31% of the respondents placed a net value of zero on their trip. As was the case with primary trip respondents, some secondary trip respondents said their trip was worth exactly what they paid and no more--true zero net value. Others responded zero because they could not put a number on their net value. For these latter cases, their true net value might be greater than zero, but a conservative approach in benefits estimation is to regard them as zero.

Tables A-38 and A-39 show net economic value broken down by species sought and species seen on the secondary trip. In terms of species sought, trips seeking wolves, whales, and sheep appear to have higher net values than other trips. In terms of species seen, trips on which whales, any kind of bear, and mountain goats were seen appear to have higher net values than other trips. When looking at net values broken down by species, one must pay careful attention to the row labeled Nonmissing Cases. Averages for several of the species are based on small sample sizes and caution must be exercised in putting emphasis on such values. Finally, Tables A-40 show the same breakdowns--species sought and species seen--for Regions 1, 2, and 3. Regions 4 and 5 had too few cases to allow a meaningful breakdown by species. The average net economic value over all trips to Region 1 was \$84 (from Tables A-37 for Trip Destination Region). None of the individual species sought had enough cases to come to a conclusion. In terms of species seen on trips to Region 1, there are a few more cases, but the subsamples are still very small. The average net value of secondary trips to Region 2 was \$95. Eagles, whales, wolves, and mountain goats appear to be associated with higher valued trips in terms of species sought--though some of them are based on small numbers of cases. In terms of species seen, bears, goats, whales, and eagles appear to be associated with higher valued trips. Secondary trips to Region 3 had an average net economic value of \$91. Sheep and moose are associated with higher valued trips when one breaks trips down by species sought. Again, be aware of small sample sizes. When Region 3 trips are broken down by species seen, bears, caribou, moose, and sheep are associated with higher than average valued trips.

STATEWIDE BREAKDOWN OF 6 WEIGHTED RESPONSES FROM ALASKA VOTERS  
TAKING SECONDARY PURPOSE WILDLIFE VIEWING TRIPS TO REGION 5

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

**Expenditures and Economic Activity Generated by  
Secondary Wildlife Viewing Trips**

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics****Expenditures and Economic Activity  
Generated by Secondary Wildlife Viewing Trips**

Tables A-41 through A-46 describe the economic activity generated by secondary wildlife viewing trips. Again, a caveat is in order. This economic activity is not directly attributable to wildlife. For primary wildlife viewing trips, because wildlife viewing was the primary purpose of the trip and it determined the trip destination, economic activity generated by primary trips could be attributed to wildlife. Not so in the case of secondary trips. One could assume that some proportion of secondary trip economic activity is attributable to wildlife, but a specific and explicit assumption is required to do that. Hence, one must be very careful in interpreting these expenditures in relation to wildlife.

Tables A-41 shows expenditures on secondary wildlife viewing trips broken down by demographic and trip characteristics. Over all secondary trips, an average of \$367 was spent per trip. Table A-42 breaks down those trip expenditures by expenditure category and shows an average of \$346 per trip spent in Alaska related to secondary wildlife viewing trips. Over all secondary wildlife viewing trips a total of \$49.6 million was spent in Alaska in 1991. But, as we have warned in several places, those expenditures cannot be directly and totally attributed to wildlife viewing. Table A-43 shows the estimated total expenditures on all secondary trips made in each region by expenditure category.

Table A-44 presents the total base economy for the State of Alaska in terms of final demand, total industry output, and employment. These base numbers provide the context for the economic activity supported by expenditures made on secondary wildlife viewing trips. Again, note that the base economy for the state (and for each region) is expressed in 1990 dollars. The assumption made is that the Alaskan economy did not change much between 1990 and 1991. Table A-45 shows that direct effects of \$43.67 million result statewide from secondary wildlife viewing trips, accounting for 755 jobs. When indirect and induced effects of those expenditures are included, the total effect of secondary wildlife viewing trips on the Alaskan economy is \$52.8423 million in final demand, \$61.9592 million in total industry output, and 1,047 jobs. That accounts for 0.18%, 0.20%, and 0.32%, respectively, of the total activity in the Alaskan economy. The expenditure multiplier for secondary wildlife viewing trips is 1.42. But, as was explained above, all this economic activity cannot be directly attributed to wildlife. Table A-46 presents similar information for each region.

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

**Potential Demand for Wildlife Viewing**

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics****Exploring Potential Demand for New Wildlife Viewing Sites**

A somewhat unique part of the Alaska Wildlife User Surveys were the scenarios describing, in very basic terms, several hypothetical wildlife viewing sites aimed at different species. (The actual descriptions can be seen in the survey instrument presented at the end of this report.) Respondents were asked how often they thought they might take a day trip over the next 5 years to visit a site where they could see specified species of wildlife if it cost a specified amount. One must be careful in interpreting the information derived from these scenarios because: (1) the scenarios are only loosely specified in terms of site characteristics and access, and there is room for individual interpretation between respondents as to the actual viewing experience, (2) they imply a guaranteed level of wildlife viewing--a herd of caribou, several Dall sheep, a large concentration of eagles--that is, again, open to differences in interpretation between respondents, (3) they are hypothetical sites, which may or may not be believable to respondents, (4) the specification of day trips may or may not be viewed as realistic by some respondents. With these caveats in mind, though, the scenarios can provide useful information on potential demand for new or enhanced/expanded wildlife viewing sites, and on the relative values that Alaska voters place on different species.

