INTRODUCTION/HOW TO USE THIS BOOK

INTRODUCTION

As a part of the Division of Wildlife Conservation's continuing commitment to provide reliable data for those concerned with Alaska wildlife issues, the Wildlife Information Data Base Project presents the 1992-93 Wildlife Harvest Summary Book. The information in this book is accurate as of January 1, 1994.

This edition is the fifth in an ongoing series of yearly publications, and incorporates 5 years of data (regulatory years 1988-89 through 1992-93) in its multi-year tables. This year's book contains the final format for this publication: future books will also contain five years of historical information (the 1993-94 book will cover regulatory years 1989-90 through 1993-94).

As you look at the data and compare information from year to year, you should keep in mind the following aspects of the 1992-93 regulatory year which affected reported harvest levels and produced differences between this and previous years:

Interviews with deer hunters in some villages in Southeast Alaska indicate under-reporting of harvests continues to be a problem in many remote areas. Under-reporting of actual harvests jeopardizes future harvest allocations.

The Alaska Peninsula (GMU 9) was closed for Fall and Spring brown bear hunting in 1992-93 (the season was open in '91-92).

An early snowstorm in September of 1992 was severe for wildlife and hunters over much of Interior and SouthCentral Alaska. As a result of the poor hunting conditions, harvests of moose, caribou, brown bear, black bear and sheep were lower than normal. Severe conditions also affected breeding that fall and will likely affect future harvests of some species.

Moose harvests on the Seward Peninsula were down in 1992-93 primarily because of a population decline resulting from several previous severe winters. Biologists estimate the herds on the Seward Peninsula were down by 25% in the Fall of 1992.

We hope you find the information in this book useful.

ACKNOWLEDGEMENTS

Thanks is extended to the Information Management Section staff for their diligence and dedication in producing this book. Special thanks goes to Becky Strauch for her exceptional computer capabilities and dedication to excellence, to Suzan Bowen without whose ideas, attention to detail, and good humor this book would have been impossible; to Thela Divens, Bob Walker, Tammy Wettin, and Ruth Moulton for their efforts, and high standards of accuracy. Thanks goes to other Divisional staff making significant contributions to this book: to each area and assistant area management biologist for his/her outstanding cooperation and willing effort; to the Management Coordinators; to the Regional Supervisors; to Deputy Director Wayne Regelin for his encouragement and support; and especially to SuzAnne Miller for her dedication of staff time and budgetary resources for the annual completion of this program.

1992-1993 ALASKA WILDLIFE HARVEST SUMMARY

A KEY TO USING THE TABLES

FOR EASIER INTERPRETATION OF TABLE CONTENTS, PLEASE NOTE THE FOLLOWING:

1. **"n/a"** means **NO DATA WAS AVAILABLE.**

2. A **"Z"** designation following a Game Management Unit (GMU) number refers to data for which the **SUBUNIT WAS UNKNOWN**; during central processing, data could only be assigned at the GMU level due to omissions or illegibility of information.

3. **"Unit 27Z"** refers to data for which the **GAME MANAGEMENT UNIT** was unknown.

4. Hunt numbers followed by an **"F"** refer to **FALL HUNTS**; numbers followed by an **"S"** refer to **SPRING HUNTS**. Not all Fall or Spring hunts have an F or S designation. For a more complete listing of Fall or Spring hunt numbers, refer to the 1992-93 Permit Hunt Supplement newspapers.

5. Hunt numbers preceded by a **"T"** refer to **TIER II SUBSISTENCE HUNTS**.
   Hunt numbers preceded by a **"D"** refer to **DRAWING PERMIT HUNTS**.
   Hunt numbers preceded by an **"R"** refer to **REGISTRATION PERMIT HUNTS**.
   All **FEDERAL HUNTS** are **REGISTRATION HUNTS**.

6. **"General Season"** refers to a season not regulated by the drawing or registration permit systems and is open to one or more of the following categories of hunters: Alaska Resident, Non-Resident, or Subsistence. In general season hunts, the numbers of hunters are not regulated; the numbers of animals taken are regulated by bag limits, season lengths, methods and means, and access restrictions.

