Summary

- Salmon and other finfish are the largest portion of wild resource harvests in all CMA communities.
- The Board has made positive C&T and ANS findings for Chignik Area Salmon and Other Finfish in 1994 and revised in 2002.
- There are two distinctive use patterns for early and late run sockeye
- Subsistence harvests of **early-run sockeye were below the ANS** in the Chignik Bay District in **2004, 2012, 2014, and 2018**
- Subsistence harvests of **late-run sockeye were below the ANS** in the Chignik Bay District and has **only been met one year (2007)** since 2002, the year the ANS finding was modified.