Based on prior information, we excluded Native Americans from these tables. The literature on contingent valuation surveys, which these scenarios fall into, applied to other cultural groups--i.e. non-Western industrialized societies--is very much in its infancy. A few studies have been done (Shyamsundar and Kramer 1993, Whittington et al. 1990) but the issues are far from resolved. It is our feeling that people from other cultural groups are likely to have trouble answering the kinds of contingent valuation questions typically posed. The questions and contingent valuation mechanisms used to date are not robust to changes in the underlying cultural mindset of the group to which they are posed. Hence, Native Americans were excluded from the tables in this section. Based on our survey, just over 80% of Alaska voters (227,675 people) are in this non-Native American subsample.

Tables A-47 present the distribution of responses for each of the scenarios. The dollar amounts used in the scenarios (which we will refer to as bids) were randomly assigned from a selected distribution of values and different in each questionnaire and scenario. For ease of presentation, they are collapsed into \$50 increments in Tables A-47. The range of values differed between scenarios, as is evident from looking at how high the range of values extends for each scenario. The column percentages in the TOTAL column for each scenario show the proportion of bids falling into each of the \$50 increments across the sample. The distributions were set up to have more bids in the lower regions of the range and fewer at the higher regions. The general trend for each of the scenarios is an increasing proportion of "never" responses as the dollar bid increases. That is as expected from basic economic theory. Additionally, the proportion of "more than once" responses seems to fall off faster than the "at least once" responses." Again, this is as expected.

One way to interpret and use Tables A-47 is to look at a particular scenario and consider the potential demand at any given cost level to access the site. For example, if a site were opened at which a herd of caribou could be viewed and it cost \$51 to visit the site, we would expect at least 48.6% of Alaska voters (110,650 people given that there are 227,675 in the non-Native American subsample of Alaska voters) to visit the site over a 5 year period--35.3% said they would visit at least once and 13.3% said they would visit more than once. If it cost \$101 to visit the site, we would expect about 45.7% of Alaska voters (104,047) to visit the site over a 5 year period. If it cost \$451 to visit the site, about 28.4% of Alaska voters (64,660 people) would be expected to visit the site. We say "at least" because some of those people would be expected to visit the site more than once. In other words, 104,047 Alaska

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

voters would be expected to use and benefit from a caribou viewing site if it cost \$101 to access the site--some people more than once.

The responses in Tables A-47 are based on all the responses to all the bids in the designated range. That is, the "at least once" responses are tallied from all bids ranging from \$51 to \$100 (and all integer values within the range were equally likely to be selected) to arrive at the row percent of 35.3% for the caribou site. Likewise, the "more than once" bids are tallied to arrive at the row percent of 13.3% for bids ranging from \$51 to \$100, and the same for the 50.5% reported for the "never" response. Hence, we expect the reported row percents to be conservative estimates at the lower end of the designated range, and somewhat overestimated at the upper end of the range. They are likely to be most accurate in the middle of the range. Based on this line of reasoning, the expected visitation described in the previous paragraph could be thought of as a conservative estimate. Another approach might be to consider the row percents for each range of bids to be applicable to the midpoint of the range and base visitation estimates on those cost amounts and percentages.

A caveat to the uses illustrated above is to consider the sample size at each bid range. The \$51 to \$100 range of bids contained 9.8% of the responses, so the row percents are based on a subsample of 186 people (9.8% of 1,897 respondents in the total voter sample who were not Native American). Responses in the \$501 to \$550 range of bids, on the other hand, are based on a subsample of about 32 people (1.7% of 1,897). In the range of sample sizes we are dealing with, larger subsamples imply greater reliability of results.

Table A-48 shows the means of the estimated distributions of values, based on the responses to the scenarios, broken down by several characteristics. The "at least once" responses and "more than once" responses were collapsed into a single "yes" category. Then the "never" and "yes" responses were used in a logistic regression with the bid dollar amount as the independent variable. The estimated distributions are the probabilities of a "yes" response to the question of whether the respondent would visit the specified site as a function of bid amount and a constant term. They represent cumulative distribution functions for the gross values of the different sites represented in the scenarios. Means were calculated from those estimated distributions and are displayed in Table A-48 for each scenario. The calculation of the mean was carried out to the dollar amount at which the probability of a "yes" response was 1%, at which point the distribution was truncated. The interpretation of these mean values is that they represent the average gross value placed on one day trip over the next 5 years to a site at which the respondent can view the specified wildlife species. The values are gross because they represent, on average, the maximum amount an individual would be willing to pay to visit the site--they contain both the trip expenses and consumer surplus amount that were discussed in the Net Value of Selected Trip sections.

The top row of Table A-48 shows the estimated mean values for each type of viewing site based on the complete subsample of non-Native American Alaska voters. They range from \$125 for a day trip to a moose viewing site to \$485 for a day trip to a site at which a large concentration of grizzly bears can be seen. Based on the estimated distributions, the sites for viewing grizzly bears, wolves, and whales would provide the highest level of benefits, while those for moose and seabirds would provide the least benefit to Alaska voters.

The remaining rows in Table A-48 are mean values estimated for several sample breakdowns. In each case, mean values are estimated for each condition (gender = male, gender = female, etc.) and for all nonmissing responses for the particular condition (gender = male or female, etc.). Again, Native Americans are excluded from all the results.

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

Table A-49 shows the results of likelihood ratio tests performed using the estimated distribution functions for the different subsample restrictions. Such a procedure tests for differences between subsets of the sample by testing the hypothesis that the distributions estimated for each restricted subsample are indistinguishable from that estimated for the unrestricted sample. For example, a likelihood ratio test performed on "region of respondent" will estimate separate distribution functions for each region as well as a distribution function for all regions combined. Because maximum likelihood methods were used for the estimation, if the null hypothesis of no difference between regions is true the log likelihoods of the separate regressions will sum to the log likelihood of the combined regression. The test can be used to indicate whether people in each region place the same value on the specified wildlife viewing site. If the null hypothesis that the distribution functions estimated separately for each region are statistically indistinguishable from that estimated for all the regions together cannot be rejected, we conclude that people in each region place the same value on the site--i.e., we assert that the means of statistically indistinguishable distribution functions are also statistically indistinguishable.