7. Throughout this book, **"SHEEP"** refers to **DALL SHEEP**; **"DEER"** refers to **SITKA BLACKTAIL DEER**; and **"OTTER"** refers to **RIVER OTTER** (also known as **LAND OTTER**).

8. If a species is not listed for a particular GMU/subunit, it does not occur in that area.

Be aware of the scope and limitations of the information presented here before interpreting it for other applications. In using these wildlife harvest statistics, you should check available information (the Comments column in the main tables and the Seasons section) to note actual season lengths, applicable regulations, or other conditions which may have affected harvest levels. Other factors affecting harvest (such as weather conditions, availability of other food sources, alternative hunting opportunities, or travel costs) are not quantified here.

HOW THIS BOOK IS ORGANIZED

WHAT IS IN THE DATA TABLES

The harvest data presented in this book have been compiled from two main sources:

1. **CENTRALLY PROCESSED DATA** obtained from keypunched harvest reports (e.g., moose harvest tickets, bear and furbearer sealing certificates, etc.), from keypunched permit reports (includes most drawing permit data and some registration hunt data), and from a deer hunter survey for South East and South Central Alaska.

2. **BIOLOGIST-COMPILED RECORDS** (e.g., some drawing permit hunt data; data from most registration hunts; general seasons where harvest reports are not required; Defense of Life and Property [DLP] kills ; and illegal and unreported kills).

Refer to the **SOURCES OF DATA** section of this book for a more detailed explanation of the systems used for collecting the harvest data presented here.

The State of Alaska's summary harvest data for regulatory year 1992-1993 (July 1, 1992-June 30, 1993) is presented in two ways, each in its own section:

1. By **GAME MANAGEMENT UNIT/SUBUNIT**

2. By **SPECIES**

Within each section of these two sections, the data are presented in two parts:

1. **HARVEST INFORMATION**

2. **HUNTER INFORMATION**

The two parts are presented separately to avoid confusion when the tables are read. In other words, in the GMU/Subunit section, all harvest information for all units is presented, followed by tables for all hunter information for all units. In the Species section, harvest for all species is presented, followed by all hunter information.

All data are identified as to species, GMU/Subunit, type of hunting season (i.e., general season, drawing permit, registration permit, trapping, etc.) and hunt number, where applicable. Information on permit or harvest ticket holders who did not hunt is not reported in this book.

HARVEST INFORMATION contains the following:

1. **Total Harvest**: Total number of animals harvested. Reported harvest only. Does NOT include DLP's for bears or unreported/illegal harvest.

2. **Sex** breakdown of reported harvest: (male + female + unknown = Total Harvest).

3. **DLP**: Defense of Life and Property kills. Applies to mainly to brown and black bears, but occasionally to nuisance beaver kills or similar ADF&G-sanctioned kills.

4. **Unreported/Illegal**: Estimates of unreported and/or illegally taken harvest. In some areas, for some species, unreported and illegal harvest may equal or exceed the reported harvest.

5. **Average Horn Length/Antler Width**: Horn length applies to Dall Sheep and Mountain Goat.
   Antler width applies to moose.
   Caribou and Deer rack size data are not collected.

6. **Comments**: Explanatory information pertinent to interpretation of the data.

HUNTER INFORMATION contains the following:

1. **Successful Hunters**

   a. **Total**: Total number of successful hunters. Total Successful = Successful Unit Residents + Other Successful State Residents + Total Successful Non-Residents + Total Successful Unknown Residents.

      For hunts and species which have a single animal bag limit, Total Successful = Total Harvest.

   b. **Unit Residents**: Number of successful hunters whose primary place of residence is the GMU in which the hunt or season is held.

   c. **Other State Residents:** Total number of successful hunters who are Alaska State residents but who are not residents of the GMU for which data is reported.

   d. **Non-Residents**: Total number of successful hunters who are non-residents. Non-residents includes aliens who reside outside of the U.S.

   e. **Unknown Residents**: Total number of successful hunters whose residency is unknown, generally because of illegibly written address information or failure to include it on the harvest or permit report.

2. **Unsuccessful Hunters**
   The residency categories for Unsuccessful hunters are the same as for Successful categories, except that Unsuccessful data apply. Total = Unsuccessful Unit Residents + Unsuccessful Other State Residents + Unsuccessful Non-Residents + Unsuccessful Unknown Residency hunters.

