OEO/ADA Compliance Statement

The Commission is administratively attached to the Alaska Department of Fish and Game.

The Alaska Department of Fish and Game (ADF&G) administers all programs and activities free from discrimination based on race, color, national origin, age, sex, religion, marital status, pregnancy, parenthood, or disability. The department administers all programs and activities in compliance with Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, Title II of the Americans with Disabilities Act of 1990, the Age Discrimination Act of 1975, and Title IX of the Education Amendments of 1972.

If you believe you have been discriminated against in any program, activity, or facility please write:

- ADF&G ADA Coordinator, P.O. Box 115526, Juneau, AK 99811-5526
- U.S. Fish and Wildlife Service, 4401 N. Fairfax Drive, MS 2042, Arlington, VA 22203
- Office of Equal Opportunity, U.S. Department of the Interior, 1849 C Street NW, MS 5230, Washington DC 20240.

The department's ADA Coordinator can be reached via phone at the following numbers:

- (VOICE) 907-465-6077
- (Statewide Telecommunication Device for the Deaf) 1-800-478-3648
- (Juneau TDD) 907-465-3646
- (FAX) 907-465-6078

Abstract

This report examines limited entry permits held in the Cook Inlet commercial salmon fisheries, which include purse seine fishery (S01H permits), drift gillnet (S03H permits), and set gillnet (S04H permits). This report includes summary statistics on the number of permit holdings, permanent and emergency transfers of permits, permit value, permit latency, new entrants, permit holder mean age, estimated gross earnings, vessel characteristics for the purse seine and drift gillnet fisheries, dual permit operations in the drift gillnet fishery, stacked permit operations in the set gillnet fishery, and DNR shore fishery leases for the set gillnet fishery. Some summary statistics are also broken out by resident type. A description of the data and methods used to generate these statistics are provided.

Prepared by Daniel Strong

Introduction

In 1972, voters amended the Alaska Constitution to allow limited entry in the state's commercial fisheries. Following the amendment, in 1973 the Alaska State Legislature enacted the Limited Entry Act (the Act), giving the Commercial Fisheries Entry Commission (CFEC) the authority to administer the program. Permit fisheries are defined by CFEC as a specific gear type for a fishery resource within a defined administrative area. The Cook Inlet salmon fisheries were part of an original group of 19 Alaska salmon fisheries that were limited after the Alaska legislature passed the Act. Under the authority of AS 16.43.230, CFEC identified both the Cook Inlet drift and set net fisheries as "distressed fisheries" in the State's limited entry regulations.¹ Salmon limited entry permits in all three Cook Inlet fisheries were first issued in 1975.

Commercial fishing in Cook Inlet is documented as far back as 1893.² Historically, several gear types were employed to catch salmon including fish traps, gillnets, and seines. The three commercial salmon fisheries prosecuted today in Cook Inlet are: purse seine (S01H), drift gillnet (S03H), and set gillnet (S04H). Participation in commercial salmon fishing in the Upper and Lower Cook Inlet management areas differs by gear group. In the Upper Cook Inlet management area, most of the commercial salmon fishing is prosecuted by the set and drift gillnet fisheries. The use of purse seine gear is only employed by emergency order in the Chinitna Bay Subdistrict and was last used in 1982.³ In the Lower Cook Inlet management area, most of the commercial salmon fishing is prosecuted by the purse seine fleet along with a few of the set gillnet permit holders. Information regarding season length, openings and closings, size, and other such data can be found in the Alaska Department of Fish and Game's (ADF&G) Area Management Reports for Upper and Lower Cook Inlet.⁴

This report focuses on the economics of the Cook Inlet salmon commercial fisheries. ADF&G fish tickets identify, among other things, the species harvested. Salmon species on fish tickets are well documented for each of these fisheries. Sockeye salmon provides for most of the ex-vessel value in each of these fisheries except for pink salmon in the purse seine fishery. Note that variations do exist in the financial contribution for each of the five major salmon species commercially exploited in Cook Inlet from year to year and across each fishery. For each of the three gear groups, commercial harvest of species other than salmon were documented at rates less than 0.1% and are not displayed in Table 1.