The first test shown in Table A-49 is based on region of respondent residence. For the caribou site, -2 log likelihood for the distribution functions estimated for each region separately are 329.328, 1449.826, 404.740, 88.953, and 44.265, respectively. The sum of those log likelihoods is 2317.112. For the distribution function estimated using the combined data, -2 log likelihood is 2331.985. The difference between that and the sum of those from the separate distribution functions, 14.873, is used as a test statistic. The test statistic follows a chi-square distribution with degrees of freedom equal to the difference between the number of parameters estimated for all the separate distributions and the number of parameters estimated in the combined distribution, in this example 8 (10, coming from 5 distributions with 2 parameters each, minus 2). The critical chi-square value at the 5% level and 8 degrees of freedom is 15.507, which is greater than the test statistic of 14.873 so we cannot reject the null hypothesis that the distributions estimated for each region separately are the same as that estimated for all the regions together. The test statistic for the moose site, 58.711, is greater than the critical chi-square value so we reject the null hypothesis that the regional distribution functions are the same for the moose viewing site. The null hypothesis is also rejected for regions with the sheep, whales, bears, and sea birds sites. The differences between regions are significant for those species.

Other results from the likelihood ratio tests shown in Table A-49 (the critical chi-square value for 5% and 2 degrees of freedom is 5.991) are that hunters are significantly different from nonhunters in terms of valuing all but the moose and sheep sites, people with a history of wildlife viewing are significantly different from those with no such history for all the species, and people who took 1 or more primary wildlife viewing trip in 1991 are significantly different from those who did not for all species. This latter test though is very similar to the test based on history of wildlife viewing.

Based on income levels (the critical chi-square value for 5% and 10 degrees of freedom is 18.307), the separate distribution functions are significantly different for the eagle viewing site--so people with different income levels place different values on the eagle viewing site. Significant differences are found for the caribou, moose, whale, bear, seabird, and eagle viewing sites based on gender of respondent. Age of respondent is a significant differentiating factor in terms of value placed on the viewing site for the wolf, whale, bear, and eagle viewing sites. Education of respondent is a significant differentiating factor for all species except Dall sheep and eagles. The distribution functions based on years the respondent has lived in Alaska are significantly different for all species.

Completed by  
2370 Alaska Voters**

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

---

**ALASKA'S WILDLIFE****What does it mean to you?**

---

---

It is very important that this questionnaire be completed by the person to whom it is addressed. Please try to answer what you believe to be true for you; don't ask others for their opinions. The best answers are the ones which most closely reflect your own feelings, beliefs, experiences, and knowledge. If you have any problems filling out the questionnaire please call toll-free 1-800-770-9172 (inside Alaska) or 1-800-777-9172 (outside Alaska) from 8:00 AM to 5:00 PM Alaska time, Monday through Friday, and we will be happy to help you. Thank You!

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

**DEFINITIONS:** Before we begin, we need to explain what we mean by several terms:

**WILDLIFE** includes all wild animals, except fish.

**GAME** includes all wild animals that are hunted.

**WILDLIFE MANAGEMENT** means all the programs and regulations government agencies apply to conserve wildlife and regulate its use by the public.

**WILDLIFE VIEWING** is a term we use to mean all activities involving wildlife, except hunting and trapping. Activities such as watching, photographing, tracking, painting, or listening to wildlife are included in the term wildlife viewing.

## PART ONE: Your Wildlife Attitudes

1. Below are a number of statements people might make about wildlife and wildlife management in Alaska. Please tell us how much you agree or disagree with each statement. There are no right or wrong answers; the best answer is the one that reflects your opinion or what you do. (**CIRCLE ONE NUMBER FOR EACH STATEMENT**)

	Strongly Agree	Moderately Agree	Moderately Disagree	Strongly Disagree	Don't Know/ No Opinion
Wildlife adds a great deal to my enjoyment of living in Alaska.	1	2	3	4	5
I am interested in knowing more about how to find and watch wildlife.	1	2	3	4	5
I like having bears in and around urban areas in Alaska.	1	2	3	4	5
I would probably stop or slow down to look for wildlife if I saw a sign along the highway indicating good wildlife viewing.	1	2	3	4	5
Concern about bears sometimes keeps me from going into the countryside.	1	2	3	4	5

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

	<b>Strongly Agree</b>	<b>Moderately Agree</b>	<b>Moderately Disagree</b>	<b>Strongly Disagree</b>	<b>Don't Know/ No Opinion</b>
I think more concern should be given to protecting the land and water where wildlife live.	1	2	3	4	5
In general, I approve of hunting wildlife for meat.	1	2	3	4	5
In general, I approve of hunting wildlife for trophies.	1	2	3	4	5
In general, I approve of trapping wildlife.	1	2	3	4	5
I think hunters have too much influence on wildlife management.	1	2	3	4	5
I think people living outside Alaska have too much influence on wildlife management in Alaska.	1	2	3	4	5
I think environmentalists have too much influence on wildlife management.	1	2	3	4	5
I think more areas in the state should be managed and developed for wildlife viewing.	1	2	3	4	5
I think more areas in the state should be managed and developed for wildlife viewing, even if that means closing some areas to hunting.	1	2	3	4	5
In general, I believe it is more difficult to see wild animals in areas where those same animals are hunted than in areas where they are not hunted.	1	2	3	4	5
It is better to limit the number of people who can go to a good wildlife viewing site at any one time than to allow the site to become crowded.	1	2	3	4	5