   For many hunts, Unsuccessful residency information is not available and is denoted by "n/a" in the appropriate columns. No Unsuccessful residency is collected for brown and black bear harvests (except for permitted hunts), caribou General Season hunts, and all furbearers.

3. **Percent Successful**:
   For those hunts where both Successful and Unsuccessful hunter residency data is available, % Success is calculated.

   a. **Total % Success** = (Total number of successful hunters / [Total number of successful hunters + Total number of unsuccessful hunters]) x 100.

   b. **Unit Resident % Success** = (Total number of successful GMU resident hunters/[Total number of successful GMU resident hunters + Total number of unsuccessful GMU resident hunters]) x 100.

c. **Other State Resident % Success** = (Total number of successful other Alaska resident hunters/[Total number of successful other Alaska resident hunters + Total number of unsuccessful other Alaska resident hunters]) x 100.

d. **Non-Resident % Success** = (Total number of successful non-resident hunters/[Total number of successful non-resident hunters + Total number of unsuccessful non-resident hunters]) x 100.

e. **Unknown Resident % Success** = (Total number of successful unknown residency hunters/[Total number of successful unknown residency hunters + Total number of unsuccessful unknown residency hunters]) x 100.

4. **Total Days** = Total number of days or parts of days spent in the field by all hunters having the intent to harvest a given species.

5. **Average Effort** = Total number of days spent by all hunters in the field / Total number of hunters, where Total number of hunters = Total Successful + Total Unsuccessfuls.

CALCULATION OF TOTALS

AT THE SUBUNIT LEVEL:

HUNTER AND HARVEST INFORMATION:

1. **TOTAL HUNT**: When more than one hunt with the same hunt number appears within a subunit (e.g., Fall and Spring hunts with the same number; or a drawing permit hunt and a registration hunt open to anyone), the data for those hunts are totalled.

2. **TOTAL SUBUNIT**: When more than one hunt for a given species occurs within a subunit, the data for all hunts for that species are totalled. Single hunts within a subunit for a given species are their own totals.

AT THE GAME MANAGEMENT UNIT LEVEL:

HARVEST INFORMATION:

1. **TOTAL UNIT**: All reported harvest for a given species, regardless of hunt number or hunt type, is totalled at the Unit level and is presented at the end of the Subunit tables.

   a. **When a GMU has no Subunits**, data from individual hunts are shown as in Subunit tables, then totalled in a GMU summary table, consistent with the format for GMU's with Subunits.

   b. **For sealed furbearers** (beaver; marten taken from GMU's 1-5 and 7, 13(E), 14, 15, and 16; lynx; otter; wolf; and wolverine), data are totalled at the GMU level. Acquisition and export data for unsealed furbearers are shown in a special table in the ***Historical Tables*** section

HUNTER INFORMATION:

Even though problems exist because of duplicate reporting when a single individual hunts in more than one subunit (one individual would be counted as more than one), **hunter data is totalled at the Unit level as well as at the subunit level. These data are intended for use as indices only and may overestimate the true number of hunters utilizing the resource.**

AT THE STATEWIDE LEVEL

TOTAL STATEWIDE

1. The sum total of all harvest data Statewide is shown in a separate table at the end of the **GMU/SUBUNIT** section.

2. Statewide totals by species are shown at the end of the GMU summaries in the **SPECIES** section.

3. No statewide totals for unsealed furbearers are given because of incomplete data. Acquisition and export data for unsealed furbearers are shown in a special table in the **HISTORICAL TABLES** section. Refer to **SOURCES** section for an explanation of acquisition and export information.

COMPARATIVE TABLES

The **HISTORICAL TABLES** section of this book contains tables which compare harvest and/or hunter information on a multi-year basis. These tables present statewide, regional or GMU totals from the previous Harvest Summary Books (1988-89 through 1991-92) along with the 1992-93 information in a comparative format.