Table 1. Percent of Total Ex-vessel Value of Cook Inlet by Salmon Species, 1975-2022

Species	Cook Inlet Purse Seine	Cook Inlet Drift Gillnet	Cook Inlet Set Gillnet	All Combined
Chinook salmon	0.1%	0.2%	3.9%	1.7%
sockeye salmon	36.2%	84.7%	86.6%	82.2%
coho salmon	1.5%	4.2%	5.9%	4.7%
pink salmon	45.6%	1.4%	2.1%	4.7%
chum salmon	16.6%	9.5%	1.5%	6.8%

Description of the Data Used to Generate This Report

Several data sources were used to generate the statistics in this report: gross earnings, permit, US Census data, vessel, and Alaska Department of Natural Resources (DNR) shore fishery lease data. In addition to these files, a shape file from the DNR was combined with geographic information systems (GIS) data to create a map showing set gillnet sites with active DNR shore fishery leases. The most recent updated data is included in this report. The following is a brief description of each data source. Please contact CFEC for more details about this data if you are interested. Real (2023) values were calculated using the U.S. Bureau of Labor Statistics Consumer Price Index.

Data Display

Percentages are rounded to the nearest tenth of a percent where displayed. Dollars are rounded to whole dollars. As such, aggregates may appear to not total due to rounding. If you would like more precise figures, then please contact the CFEC research unit. Some counts will vary from previous research projects insofar as the data has been corrected and updated.

CFEC Gross Earnings Data

The CFEC gross earnings data is based on ADF&G fish tickets and augmented with CFEC permit holder and other data. The ex-vessel value for salmon in the CFEC gross earnings data largely comes from the Commercial Operators Annual Report and ADF&G fish tickets with some additional information provided by processors. ADF&G salmon districts and subdistricts are determined from statistical areas on fish tickets. Several processes to validate and enhance fields such as vessel number and statistical area were undertaken to increase accuracy of this report. In instances where total earnings are provided and earnings are masked for confidentiality under one group (e.g. non-residents), it's necessary to mask earnings in other groups (e.g. residents) to protect confidentiality.

CFEC Permit Data

The CFEC permit data is of persons who hold or have held CFEC permits. It originates from CFEC permit renewal and permit transfer forms. The permit data includes declared residency and address of permit holders. In this report, resident status is categorized into three resident types:

- **Local**— permits held by people residing locally to the ADF&G management area.
- **Nonlocal**— permits held by persons who reside in Alaska outside of the ADF&G management area.
- **Nonresidents**— permits held by persons who are not residents of Alaska.

CFEC Vessel Data

CFEC maintains vessel registration data back to 1978. Commercial fishermen fill out a form and voluntarily provide data regarding the vessel they intend to use that fishing season.

DNR Shore Fishery Lease Data

The DNR Land Administration System contains records used to maintain the DNR Shore Fishery Lease program. These records are merged with CFEC permit data to create a dataset. Creation of the dataset is described in CFEC Report Number 23-5N, *CFEC Salmon Set Gillnet Permits and DNR Shore Fishery Leases in Prince William Sound, Cook Inlet, Kodiak, Cook Inlet, and Bristol Bay 1975-2022*.

CFEC Census Data

CFEC maintains a computer file of places within Alaska where permit holders reside. Each community is annotated with information on its local or nonlocal status by permit fishery. Table 2 lists the communities that are currently designated as local for salmon commercial fisheries in the Census file for this report.

Table 2. Communities Local to the Cook Inlet Salmon Fisheries, as Indicated in the CFEC Census File

Alexander	Eklutna	Kasilof	Point Possession
Alexander Creek	Elmendorf AFB	Kasitsna Bay	Port Graham
Anchor Point	English Bay	Kenai	Portage
Anchorage	Fire Island	Kern	Portlock
Bear Cove	Fire Lake	Knik	Potter
Bear Creek	Fort Richardson	Knik River	Primrose

Cooper Landing	Jakolof Bay	Palmer	Susitna
Crown Point	Kachemak	Peters Creek	Tyonek
Diamond Ridge	Kalifornsky	Point Mackenzie	Wasilla

Cook Inlet Salmon Purse Seine Fishery

S01H Permit Holdings

License limitation permits for the Cook Inlet salmon purse seine fishery (S01H permits) were issued starting in 1975. Table 3 indicates the initial distribution and historical net changes in permit holdings for the fishery. CFEC issued 85 S01H permits. Of this total, Alaska Locals received 97.6% (83) of the permits, Nonlocal Alaskans and Nonresidents received one permit each (1.2%). Every permit issued was a transferable permit.

