PROJECT TITLE: Analysis of Queen Charlotte goshawk radiotelemetry and prey-habitat data in conjunction with the USDA Forest Service

Project Objectives:

The following components will be analyzed and developed into reports or manuscripts as an objective of this study:

- a) Coordinate, fund, and work with the Forest Service who will perform the spatial habitat analyses of the 1991-1999 radiotelemetry data.
- b) Perform home range analyses by sex, age, and location on the Tongass given varying prey occurrence.
- c) Perform resource selection modeling and habitat analyses based on GIS outputs as provided by the Forest Service.
- d) Perform exploratory analysis of passerine bird dataset that was previously collected by the Forest Service.

Summary of Project Accomplishments

Accomplishment of the objectives has been delayed because U.S. Forest Service staff members have not completed the spatial habitat analyses in objective a) upon which all other objectives depend. We expect the Forest Service will provide this data with a few weeks and we will be able to proceed with the rest of the project.

Project Costs: Federal share \$35,357 + state share \$11,038 = total cost \$46,395