MULTI-YEAR COMPARISONS OF HARVEST DATA

When comparing harvest levels by hunt number from one year to the next, remember that hunt numbers, hunt areas, bag limits, and/or methods and means frequently change from one year to the next. Depending upon the changes, comparisons between years should only be made with caution; and in some cases, direct comparisons should not be made at all.

This book contains no multi-year comparisons of harvest data at the hunt number level. Exercise extreme caution before you attempt to make such comparisons. Refer to the Seasons section of this book, to past and current issues of *Alaska Game Regulations*, the annual drawing and registration permit hunt supplemental newspapers, and Division of Wildlife Conservation staff who have knowledge of hunt histories (specific area biologists, Regional Regulation Specialists, Regional Management Coordinators, etc.). ADF&G's Wildlife Conservation Information Management Section has compiled a multi-year database containing an exhaustive listing of all hunts and their histories held in Alaska since 1988. Specific information regarding hunt number changes, etc. may be obtained by contacting Bob Walker, ADF&G, (907)267-2404. Charges for information may apply.

SOURCES OF DATA

SOURCES OF HARVEST INFORMATION

The Division of Wildlife Conservation compiles Alaska wildlife harvest information from a diverse array of sources. This section outlines the various data sources for the species whose harvests are summarized in this book. Specific sources of harvest information for each separate species are explained in the second part of this section.

HARVEST TICKETS

Harvest tickets are the primary means of collecting information on caribou, moose, and sheep harvests in areas not administered by registration or drawing permit hunts. License vendors and Department staff issue harvest tickets to individual hunters. Each "harvest ticket" has three parts: an overlay, containing hunter's name, residency information and license number; a hunt report containing harvest data; and a harvest ticket carried into the field by the hunter and validated when an animal is harvested., License vendors return overlays to the Division of Wildlife Conservation in Anchorage. Alalska law requires hunters to send in a completed hunt report within a specified time frame after the hunt. Reports are postage-paid and pre-addressed to be sent to Anchorage for central processing by the Information Management Section.

Moose and sheep overlays are keypunched, and hunters not returning reports are sent up to three reminder letters. Deer overlays are keypunched and the information is used for annual survey questionnaires sent to randomly selected individuals hunting in Kodiak, Prince William Sound, and Southeastern Alaska. No hunter reports are required of deer hunters or Western Arctic caribou hunters. Caribou overlays are not presently keypunched.

Hunter reports provide information on hunter residency, effort, success, location of kill, method of take, transport means, commercial services used, sex of animal(s) killed, number of animals killed if multiple bag limits apply, horn or antler measurements where applicable, and chronology of kill.

DRAWING PERMITS AND REGISTRATION PERMITS

A drawing permit is obtained through a lottery drawing in which qualified applicants are chosen on the basis of a computerized random assignment of winning numbers. Harvest levels are regulated through the numbers of permits allotted within each hunt. Drawing winners are issued a permit, part of which is a hunt report which must be filled out and returned to the Division of Wildlife Conservation as part of the conditions of the permit hunt. Failure to return a hunt report for a drawing permit may lead to the exclusion of the hunter from eligibility for drawing permits in the following year.

Registration permits are obtained by application in person at designated area offices. In general, registration permit hunts, unlike drawing permit hunts, have no limiting quota of permits that may be issued. For a few hunts, the total number of permits is limited and permits are issued on a first-come-first-serve basis at designated offices. Harvest levels are regulated through emergency closures of each hunt when desired harvest levels have been reached. In certain registration hunts, only qualified local residents may participate. In some other hunts, only Alaskans holding a resident hunting license may participate; in others, any licensed hunter, regardless of residency, may hunt.

Registration permits contain a hunt report which must be returned either in person or by mail to a designated ADF&G office at a specified time following each hunt. Some drawing and registration hunts may also require hunters to telephone in hunt information.

Permit harvest reports provide hunter residency, effort, location of kill, success, method of take, transport means, and commercial services used in addition to harvest data (sex and horn/antler measurements where applicable).

TIER II PERMITS

In 1991-92 Tier II subsistence hunts were created by the Alaska Board of Game. Tier II subsistence hunts occur when there is not enough wild game in an area for all subsistence hunters to have a reasonable opportunity to take. Hunting permits are given to people who get the highest number of points on a scored application. Points are awarded by the following criteria (defined by law):

1. Customary and direct dependence upon the game population as the mainstay of one's livelihood
2. Local residency
3. Availability of alternative resources

In the 1992-93 regulatory year, 12 Tier II subsistence hunts were held for moose, caribou, mountain goat, and muskox.