Table 3. Initial Issuance and Year-end 2022 Totals of Cook Inlet Salmon Purse Seine Permits, With Net Changes Due to Permit Transfers, Migrations, and Cancellations, by Resident Type

Initial Issue			Transfers		Migrations		Cancelled		2022 Year-End	
Residency	Total	Percent	Change	Percent Change from Initial	Change	Percent Change from Initial	Change	Percent Change from Initial	Total	Percent
Local	83	97.6%	2	2.4%	-6	-7.2%	-5	-6.0%	74	92.9%
Nonlocal	1	1.2%	1	100.0%	-2	-200.0%	0	0.0%	0	0.0%
Nonresident	1	1.2%	-3	-300.0%	8	800.0%	0	0.0%	6	7.1%
Total	85	100.0%	0	0.0%	0	0.0%	-5	-6.0%	80	100.0%

The number of permits held by each resident type change for three reasons: permits can be transferred to other resident types (transfer); permit holders can move from one location to another (migration); or permits can be cancelled (such as when a permit holder does not pay the renewal fee for two consecutive years). This table indicates the extent to which these factors contributed to net changes in permit holdings in this fishery. Migrations had the largest impact on the changes.

Transfers of S01H Permits

Under the Act's terms of free transferability, permits may be sold, traded, given away, or inherited. CFEC requires the completion of a survey with each transfer.⁵ The surveys provide information such as transfer acquisition methods, the relationship between individuals in the transaction, and the sale amount for instances when the permit is sold.

Table 4. Transfer Acquisition Methods for Cook Inlet Salmon Purse Seine Permits, 1980-2022

Acquisition Method	S01H Permit		Cook Inlet Combined Salmon		Statewide Salmon Purse Seine		All Fisheries Statewide	
	Count	Percent	Count	Percent	Count	Percent	Count	Percent
Gift	102	38.5%	2,162	40.9%	1,148	27.7%	13,760	32.7%
Sale	137	51.7%	2,702	51.1%	2,621	63.2%	24,659	58.5%
Trade	4	1.5%	57	1.1%	64	1.5%	535	1.3%
Other	22	8.3%	369	7.0%	315	7.6%	3,183	7.6%
Total	265	100%	5,290	100%	4,148	100%	42,137	100%

Table 4 shows transfer acquisition methods for the S01H permits, all three Cook Inlet salmon permit types combined, statewide salmon purse seine permits, and all limited entry permits between 1980 and 2022. During the 1980 – 2022 period, just over half of all S01H permit transfers were sales (51.7%, or 137/265), a large percentage were transferred as gifts (38.5% or 102/265), and a smaller percentage were trades (1.5% or 4/265) or other (8.3% or 22/265). The annual acquisition methods for the limited S01H permits have not changed substantially throughout time.⁶

Table 5. Relationships of Transferor to Transfer Recipients for Cook Inlet Salmon Purse Seine Permits, 1980-2022

Relationship	S01H Permit		Cook Inlet Combined Salmon		Statewide Salmon Purse Seine		All Fisheries Statewide	
	Count	Percent	Count	Percent	Count	Percent	Count	Percent
Business Partner/Friend	41	15.5%	1,033	19.5%	724	17.5%	7,896	18.7%
Member of Immediate Family	99	37.4%	1,945	36.8%	1,323	31.9%	14,133	33.5%
Other Relative	20	7.5%	328	6.2%	154	3.7%	1,878	4.5%
Other	105	39.6%	1,984	37.5%	1,947	46.9%	18,230	43.3%
Total	265	100%	5,290	100%	4,148	100%	42,137	100%

Table 5 shows the relationships between the transferors and transfer recipients for S01H permits, all three Cook Inlet salmon permit types combined, statewide salmon purse seine permits, and all limited entry permits from 1980 to 2022. For the S01H permit transfers, both immediate family members and other relatives, total 45% (119/265) of all transfers. This compares to 43% (2,273/5,290) for all three Cook Inlet salmon permit types combined, 35.6% (1,477/4,148) for statewide salmon purse seine permits, and 38% (16,011/42,137) for all limited entry permits statewide.

⁵ CFEC implemented the transfer survey in 1980.

⁶ See *Changes in the Distribution of Alaska's Commercial Fisheries Entry Permits, 1975-2022*, CFEC Report No. 23-2N.

