During Board of Fish meetings I’ve heard commercial fishermen say that they are over escap ing Red salmon into the rivers and streams. To prevent this from being a problem I propose that instead of closing Red fishing for sport, personal use, and subsistence fisherman, on July 31st that we leave the season open for another one to two weeks or the 15th of August. With this change sport, personal use and subsistence fishermen can help commercial fishing with their over escapement problem. It will also put more fish in the freezers and on the tables of the sport, personal use and subsistence fisherman.

What is the issue you would like the board to address and why? Over escapement of Red Salmon