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

	Strongly Agree	Moderately Agree	Moderately Disagree	Strongly Disagree	Don't Know/ No Opinion
I prefer to watch wildlife where there are information signs or naturalists to inform me.	1	2	3	4	5
I prefer to watch wildlife in areas where off-road motorized vehicles are not allowed.	1	2	3	4	5
I believe more areas in the state should be closed to hunting.	1	2	3	4	5
In general, I feel it is safe to be in a hunting area during the hunting season.	1	2	3	4	5
I think most hunters are considerate of other people they meet in the field.	1	2	3	4	5
I like to eat game meat.	1	2	3	4	5
I like to go sport fishing.	1	2	3	4	5
I support killing wolves in some areas of Alaska to increase the numbers of moose and caribou.	1	2	3	4	5
Resolving the differences between state and federal subsistence laws is one of the most important issues in wildlife management in Alaska.	1	2	3	4	5
I think the state should try to get federal subsistence laws repealed.	1	2	3	4	5
I think the legislature should repeal state subsistence laws.	1	2	3	4	5
I support amending the state constitution to make state law agree with federal subsistence law.	1	2	3	4	5

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

2. How interested are you in new sites to view wildlife? Suppose an easily accessible wildlife viewing site were available that offered good views of wildlife in natural surroundings from a close, but safe, distance. Please tell us how often you think you would make a day trip to visit sites like the following over the next five years.

Each question indicates a cost per person to make the round trip. That cost is different in every questionnaire. Please give us your answer even if the amount seems ridiculously high or low so that we can consider a full range of values. (CIRCLE ONE NUMBER FOR EACH STATEMENT)

	Never	At Least Once	More Than Once
How often do you think you would make a <u>day trip</u> to visit a site <u>over the next five years</u> where you could expect to see....			
A <u>herd of caribou</u> if it cost \$ A to make the trip?	0	1	2
<u>Moose</u> if it cost \$ B to make the trip?	0	1	2
A <u>pack of wolves</u> either from the ground or from an airplane if it cost \$ C to make the trip?	0	1	2
<u>Several Dall sheep</u> if it cost \$ D to make the trip?	0	1	2
<u>Typical marine life, and about half the time you would see whales</u> , if it cost \$ E to make the trip?	0	1	2
A <u>large concentration of grizzly bears</u> if it cost \$ F to make the trip?	0	1	2
A <u>large concentration of sea birds</u> if it cost \$ G to make the trip?	0	1	2
A <u>large concentration of eagles</u> if it cost \$ H to make the trip?	0	1	2

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

3. You may have heard or read many different things about wildlife and wildlife management. We can design better information and education programs if we have an idea of what people currently know and don't know about wildlife and wildlife management. Please answer each question below. If you don't know the answer, circle the ?. Please don't guess if you are not sure. Few people, even experts, will know the answers to all the questions. (CIRCLE ONE ANSWER FOR EACH STATEMENT)

	TRUE	FALSE	DON'T KNOW
The number of sea lions in the Gulf of Alaska is increasing.	T	F	?
Both male and female caribou have antlers.	T	F	?
Forest fires in interior Alaska help moose by creating more food for them.	T	F	?
Female bears generally give birth to cubs every year.	T	F	?
Wild wolves have never attacked humans in Alaska.	T	F	?
There are no threatened or endangered species in Alaska.	T	F	?
In Alaska, deer find more food during winter in forests that have never been logged than in those that have been logged.	T	F	?
State hunting regulations are set each year by the Alaska Department of Fish and Game.	T	F	?
The U. S. Fish and Wildlife Service manages wildlife on all federal lands.	T	F	?
The state receives money for wildlife management from federal taxes on the sale of guns and ammunition.	T	F	?
The Federal Subsistence Board sets all hunting regulations on federal lands.	T	F	?
Both sport and subsistence hunting are generally allowed in National Preserves managed by the National Park Service.	T	F	?

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

4. The state gets about a third of its money for wildlife management from federal taxes on certain hunting equipment. How much of that money should be spent on programs for wildlife viewing or other wildlife programs which do not involve hunting? (CIRCLE ONE NUMBER)

- 1           None
- 2           A little (less than 25%)
- 3           Some (26% to 49%)
- 4           Half (50%)
- 5           A lot (51% to 75%)
- 6           Most (more than 75%)
- 7           All
- 8           I have no opinion on this issue

5. The state also gets about a third of its money for wildlife management from the sale of hunting and trapping licenses and tags. How much of that money should be spent on programs for wildlife viewing or other wildlife programs which do not involve hunting? (CIRCLE ONE NUMBER)

- 1           None
- 2           A little (less than 25%)
- 3           Some (26% to 49%)
- 4           Half (50%)
- 5           A lot (51% to 75%)
- 6           Most (more than 75%)
- 7           All
- 8           I have no opinion on this issue

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

6. The amount of money the Alaska Department of Fish and Game receives for wildlife management has declined while costs have increased. There are a number of ways the state could increase funds for wildlife programs. Please tell us how much you favor or oppose each of the following possible ways. (CIRCLE ONE NUMBER FOR EACH STATEMENT)