S01H Permit Value

While many permit transfers are non-monetary transactions (see Table 4), only arms-length market transactions where permits are sold are shown in Table 6. Permit values represent averages of all arms-length sale transactions over the year.

Table 6. CFEC Estimated Real Value of Cook Inlet Salmon Purse Seine Permits

Year	S01H Permit Sales	Permit Value	Standard Deviation
1987	11	\$158,800	\$13,200
1988	9	\$168,500	\$10,600
1989	3	\$210,300	\$39,000

2020	1	\$51,100	\$2,500
2021	2	\$43,600	\$4,400
2022	1	\$42,000	\$2,700

Emergency Transfers of S01H Permits

Commercial landings are made with either permanently held permits or permits held temporarily through emergency transfers. Emergency transfers (ET) of permits are granted if illness, disability, death, required military or government service, or other unavoidable hardship of a temporary, unexpected, and unforeseen nature prevents the permanent permit holder from participating in the fishery. “Hardship” does not include the results of a permit holder’s own economic decisions, or the results of economic, biological, or regulatory variables which are normally part of the risk of doing business as a fisherman. At the end of the year, ET permits automatically revert to the permanent permit holder.

Table 7 and Figure 1 show the total number of individuals who recorded landings each year and the number of those individuals who made landings with ET permits. Some individuals who made landings with emergency transfer permits also made landings with permanent permits in the same year.

Table 7. Use of Emergency Transfer Permits in the Cook Inlet Salmon Purse Seine Fishery, 1975-2022

Year	Individuals With Landings	ET Permit Holders With Landings	ET Rate	Year	Individuals With Landings	ET Permit Holders With Landings	ET Rate	Year	Individuals With Landings	ET Permit Holders With Landings	ET Rate

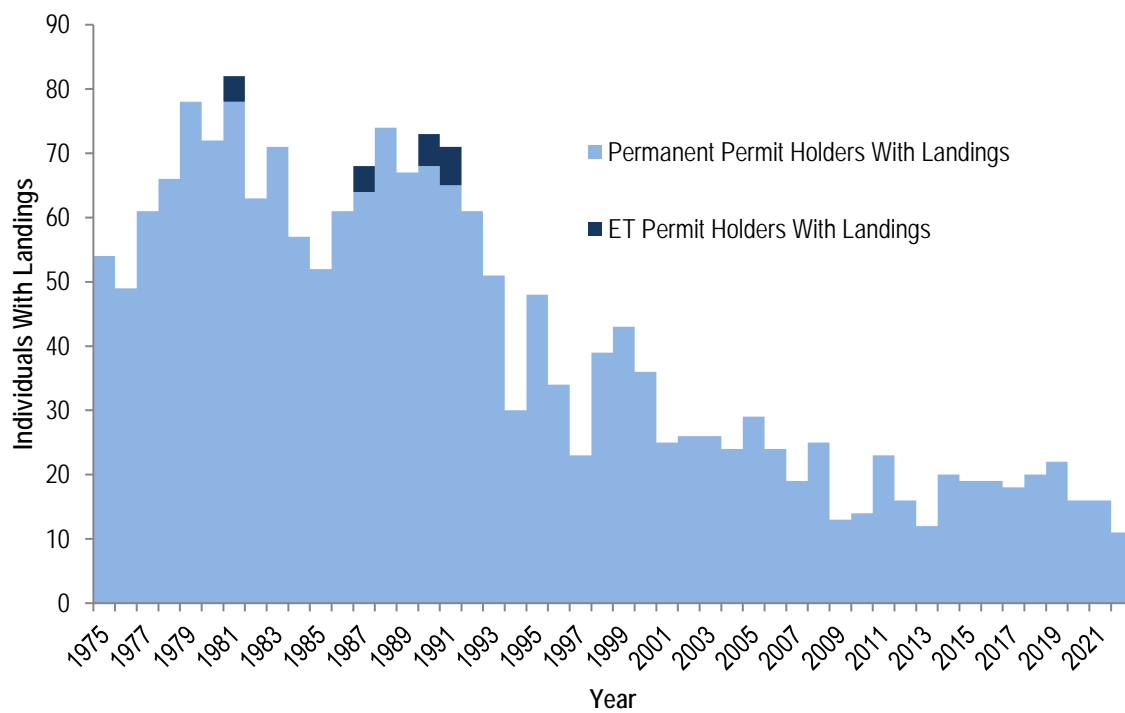

Figure 1. Use of Emergency Transfer Permits in the Cook Inlet Salmon Purse Seine Fishery, 1975-2022

Latent S01H Permits

CFEC regulations require individuals to renew their limited entry permits annually, regardless of whether they fish. Permits that are not used (don't record landings) are referred to as "latent" permits for that year. Table 8 indicates the total number of viable S01H permits issued each year, the number of permits fished (with commercial landings), and the rate of permit latency. Viable permits include both interim entry and permanent permits. In years when a single individual held an interim-entry permit and was also issued a permanent permit, only the permanent permit is counted. The rate of latency is also shown in Figure 2.

