Introduction
Subsistence fishing and hunting are important for the economies and cultures of many families and communities in Alaska. Subsistence uses exist alongside other important uses of fish and game in Alaska, including commercial fishing, sport fishing, personal use fishing, and general hunting. This report provides an update on subsistence fishing and hunting in Alaska, including the dual state–federal management system.

What is Subsistence Hunting and Fishing?
State and federal laws define subsistence uses as the “customary and traditional uses” of wild resources for food, clothing, fuel, transportation, construction, art, crafts, sharing, and customary trade. Subsistence uses are central to the customs and traditions of many cultural groups in Alaska, including Aleut, Athabascan, Alutiiq, Euro-American, Haida, Inupiat, Tlingit, Tsimshian, and Yupik. State law (AS 16.05.258(c)) requires the Joint Board of Fisheries and Game to identify “nonsubsistence areas” where subsistence is not “a principal characteristic of the economy, culture, and way of life.” Outside these nonsubsistence areas, called “rural areas” in this overview, subsistence fishing and hunting are important sources of employment and nutrition.

Commercial fishing differs from subsistence fishing because it is harvesting fish for sale in commercial markets. Subsistence-taken fish and game cannot be commercially sold. Personal use fishing is similar to subsistence fishing, except that it is fishing with efficient gear for food in nonsubsistence areas, particularly by residents of urbanized areas, or fishing for stocks without customary and traditional uses. Sport fishing and sport hunting differ from subsistence in that, although food is one product, they are conducted primarily for recreational values during breaks from work, following principles of “fair chase.” Outside nonsubsistence areas, subsistence harvesting and processing are productive, traditional economic activities that are part of a normal routine of work.

Who Qualifies to Participate in Subsistence Harvesting?
Federal and state laws currently differ in who qualifies for participation in subsistence fisheries and hunts. Rural Alaska residents qualify for subsistence harvesting under federal law. Under state law, only rural residents qualified for subsistence harvesting from 1978–1989. Since 1989, all state residents have qualified under state law. In 2012, about 83% of Alaska’s population (607,442 people) lived in nonsubsistence areas (urban areas) defined by the Joint Board of Fisheries and Game and about 17% (124,856 people in 263 communities) lived in rural areas (outside nonsubsistence areas) (Figure 1). In 2010, 55% of Alaska’s rural population and 12% of the urban population were Alaska Native.

Who Participates in Subsistence Uses?
Most families outside Alaska’s nonsubsistence areas depend on subsistence fishing and hunting. A substantial proportion of these households harvest and use wild foods (Figure 2). For surveyed communities outside nonsubsistence areas, 92%–100% of sampled households used fish, 79%–92% used wildlife, 75%–98% harvested Alaska’s population by area, 2012

- Anchorage area (291,826 - 41%)
- Matanuska–Susitna area (88,597 - 12%)
- Kenai Peninsula area (54,358 - 8%)
- Rural Southcentral (7,319 - 1%)
- Kodiak Island (13,592 - 2%)
- Rural Southest (26,912 - 4%)
- Rural Interior (9,886 - 1%)
- Arctic (24,271 - 3%)
- Western (23,013 - 3%)
- Prudhoe Bay (2,174 - <1%)
- Valdez (3,976 - <1%)
- Ketchikan area (13,477 - 2%)
- Juneau area (31,275 - 4%)
- Fairbanks-Delta area (103,378 - 15%)

Subsistence in Alaska:
A Year 2012 Update
fish, and 48%–70% harvested wildlife. Because subsistence foods are widely shared, most residents of these communities use subsistence foods during the course of the year. Under state law, residents of nonsubsistence areas may also participate in authorized subsistence fisheries and hunts.

What is the Composition of the Wild Food Harvest?
Outside the nonsubsistence areas, most of the wild food harvested by local residents is composed of fish (about 53% by weight), along with land mammals (23%), marine mammals (14%), birds (3%), shellfish (3%), and plants (4%) (Figure 3). Fish varieties include salmon (32% of all harvests), Pacific halibut, Pacific herring, and whitefishes. Seals, sea lions, walruses, and whales compose the marine mammal harvest. Moose, caribou, deer, bears, Dall sheep, mountain goats, and beavers are commonly used land mammals, depending on the community and area. These harvests for food occur within a range of regulatory categories, including subsistence and general hunting, and subsistence, personal use, and rod and reel fishing.

How Large is the Subsistence Harvest?
The subsistence food harvest by Alaska residents (about 36.2 million lb excluding wild plants) represents about 1.1% of the fish and game harvested annually in Alaska (Figure 4). This total includes all noncommercial harvests by residents of rural areas plus harvests taken under subsistence fishing and hunting regulations by residents of nonsubsistence areas. Personal use fishing, and hunting under general regulations by Alaskans, produce an additional 0.2% of all harvests. Sport fishing and hunting (sport fishing by Alaskans and nonresidents and all nonresident hunting) take 0.5%. Commercial fisheries account for the balance—about 98.2% of the statewide harvest.