Would you favor or oppose....	Strongly Favor	Moderately Favor	Moderately Oppose	Strongly Oppose	Don't Know/ No Opinion
Raising the resident hunting license fee from \$12 to \$20?	1	2	3	4	5
Raising the resident hunting license fee to more than \$20?	1	2	3	4	5
Urging Congress to establish a 10% federal tax on bird feed and equipment used in viewing or photographing wildlife such as spotting scopes, cameras, and binoculars with proceeds going back to state governments for wildlife viewing programs?	1	2	3	4	5
Requiring that people who use <u>state</u> wildlife refuges or sanctuaries pay access fees?	1	2	3	4	5
Auctioning a special sheep hunting permit to raise money for sheep management?	1	2	3	4	5

7. Some people think baiting or attracting black bears with food allows hunters to be more selective in choosing which bear to kill. Do you support allowing hunters to use bait to hunt black bears? (CIRCLE ONE NUMBER)

- 1      YES
- 2      NO
- 3      I have no opinion on this issue

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

8. In many states, hunters must pass a certified hunter education course before they can hunt. These 10 to 20 hour courses are generally offered free of charge by state wildlife agencies. Which one of the following statements best describes your opinion of requiring hunters to pass a hunter education course to hunt in Alaska? (CIRCLE ONE NUMBER)

- 1            Hunters should not be required to pass a hunter education course to hunt in Alaska.
- 2            Only hunters hunting for the first time in Alaska should be required to pass a hunter education course.
- 3            All hunters should be required to pass a hunter education course to hunt in Alaska.
- 4            I have no opinion on this issue.

9. Have you ever purchased a hunting license in Alaska or some other place?  
(CIRCLE YOUR ANSWER)

YES

NO

10. Have you ever gone on an outing which included wildlife viewing as one of the things you planned to do? Remember that the term WILDLIFE does not include fish, and that the term WILDLIFE VIEWING includes watching and photographing wildlife but does not include hunting or trapping. (CIRCLE ONE ANSWER)

NO            Please skip PART TWO of the survey and go to PART THREE on the second to last page of the questionnaire

YES           Please continue on to PART TWO

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**
**PART TWO: Your Wildlife Viewing Activities**

This part of the survey will ask you about your wildlife viewing activities. The information you provide will help us understand what characteristics of wildlife viewing trips are important and how wildlife viewing trips affect the state's economy.

1. Below are some things you may consider when you go on a trip to view wildlife. Some are things you might see, others are facilities or signs of development. Please indicate which of the following features make a site more attractive or desirable for wildlife viewing, which ones you find unattractive, and which ones you are neutral towards or are not a factor for you. (CIRCLE ONE RESPONSE FOR EACH)

	Strongly Attractive	Moderately Attractive	Moderately Unattractive	Strongly Unattractive	Neutral/Not a Factor
Good chance of seeing many different kinds of wildlife	1	2	3	4	5
Good chance of seeing lots of wildlife, even if they are the same kind	1	2	3	4	5
Opportunity to see particularly large individual animals	1	2	3	4	5
Opportunity to see unique or unusual wildlife	1	2	3	4	5
Seeing the wildlife at close range, assuming it is safe	1	2	3	4	5
Viewing site located in a remote wilderness area	1	2	3	4	5
Seeing many other people at the site	1	2	3	4	5
Having road access all the way to the site	1	2	3	4	5
Many off-road vehicles in the area	1	2	3	4	5

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

	Strongly Attractive	Moderately Attractive	Moderately Unattractive	Strongly Unattractive	Neutral/Not a Factor
Many power boats in the area	1	2	3	4	5
Air boats in the area	1	2	3	4	5
Public restrooms	1	2	3	4	5
Public use cabins	1	2	3	4	5
Public boat moorings/launch	1	2	3	4	5
Public air strip	1	2	3	4	5
Hiking trails	1	2	3	4	5
Information center or naturalist in the area	1	2	3	4	5
Public campground	1	2	3	4	5
Active mine	1	2	3	4	5
Old clearcut	1	2	3	4	5
Recent clearcut	1	2	3	4	5
Commercial fishing activity	1	2	3	4	5
Other signs of development (please specify)	1	2	3	4	5
_____	1	2	3	4	5

2. Did you take any day trips in Alaska (other than hunting or trapping trips) in 1991 on which wildlife viewing was one of the main activities you planned? By day trip we mean a trip on which you left and returned home in the same day. (CIRCLE YOUR ANSWER)

NO

YES

As best you can recall, how many wildlife viewing day trips did you take in 1991?

\_\_\_\_\_ day trips

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**
**3. Look over the list of items in the table below.**

- \* First, please tell us which ones your household owns by circling NO or YES. Then, tell us how many your household owns.
- \* For any of the items you own, please tell us whether wildlife viewing was one of the main reasons you purchased that item by circling NO or YES.
- \* If you purchased the item in 1991, please tell us the nearest Alaska town or city where you purchased it. If you bought it outside Alaska or from a catalog, just write "OUTSIDE".
- \* Then tell us how much it cost you or another member of your household. Give us your best estimate if you don't remember where you bought something or how much you paid.

Item	Do You Own? (Circle One)		How Many? _____	Was Wildlife Viewing a Main Reason For Purchase? (Circle One)		If Purchased in 1991	
	NO	YES		NO	YES	Where _____	Cost (Best Estimate) \$ _____
Airplane	NO	YES	_____	NO	YES	_____	\$ _____
Off-road vehicle	NO	YES	_____	NO	YES	_____	\$ _____
Boats (all types and boat trailers)	NO	YES	_____	NO	YES	_____	\$ _____
Outboard motor	NO	YES	_____	NO	YES	_____	\$ _____
Snow machine	NO	YES	_____	NO	YES	_____	\$ _____
Camper, Motorhome	NO	YES	_____	NO	YES	_____	\$ _____
Cabin, Shack	NO	YES	_____	NO	YES	_____	\$ _____
Land	NO	YES	_____	NO	YES	_____	\$ _____
Horses or Dogs	NO	YES	_____	NO	YES	_____	\$ _____

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

4. Please tell us about any other equipment or special clothing that you purchased in 1991 for which wildlife viewing was one of the main reasons you purchased the good.

