

Board of Fisheries

January 15 – 23, 2018

Sitka, Alaska

RE: Herring Proposals
January 15, 2018

Dear Chairman Jensen and Board of Fish Members:

SEAS' believes in managing our great Alaskan fishery resources using the best biological data available. The Department manages the herring fishery conservatively, and given that the biomass has risen from 5,000 tons in the 1970's to the present day 55,000 tons is testament to their sound management.

Sincerely,

Susan Doherty

Executive Director, Southeast Alaska Seiners Association