Though relatively small in the statewide picture, subsistence fishing, hunting, and gathering provide a major part of the food supply of rural Alaska (see figures 5 and 6). Our best estimate is about 36.9 million lb (usable weight) of wild foods are harvested annually by residents of rural areas of the state, and 13.4 million lb by urban residents in all noncommercial fisheries and hunts (see Figure 6). On a per person basis, the annual wild food harvest is about 295 lb per person per year for residents of rural areas (about 0.8 lb a day per person), and 22 lb per person per year for urban areas (see Figure 5).
gatherers tend to harvest in traditional use areas surrounding their communities. Subsistence harvest areas are accessible from the community, although seasonal camps are used to access some species. Subsistence harvest areas for communities are definable and relatively predictable (see Figure 7).

The Monetary Value of Subsistence Harvests
Subsistence fishing and hunting are a principal characteristic of the rural Alaska economy. Attaching a dollar value to wild food harvests is difficult because subsistence products do not circulate in markets. However, if families did not have subsistence foods, substitutes would have to be purchased. If one assumes a replacement expense of $4.00–$8.00 per pound, the simple “replacement value” of the wild food harvests of communities outside nonsubsistence areas may be estimated at $147–$295 million annually, and at $201–$402 million for all Alaska communities (see Figure 6).

Subsistence and Money
Outside Alaska’s nonsubsistence areas, subsistence is part of an economic system called a “mixed, subsistence-market” economy. Families invest money into small-scale, efficient technologies to harvest wild foods, such as fish wheels, gillnets, motorized skiffs, and snowmachines. Subsistence food production is directed toward meeting the self-limited needs of families and small communities, not market sale or accumulated profit as in commercial market production. Families follow a prudent economic strategy of using a portion of the household monetary earnings to capitalize in subsistence technologies for producing food. This combination of money from paid employment and subsistence food production is what characterizes the mixed, subsistence–market economies outside nonsubsistence areas. Successful families in these areas combine jobs with subsistence activities and share wild food harvests

Traditional Harvest Areas
Studies show that Alaska subsistence hunters, fishers, and gatherers tend to harvest in traditional use areas surrounding their communities. Subsistence harvest areas are accessible from the community, although seasonal camps are used to access some species. Subsistence harvest areas for communities are definable and relatively predictable (see Figure 7).
Subsistence hunting and fishing are restricted in non-rural areas of Alaska by the federal and state programs. Federal law allows subsistence harvests only by residents of rural areas. State law permits subsistence harvests by any Alaska resident in areas outside the boundaries of “nonsubsistence areas.” The Alaska Joint Board of Fisheries and Game has determined that the areas around Anchorage, the Matanuska–Susitna Valley, the Kenai Peninsula, Fairbanks, Juneau, Ketchikan, and Valdez are nonsubsistence areas, where fish and game harvests may be allowed under sport, personal use, or commercial regulations, but not under subsistence regulations. The Federal Subsistence Board has defined similar non-rural areas. Also, Prudhoe Bay is non-rural under federal rules.

The Subsistence Priority
Subsistence uses of fish and land mammals are given a priority over commercial fishing and recreational fishing and hunting in state and federal law. This means that when the harvestable portion of a fish stock or game population is not sufficient for all public uses, subsistence uses are restricted last by regulation.

By and large, fishers and hunters living in nonsubsistence areas have not experienced major changes in harvest opportunities due to the subsistence priority. General hunting and sport fishing regulations continue to provide opportunities for all Alaska residents and nonresidents. Personal use net fisheries provide for established food fisheries of urban residents in areas closed to subsistence fishing. State subsistence fisheries and hunts are open to all Alaskans regardless of residence.

For example, during the 11-year period when the rural priority was being implemented under state management (1978–1989), general resident hunting seasons for caribou increased by 36% (from 5,505 days to 7,500 days), moose hunting days decreased by 10% (from 2,961 days to 2,671 days), and Dall sheep hunting days increased by 2% (from 1,855 days to 1,900 days)—comparing the 1978–1979 resident season with the 1989–1990 resident season. That is, during this period, hunting days by urban hunters for caribou, moose, and sheep were not significantly changed by the rural subsistence priority.

The greatest effect of state and federal subsistence laws has been to legally recognize customary and traditional harvest practices and uses outside of nonsubsistence areas. Because of the law, the Alaska Boards of Fisheries and Game and the Federal Subsistence Board have created subsistence regulations designed to provide opportunities for the continued harvest of the food supply so necessary in much of Alaska. While impacts on recreational fishing and hunting and on commercial fishing have been relatively small when sufficient resources have been available, the benefits for many families have been great. Alaska residents have a legally protected opportunity to fish and hunt to feed their families following long-term customs and traditions.