- \* What did you buy? We listed some common things people buy, but there may be others that you bought. Please tell us what you bought within each category and list any other things that you may have bought.
- \* Where did you buy it? Name the nearest Alaska town or city. Write "OUTSIDE" if you bought it outside Alaska or from a catalog.
- \* How much did it cost?

Category	Item	Where Purchased Alaska Town(s) or OUTSIDE	Cost to You (Best Estimate)
Cameras, lenses, or other photographic equipment	_____	_____	\$ _____
	_____	_____	\$ _____
	_____	_____	\$ _____
Binoculars, scopes, etc.	_____	_____	\$ _____
	_____	_____	\$ _____
	_____	_____	\$ _____
Camping Equipment	_____	_____	\$ _____
	_____	_____	\$ _____
	_____	_____	\$ _____
Special Clothing	_____	_____	\$ _____
	_____	_____	\$ _____
	_____	_____	\$ _____
Skis or Snowshoes	_____	_____	\$ _____
Bird Feeders or Seed	_____	_____	\$ _____
Others (please specify)	_____	_____	\$ _____
_____	_____	_____	\$ _____

## ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics

5. Did you take any overnight trips in Alaska (other than hunting or trapping trips) during 1991 on which wildlife viewing was one of the activities you planned? By overnight trip we mean a trip on which you spent one or more nights away from home. (CIRCLE YOUR ANSWER)

NO

Please go to PART THREE on the second to last page of the questionnaire

YES

Please go on to the next question

6. People may plan several different activities when they decide to make an overnight trip. Wildlife viewing may be just one of many reasons for a particular trip, or it may be the single most important reason. We will use the terms PRIMARY and SECONDARY to separate trips which were made primarily for wildlife viewing from those where the importance of wildlife viewing was secondary to other activities.

The best way to determine if a trip is a PRIMARY WILDLIFE VIEWING trip is to ask yourself the question "would I have made this trip to this place if I had not been planning to view wildlife?" If your answer is NO, then that is a PRIMARY WILDLIFE VIEWING trip. If your answer is YES, then that is a SECONDARY WILDLIFE VIEWING trip.

## EXAMPLES:

- \* A trip to Denali National Park to specifically find wildlife to watch or photograph is a PRIMARY WILDLIFE VIEWING trip; whereas
- \* A trip to Denali National Park to specifically photograph Mount McKinley, but where you watch or photograph any wildlife you happen to see is a SECONDARY WILDLIFE VIEWING trip.
- \* A fishing, hiking, boating, sightseeing, or horseback trip to an area you selected because the area offered wildlife viewing is a PRIMARY WILDLIFE VIEWING trip. That is, you would have gone to a different area had that area not offered the opportunity to view wildlife; whereas
- \* A fishing, hiking, or horseback trip to an area you chose for some reason other than wildlife viewing, but where you also planned to watch wildlife is a SECONDARY WILDLIFE VIEWING trip. That is, wildlife viewing was one of your planned activities, but not the one that determined where you went.

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

Please look over TABLE 1 on this page and the next page.

- \* Please list up to 8 of your 1991 overnight wildlife viewing trips in Alaska by filling in the blanks in TABLE 1. First, list all your PRIMARY overnight wildlife viewing trips. Then list all your SECONDARY overnight wildlife viewing trips.
- \* It is very important that all your PRIMARY overnight wildlife viewing trips are listed before any of your SECONDARY overnight wildlife viewing trips.
- \* In the second column, please tell us whether each trip was PRIMARY or SECONDARY by circling P or S.
- \* Then, please fill in where you went, the kinds of wildlife you went to see, the month or months of your trip, and the number of nights you were away from home.

**TABLE 1: 1991 OVERNIGHT WILDLIFE VIEWING TRIPS IN ALASKA**

TRIP	TYPE OF TRIP P=primary S=secondary (circle one)	WHERE YOU WENT (specific park, road segment, refuge, river, island, bay, lake, or nearest town)	THE WILDLIFE YOU WENT TO SEE	WHEN YOU WENT (month(s))	THE NUMBER OF NIGHTS YOU WERE AWAY FROM HOME
TRIP A	P or S	_____	_____	_____	_____
		_____	_____	_____	_____
		_____	_____	_____	_____
TRIP B	P or S	_____	_____	_____	_____
		_____	_____	_____	_____
		_____	_____	_____	_____

## ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics

TRIP	TYPE OF TRIP P = primary S = secondary (circle one)	WHERE YOU WENT (specific park, road segment, refuge, river, island, bay, lake, or nearest town)	THE WILDLIFE YOU WENT TO SEE	WHEN YOU WENT (month(s))	THE NUMBER OF NIGHTS YOU WERE AWAY FROM HOME
TRIP C	P or S				
TRIP D	P or S				
TRIP E	P or S				
TRIP F	P or S				
TRIP G	P or S				
TRIP H	P or S				

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics****IMPORTANT INSTRUCTIONS****PLEASE READ CAREFULLY**

To estimate the economic importance of wildlife viewing, we would like to know how much each person spends on all their wildlife viewing trips. However, this is not practical because some people make many trips. Instead, a trip will be scientifically selected from the trips you just listed in TABLE 1, and we will ask you a number of questions about that one trip. This will allow us to use statistical techniques to estimate the economic impact of wildlife viewing.

