Re: Kuskokwim River Proposals, Prop. 111

I would be against the 8 inch mesh proposal, as we are still in conservation mode and rebuilding the king salmon stocks. If the 8 inch would be reinstated it would have harmful effects to the large spawners that produce the largest amount of eggs needed for future rebuilding of the King Salmon.

Therefore I would appreciate a no vote on the use of 8 inch mesh size that is proposed.

Nick Kameroff a subsistence user of the Kuskokwim River.
