

DISTRIBUTION, ABUNDANCE, AND PRODUCTIVITY OF OSPREYS IN INTERIOR ALASKA.

Jeffrey H. Hughes. Nongame Wildlife Program, Alaska Department of Fish and Game, 333 Raspberry Road, Anchorage, Alaska 99502.

Results from the first two years of an ongoing survey project to determine the distribution, abundance, and productivity of ospreys (*Pandion haliaetus*) nesting in interior Alaska are summarized. Nineteen young ospreys were banded and two infertile eggs were collected for pesticide analysis. One banded osprey was found in northeastern California. Forty-one osprey nests were located, mapped, and monitored for breeding activity. Most were located in the Tetlin Lakes region. The results presented are preliminary and should be interpreted with caution until more information becomes available.