- \* The trip will be called your **SELECTED TRIP**.
- \* Follow the procedures in the next questions to identify your **SELECTED TRIP**.

**PLEASE NOTE:** If you have trouble figuring out your **SELECTED TRIP**, please call the toll-free phone number on the front cover and we'll gladly help you.

7. Did you list any PRIMARY overnight wildlife viewing trips in TABLE 1? (**CIRCLE ONE ANSWER**)

**YES** ..... Write the number of PRIMARY trips you listed in TABLE 1 in this box.

NUMBER OF TRIPS

\_\_\_\_\_

**NO** ..... Write the number of SECONDARY trips you listed in TABLE 1 in this box.

NUMBER OF TRIPS

\_\_\_\_\_

8. Please look over TABLE 2 on the next page. The table is different in every questionnaire, and it will tell you which of the trips you listed in TABLE 1 will be your **SELECTED TRIP**.

Look in the first column of TABLE 2 for the number of trips you just wrote in the box in Question 7. Circle both that number and the trip letter beside it in the second column. That will be your **SELECTED TRIP**.

## ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics

TABLE 2

If the number you wrote in the box in Question 7 is . . . .		Then your SELECTED TRIP is . . . .
1	—————>	Trip A
2	—————>	Trip B
3	—————>	Trip C
4	—————>	Trip D
5	—————>	Trip E
6	—————>	Trip F
7	—————>	Trip G
8	—————>	Trip H

Return to TABLE 1: 1991 OVERNIGHT WILDLIFE VIEWING TRIPS IN ALASKA and find the TRIP in column one corresponding to the trip letter you just circled in TABLE 2. Circle that TRIP. This is your SELECTED TRIP. It is important to use that specific trip in answering the rest of the questions in PART TWO of the survey, even if your SELECTED TRIP happens to be your worst or cheapest trip.

WRITE THE LETTER OF YOUR SELECTED TRIP HERE \_\_\_\_\_

Example 1: If you had listed 3 primary wildlife viewing trips and 4 secondary wildlife viewing trips in TABLE 1, then you would have written the number 3 in the box for Question 7, circled 3 and Trip C in TABLE 2, and your SELECTED TRIP would have been Trip C .

Example 2: If you had listed no primary wildlife viewing trips and 5 secondary wildlife viewing trips in TABLE 1, then you would have written the number 5 in the box for Question 7, circled 5 and Trip E in TABLE 2, and your SELECTED TRIP would have been Trip E .

## ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics

## IMPORTANT INSTRUCTIONS

## PLEASE READ CAREFULLY

To allow us to estimate the economic importance of wildlife viewing, please answer the following questions and list the expenses for your SELECTED TRIP as best you can remember.

- \* Please tell us what you purchased on your SELECTED TRIP.
- \* Then tell us the nearest Alaska town or community where you purchased the item. If you bought it outside Alaska or from a catalog, just write "OUTSIDE".
- \* Tell us the total amount you paid for the item (not just the price for each unit). Report all money that came out of your pocket, even if you paid someone else's expenses. Do not include expenses someone else paid for you.
- \* Include expenses that occurred before your SELECTED TRIP that were made in preparation for your trip (like film or other supplies) and expenses that occurred after your trip, but were directly related to your SELECTED TRIP (like film processing).
- \* Give us your best estimate if you don't remember exactly how much you paid for something or where you bought it.

9. **Round Trip Transportation Expenses** For each of the following that apply, please fill in the Alaska town where purchased (or OUTSIDE, if purchased outside Alaska) and the cost. (Do not include expenses that were included in the cost of a commercial or charter trip. We will ask you about those expenses in Question 15.)

	Where Purchased Alaska Town(s) or OUTSIDE	Cost to You (Best Estimate)
Commercial airline	_____	\$ _____
Airplane charter/Air taxi	_____	\$ _____
Rental of Car, Truck, Motorhome, etc.	_____	\$ _____
Ferry	_____	\$ _____
Boat charter	_____	\$ _____
Train or Bus	_____	\$ _____

_____	_____	\$ _____
_____	_____	\$ _____
_____	_____	\$ _____

**16. Wildlife Viewing and Photographic Supplies** (like film, film processing, lens cleaning supplies, video tape, etc.)

Items	Where Purchased Alaska Town(s) or OUTSIDE	Cost to You (Best Estimate)
_____	_____	\$ _____
_____	_____	\$ _____
_____	_____	\$ _____
_____	_____	\$ _____

**17. Equipment Rental** (like video camera, horses, canoes, kayaks, etc., other than equipment included in a trip or tour package)

Items	Where Rented Alaska Town(s) or OUTSIDE	Cost to You (Best Estimate)
_____	_____	\$ _____
_____	_____	\$ _____

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics****18. Shipping (equipment to and from the field, etc.)**

Items	Where Purchased Alaska Town(s) or OUTSIDE	Cost to You (Best Estimate)
_____	_____	\$ _____
_____	_____	\$ _____

**19. Other Items or Unanticipated Expenses (anything not covered in the categories above, including souvenirs, medical expenses for injuries, etc.)**

Items	Where Purchased Alaska Town(s) or OUTSIDE	Cost to You (Best Estimate)
_____	_____	\$ _____
_____	_____	\$ _____
_____	_____	\$ _____

The next set of questions will ask you about what you did on your **SELECTED TRIP**. Your answers will help us better understand what characteristics of wildlife viewing trips are important.

**20. What kinds of wildlife did you actually see on your SELECTED TRIP? (LIST ALL YOU REMEMBER)**

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

## ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics

21. On how many different days during your SELECTED TRIP did you spend all or part of the day actually looking for or viewing wildlife?