FEDERAL PERMITS

During the 1992-93 regulatory year, 35 Federal subsistence hunts were held for caribou, moose, sheep, brown bear, muskox, and mountain goat. Federal regulations were set by a governing board analogous to Alaska's Board of Game. All Federal hunts were registration hunts and all permits issued were valid only for hunt areas on Federal lands. Harvest information was provided by a hunt report similar to the State's, to be returned by each permit holder by a specified deadline.

SEALING DOCUMENTS

Sealing certificates are used in gathering information on black and brown bear harvests, and some furbearer harvests.

Brown bear and black bear sealing certificates are filled out by an authorized Department employee at the time a hunter brings in a bear skull and hide to have a numbered locking tag (seal) affixed. Hunter residency, location of kill, transport means, commercial services used, and successful hunter effort data are obtained from bear sealing certificates, along with sex, age, and color-phase information. No information concerning unsuccessful bear hunters is collected. Sealing of black bears is required only for GMU's 1 - 7, 11 - 16, and 20. For those units where sealing is not required, harvest levels must be estimated and where available, are shown as "unreported harvest".

Of the furbearers harvested in Alaska, five species require sealing: beaver, lynx, otter, wolf, and wolverine. In addition, marten are required to be sealed in GMU's 1-5 (Southeastern Alaska) and GMU's 7,13(E), 14, 15 and 16. Furbearers are sealed by affixing a numbered locking seal to each pelt. Trapper residency data are not routinely collected, nor is effort or success information. Information on number of animals taken, location of harvest, method of take, transport means, pelt size and sex data (where applicable) are obtained from furbearer sealing certificates.

HUNTER QUESTIONNAIRES/SURVEYS

Hunter questionnaires are used to obtain harvest and hunter information for some species in lieu of other sources of reliable harvest information. Deer harvest is generally monitored through the

use of yearly hunter surveys in southeastern Alaska, Kodiak and Prince William Sound. The deer harvest information presented in this year's book was obtained through a deer survey covering all of these areas. Some biologists employ trapper questionnaires to monitor furbearer harvests, and some caribou harvest information is obtained through the use of hunter surveys.

Hunter questionnaires are direct mail surveys sent to a random sample of hunters and trappers based on names obtained from harvest tickets, sealing certificates, or tag sales. Follow-up questionnaires are frequently used to encourage hunters to respond. The total harvest of a population in question is estimated based on a statistical analysis of hunter questionnaire results. Questionnaires can be used as a vehicle for obtaining comprehensive information from hunters. In addition to the same information provided by hunt reports, hunter questionnaires may also provide information on hunter motivations, hunter expenses, use of public facilities, and observations of other wildlife .

HUNTER INTERVIEWS

Many area management biologists augment their more formal sources of harvest data by conducting informal interviews of hunters in the field, at local airports, and in rural towns and villages. Interviews can provide word-of-mouth information on otherwise unreported harvests, information on illegal kills, and a check on hunter reporting rates. While hunter interview information is subjective data, it can be of great help to the biologist in assessing harvest levels and harvest-related activities in his area.

FUR EXPORT AND FUR ACQUISITION REPORTS

Of the 18 furbearer species trapped in Alaska, only five have mandatory sealing requirements statewide. To estimate harvest of the remaining species, biologists may use information from raw fur export and fur acquisition reports. More frequently, when information is collected at all, it is obtained from trapper questionnaires and personal trapper interviews.

Fur acquisition reports are filled out by a fur buyer when raw furs are purchased from a trapper or fur dealer. A report of the transaction, showing species, number, and location in which the furs were trapped (GMU) is sent to ADF&G. Information on trapper residency, transport means, etc. are not available on fur export or acquisition reports. Fur acquisition reports may include reporting of animals taken in previous years.

Fur export reports are filled out when an individual sends raw furs out of state. The same information is collected from export reports as from acquisition reports, and the reports are sent to the Information Management Section in Anchorage for compilation.

