Proposal 24 is the 1993 Proposal submitted by Fish and Wildlife Protection to increase the minimum distance between drift and setnet gear from 50 fathoms to 60 fathoms. This was approved by the 1993 board, resulting in an enforceable fishery with significantly lower gear conflict in the Crafton Island Subdistrict.

Proposal 45 intends to find the same resolution in the Main Bay Subdistrict THA by increasing the minimum distance between set and drift gear from 25 fathoms to 30 fathoms.