\_\_\_\_\_ days actually looking for or viewing wildlife

On those days, how many hours per day on average did you actually look for or view wildlife? Please give us your best estimate.

\_\_\_\_\_ hours per day actually looking for or viewing wildlife

22. How did you get to your viewing area on your SELECTED TRIP? (CIRCLE ALL THAT APPLY and fill in the time where appropriate.)

- 1 Car or truck; please estimate the total time you drove: \_\_\_\_\_
- 2 Private boat; please estimate the total time you boated: \_\_\_\_\_
- 3 Private airplane; please estimate the total time you flew: \_\_\_\_\_
- 4 Commercial airline
- 5 Chartered airplane/Air taxi
- 6 Train or Bus
- 7 Ferry
- 8 Chartered boat
- 9 Other (please specify) \_\_\_\_\_

23. How many people, including yourself, were in your viewing party? (Your own party, not the whole group if you were part of a commercial tour group.)

\_\_\_\_\_ people including myself were in the party

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

- 24.** Earlier we asked you which of the following things made a site more attractive for a wildlife viewing trip and which ones you found unattractive. Now please tell us which ones you actually saw on your SELECTED TRIP or which ones were true for your SELECTED TRIP. (CIRCLE YES OR NO FOR EACH ITEM)

Saw many different kinds of wildlife	YES	NO
Saw a lot of wildlife, even if they were the same kind	YES	NO
Saw particularly large individual animals	YES	NO
Saw unique or unusual wildlife	YES	NO
Got close to the wildlife	YES	NO
Wildlife viewing site was located in a remote wilderness area	YES	NO
Saw many other people at the site	YES	NO
Had road access all the way to the site	YES	NO
Saw or heard many off-road vehicles	YES	NO
Saw or heard many power boats	YES	NO
Public use cabins	YES	NO
Public boat moorings/launch	YES	NO
Public air strip	YES	NO
Hiking trails	YES	NO
Information center or naturalist in the area	YES	NO
Public campground	YES	NO
Active mine	YES	NO
Old clearcut	YES	NO
Recent clearcut	YES	NO
Commercial fishing activity	YES	NO

## ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics

The next set of questions will ask you how satisfied you were with your SELECTED TRIP and the money you paid for it.

25. All things considered--the expenses, the wildlife, whether you saw the particular kinds of wildlife you were looking for, the overall quality of the trip--do you feel that your SELECTED TRIP was worth the money you paid? If you had it to do all over again, would you take that exact same wildlife viewing trip for the same cost? (CIRCLE YOUR ANSWER)

NO Please go to the next page, PART THREE

YES Please go on to Question 26

26. The expenses for your SELECTED TRIP could have been higher or lower. For example, transportation and other expenses rise and fall over time. Suppose your costs had been higher. How much could the cost of your SELECTED TRIP have increased before you would have decided it was just not worth it and you would not have taken your SELECTED TRIP?

In other words: Up to how much more, in addition to what you actually paid for your SELECTED TRIP, would you have paid to take your SELECTED TRIP?

I would have paid as much as \$ \_\_\_\_\_ more than I actually paid to take my SELECTED TRIP

27. If you answered \$0 to the previous question, please tell us what that means. (CIRCLE ONE NUMBER)

1 I would not have paid any more to take my SELECTED TRIP. That trip was worth exactly what I paid and no more.

2 I answered \$0 because I could not put a number on how much more I would have paid for my SELECTED TRIP.

3 I answered \$0 for other reasons. Please specify \_\_\_\_\_

## ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics

**PART THREE: Background**

In this part, we would like to learn more about you and your background. Your answers will be confidential. This information will only be used to report comparisons among groups.

1. Where do you live now? *(FILL IN THE BLANKS)*

Nearest city or village \_\_\_\_\_ State \_\_\_\_\_

2. How long have you lived in Alaska? \_\_\_\_\_ Years

3. Are you? *(CIRCLE YOUR ANSWER)*

Male

Female

4. How old are you? \_\_\_\_\_ years old

5. How many people of your immediate family live with you in your house *(do not include yourself)*, and what are their ages? *(FILL IN THE BLANKS)*

\_\_\_\_\_ people live with me in my house,

and their ages are \_\_\_\_\_

6. How many years of school have you completed? *(CIRCLE ONE NUMBER)*

1 Eighth grade or less

4 Some College

2 Some high school

5 College graduate

3 High school graduate

6 Graduate school

**ALASKA VOTERS: Their Wildlife Related Trip Characteristics and Economics**

7. What do you consider yourself to be? (*CIRCLE ONE NUMBER*)

- 1 Asian
- 2 Black
- 3 Hispanic
- 4 Native American
- 5 White
- 6 Other (please specify) \_\_\_\_\_

8. What do you currently do for a living? If retired or unemployed, what was your primary occupation? (*FILL IN THE BLANK*)

\_\_\_\_\_

9. What was the total 1991 annual income, before taxes, of all members of your immediate family living in your household? (*CIRCLE ONE NUMBER*)

- |   |                     |    |                       |
|---|---------------------|----|-----------------------|
| 1 | Less than \$5,000   | 10 | \$45,000 - \$49,999   |
| 2 | \$5,000 - \$9,999   | 11 | \$50,000 - \$59,999   |
| 3 | \$10,000 - \$14,999 | 12 | \$60,000 - \$69,999   |
| 4 | \$15,000 - \$19,999 | 13 | \$70,000 - \$79,999   |
| 5 | \$20,000 - \$24,999 | 14 | \$80,000 - \$89,999   |