Since fur reports provide a record of commercial transactions involving furs (animals kept for home tanning are not documented in fur reports), and are not an actual record of numbers of furbearers harvested in a given regulatory year, harvest estimate information extrapolated from fur reports should be considered marginal in quality. Raw fur purchase plus trapper export numbers have been summed for an *index* of harvest trends but do not necessarily reflect actual harvest. In view of this, the data on unsealed furbearers (See the *Historical Tables* section) should be interpreted as indicators of harvests, not actual harvest numbers. Since fur transactions do not necessarily reflect any given year's harvest, this data should not be used to predict or indicate harvest trends. Fluctuations from one year to the next do not necessarily reflect harvest fluctuations or population status.

HARVEST INFORMATION SOURCES: BY SPECIES

BEAVER

Beaver harvest information is collected from beaver sealing certificates. No data are available on unsuccessful beaver trappers, thus making trapper effort and percent success information also unavailable. Since there is a multiple-animal bag limit on beaver, harvest totals are generally larger than numbers of successful trappers.

Beaver sealing certificate data may be augmented by information from trapper questionnaires, hunter interviews, and fur acquisition and export reports.

BISON

Bison harvest in Alaska is regulated by drawing permit and registration permit only. Bison harvest information is collected from permit hunt reports submitted by permit holders at some specified time after each hunt or by personal interviews with hunters before they leave the area of the hunt. In the 1992-93 regulatory year, 150 drawing permits were issued. All 150 (100%) permit reports were returned.

BLACK BEAR

Black bear harvest information is collected from black bear sealing certificates. Since information collected is for successful hunters only, unsuccessful hunter residency, hunter effort and percent success figures are not available. In some units, a multiple-animal bag limit applies to black bear. In these cases, numbers of successful hunters may be smaller than total numbers of animals harvested. In some GMU's, black bears are not required to be sealed (see Sealing Certificates, above).

BROWN BEAR

Brown bear harvest information is collected from brown bear sealing certificates and from drawing and registration permit hunt reports. Special hunts are held on Kodiak, Southeastern Alaska, and in several game management units north of the Brooks Range. General season information on brown bear harvest is for successful hunters only; permit reports include unsuccessful hunter data as well. In 1992-93, 984 brown bear registration permits were issued, and 100% were returned. A total of 471 brown bear drawing permits were issued and 445 (98%) reports were returned. One Federal brown bear registration permit was issued and the report was returned.

CARIBOU

Caribou are a migratory species, and at any given time a caribou herd may range over more than one GMU or Subunit. When a caribou hunt is held, it generally applies to a specific herd rather than to a specific GMU/Subunit. Within Alaska, caribou are managed by herd. However, some biologists do examine their data on a GMU/Subunit basis as well. To accommodate both types of data collection, caribou harvest data is presented both ways, on a herd summary basis, and on an individual GMU/subunit basis. Because not all area biologists report their caribou harvest information by GMU/Subunit, the GMU information is incomplete. ***For the most accurate representation of the statewide caribou harvest, use the tables showing HARVEST BY HERD.*** These tables are found in the *SPECIES* section of this book. Because of problems with non-reporting in many general season areas, information on caribou harvest is especially limited. In the table which presents caribou harvest by herd, low estimates (representing reported harvest + the low estimate of unreported kills) and high estimates (representing reported harvest + high

estimates of unreported kills) are given. Reported harvest figures are obtained from returned harvest ticket reports. Keep in mind that both High Total Harvest, and Low Total Harvest figures are estimates because of under-reporting or non-reporting by many caribou hunters. In some cases, unreported harvest equals or exceeds the reported harvest from a given herd.

Reporting on caribou harvest regulated by the permit system is somewhat more reliable. In the 1992-93 caribou permit hunt seasons, 1,176 State drawing and registration non-subsistence permits were issued; 6,503 State Tier II subsistence permits were issued; 2385 Federal registration permits were issued. A total of 1,155 State hunt non-subsistence reports (98%) were returned; 6424 Tier II subsistence reports (99%) were returned; 2054 Federal hunt reports (86%) were returned.

