

Please submit the following as an RC

Board members,

-limit the closure to 300' above and 300' below the lower falls on both 108 creek and Log Jam creek only during the months of July, August and September for both proposals 152 & 153.

Although we haven't officially met to vote on this change, I believe the intent of the AC was to protect the spawning salmon in the pools below the lower falls of both 108 creek and Log Jam creek that are sitting ducks to anglers during the low water years.

These low water years have been happening with more frequency.

The mortality rates of catch and release practices are also much higher during low water years due to reduced oxygen levels in the warmer water.

Thank you,

Kurt Whitehead  
Secretary  
East PoW AC