In many units, a multiple-animal bag limit applies to caribou. In these cases, the numbers of successful hunters shown may be smaller than the total numbers of animals harvested.

COYOTE, FOX, MARTEN, MINK, MUSKRAT, SQUIRREL, AND WEASEL

Coyote, fox, marten, mink, muskrat, squirrel and weasel harvests are not easily documented since these furs are not required to be sealed (marten require sealing in GMU's 1-5, 7, 13(E) and 14-16). Documentation of unsealed furbearers is comprised of transactions between trappers and fur dealers, and records of shipments of furs outside the state, either for sale or for tanning. Because such transactions may include furs taken in previous years, and because many trappers, especially in Northern and Western Alaska, may keep their trapped furs for tanning and use at home, these documents are not especially useful for reflecting true harvest levels. In addition, non-reporting of transactions may be substantial. As a result, figures derived from these documents are useful only as trend indicators or as an index of harvest. Consequently, we have included only summarized numbers of furbuyers' acquisitions of furs from trappers, and numbers of furs exported by trappers for tanning in a special table in the *Historical Tables* section. Data are shown for 5 years, and should not be interpreted as a reflection of true harvest levels, but rather as indicators of overall trends over time. Year-to-year fluctuations have little meaning, since many trappers do not sell their furs every year, and many do not trap every year.

DEER

While harvest tickets are issued to deer hunters, no hunt reports are required upon completion of a hunt. Deer harvest information is routinely calculated through the use of deer surveys. For the 1992-93 Sitka Blacktail Deer harvest, 8045 deer surveys were issued for Southeastern and South Central Alaska, and 4079 were returned (51%). The survey covered harvests in Southeastern Alaska, Prince William Sound and Kodiak. Up to three follow-up questionnaires are sent to encourage hunters to report. Estimates of harvest size are calculated from questionnaire responses. In 1992-93, 763 deer registration permits were issued for newly-instituted hunts in Southeastern Alaska; 749 hunt reports (98%) were returned.

ELK

Alaska's Roosevelt Elk harvest is regulated by drawing permit and registration permit hunts. All legal elk harvest occurs on Raspberry and Afognak Islands, in the Kodiak Island archipelago, in GMU 8. Elk harvest information is obtained from permit hunt reports. In the 1992-93 regulatory year, 848 drawing and registration permits were issued, with a 96% permit hunt report return rate (811 returned).

LYNX

Lynx harvest information is collected from furbearer sealing certificates. No data are available on unsuccessful lynx trappers, thus making trapper effort and % success information also unavailable. Since there is a multiple-animal bag limit on lynx, harvest totals are generally larger than numbers of successful trappers.

Lynx sealing certificate data may be augmented by information from trapper questionnaires, hunter interviews, and fur acquisition and export reports.

MOOSE

Moose harvest information is collected from permit hunt reports, registration hunt reports, and harvest ticket hunt reports. For the 1992-93 regulatory year, there were 46,008 harvest tickets issued and 33,631 hunt reports returned (73%). A total of 2,866 State drawing and registration permits (non-Tier II) were issued, with 2,836 (99%) permit hunt reports returned. A total of 428 Tier II permits were issued, and 410 hunt reports (96%) were returned. Federal agencies issued 782 registration permits, and 706 reports were returned (90%).

MOUNTAIN GOAT

Mountain goat harvest information is collected from registration permit hunt reports and drawing permit hunt reports. There are no general seasons on mountain goats in Alaska. In the 1992-93 regulatory year, 1,976 registration permits were issued; 1,952 hunt reports (99%) were returned. In that same period, 493 drawing permits were issued, and 489 hunt reports (99%) were returned. Tier II permits issued numbered 95, with 95 (100%) being returned. Federal agencies issued 28 subsistence permits for mountain goats, and 24 reports were returned (86%).

MUSKOX

Muskox harvest information is collected from drawing, registration, and Tier II permit hunt reports. There are no general seasons on muskoxen in Alaska. In the 1992-93 regulatory year, 46 drawing permits were issued; 60 registration permits were issued; and 2 Tier II permits were issued. All permit reports (100%) were returned. Ten Federal muskox registration permits were issued; 9 (90%) were returned.

OTTER

River otter harvest information is collected from furbearer sealing certificates. No data are available on unsuccessful otter trappers, thus making trapper effort and percent success information also unavailable. Since there is a multiple-animal bag limit on otter, harvest totals are generally larger than numbers of successful trappers.

River otter sealing certificate data is frequently augmented by information from trapper questionnaires, hunter interviews, and fur acquisition and export reports.

SHEEP

Dall sheep harvest information is obtained from drawing and registration permit reports and from general season hunt reports. During the 1992-93 sheep hunting seasons, 7,427 harvest tickets were issued and 6,105 (82%) hunt reports were returned. During that same period, 627 dall sheep drawing permits were issued, and 627 (100%) permit hunt reports were returned. Forty-six Federal sheep permits were issued; 27 (59%) hunt reports were returned.

WATERFOWL

Statewide waterfowl harvest information is collected annually through the use of hunter surveys. The distribution of hunter questionnaires has been incorporated into the sales of the state duck stamp. Self-addressed, pre-paid questionnaires are issued to the purchasers of the first 2 stamps out of each booklet of 5 stamps (40% sample). Harvest and hunter activity are compiled from survey cards returned by a specified date. No reminder surveys are sent to non-respondents.

WOLF

Wolf harvest information is collected from furbearer sealing certificates. No data are available on unsuccessful wolf trappers and hunters, thus making trapper and hunter effort and % success information also unavailable. Since there is a multiple-animal bag limit on wolves, harvest totals are generally larger than numbers of successful trappers.

Wolf sealing certificate data may be augmented by information from trapper questionnaires, hunter interviews, and fur acquisition and export reports.

WOLVERINE

Wolverine harvest information is collected from furbearer sealing certificates. No data are available on unsuccessful wolverine trappers or hunters, thus making trapper and hunter effort and % success information also unavailable. Since there is a multiple-animal bag limit on wolverine, harvest totals are generally larger than numbers of successful trappers.

Wolverine sealing certificate data may be augmented by information from trapper questionnaires, hunter interviews, and fur acquisition and export reports.

[1]Acquisition data and export data are combined to account for furs acquired through trapping effort and consequently sold to furbuyers, plus furs exported out of state by trappers for tanning. Furs tanned within Alaska, either by home tanning or commercial methods, are not reflected in these data. These data are by no means comprehensive, and may not reflect furs trapped within a given year, as the furs reported on here may be kept for unspecified periods of time before being sold to fur dealers or exported for tanning. These data reflect fur transactions only, and may not accurately reflect actual furbearer harvests. These data are for unsealed furbearers only. More reliable data on sealed furbearers may be found elsewhere in this book.

[2]Marten are sealed in GMU's 1-5, 7, 13(E), and 14-16. Throughout the remainder of Alaska, no sealing of marten is required. Numbers of marten taken from areas where sealing is required may be found in the GMU and SPECIES sections of this book. The figures in this table include transactions with sealed as well as unsealed marten.

[3]Fur transactions without an accompanying GMU designation are assigned to "GMU 27", a fictional GMU used simply for information that cannot be assigned elsewhere. Many trappers do not indicate the GMU where furs were trapped when filling out acquisition and export forms. For more information, contact the Department of Fish and Game.

1992-93 REGULATIONS AND SEASONS

1992-93 ALASKA HUNTING AND TRAPPING REGULATIONS AND SEASONS

The Regulations and Seasons section of this book lists all hunting and trapping seasons open in Alaska during regulatory year 1992-93. The descriptions of the seasons, bag limits, hunt areas, and methods and means are the same as those listed in *Alaska Game Regulations, no. 33, effective July 1, 1992 - June 30, 1993.*

However,
The *season dates*, defined hunt areas and/or bag limits *have been adjusted to reflect actual opening and closing dates*, boundary changes or hunt conditions as mandated by Emergency Orders issued by state biologists.

Adjustment of season lengths is only one method by which harvest levels may be manipulated from year to year. When comparing differences in harvest levels between years, possible differences in season lengths, size and location of hunt areas, bag limits, and methods and means should be kept in mind. For a more detailed discussion of the limitations of multi-year comparisons, please refer to the *Introduction/How To Use This Book* section.