Table 8. Cook Inlet Salmon Purse Seine Permit Latency, 1975-2022

Year	Permits		Latency Rate
	Issued	Fished	
1975	89	54	39.3%

2022	84	11	86.9%

- When an individual with an interim-entry permit is issued a permanent permit in the same year, only the permanent permit is counted in the above table.
- 'Permits Fished' is the number of CFEC permits that were used to record commercial landings in a given year.

Cook Inlet Salmon Purse Seine (S01H)

Figure 2. Cook Inlet Salmon Purse Seine Permit Latency Rate, 1975-2022

New Entrants in the Cook Inlet Salmon Purse Seine Fishery

New entrants are individuals who recorded a landing on a permanent S01H permit for the first time. It is important to note that initial permit holders are not considered new entrants because they needed a proven fishing history prior to 1975 to qualify for a limited entry permit. Individuals who only make landings on an emergency transfer or interim-entry permit for any given year are not considered in this table.

Table 9 and Figure 3 describe individuals rather than permits. An individual may hold up to two permits for the same fishery but can only fish one of them. An individual may hold one S01H permit one year, and then in subsequent years hold a different S01H permit. Likewise, individuals may enter and exit the fishery multiple times over the years. Individuals are only counted once as a new entrant and only in the year in which they made their first documented landing.

Table 9. New Entrants into the Cook Inlet Salmon Purse Seine Fishery, 1975-2022

Year	Individuals w/Landings	New Entrants		Year	Individuals w/Landings	New Entrants		Year	Individuals w/Landings	New Entrants

- Mean Alaska Age is from the Alaska Department of Labor and Workforce Development, Research and Analysis Section.
- Age data from the CFEC permit file is as of December 31st of each year.

Table 10 shows the annual mean age of five cohorts of people: 1) Cook Inlet salmon purse seine (S01H) permit holders; 2) all three (S01H, S03H, and S04H) Cook Inlet salmon permit holders; 3) statewide salmon purse seine permit holders; 4) all CFEC limited entry permit holders; and 5) the general Alaskan population. Note that these figures include the ages of permit holders for both transferable and nontransferable permits; however, there were no nontransferable S01H permits issued. Some individuals hold permits in more than one fishery; in these cases, the age of the permit holder is counted once for each permit that he or she holds.

The mean age of the general Alaskan population increased 9.9 years between 1975 and 2022. The change in ages over the same period for all CFEC permit holders increased by 17.4 years, 10.4 years for the statewide salmon purse seine permit holders, and 14.8 years for the combined Cook Inlet salmon permit holders. For S01H permit holders, the mean age increased 14.2 years

Cook Inlet Salmon Purse Seine Vessel Characteristics

Table 11 reports on various vessel characteristics of the Cook Inlet salmon purse seine fleet since 1978. This data is from the vessel license file which includes voluntarily reported statistics of vessels. Reported are the age, length, net tonnage, horsepower, and hold capacity. The first column of each category reports the count of vessels with described characteristics. Statistics reported include the 25th percentile, mean, and 75th percentile.

Cook Inlet Salmon Purse Seine (S01H)

Table 12 provides additional Cook Inlet salmon purse seine vessel characteristics. Included are statistics for engine propulsion and hull material for each year since 1978.

Table 12. Additional Cook Inlet Salmon Purse Seine Vessel Characteristics

Participation and Earnings

Figure 4. Cook Inlet Salmon Purse Seine Permit Estimated Nominal and Real Average Gross Earnings

Table 13 reports the number of permits issued, permits and vessels with landings, and estimated gross earnings in the Cook Inlet salmon purse seine fishery from 1975 to 2022. Note that the figures by permit in this table span the entire year, regardless of who held the permit or however many times the permit was transferred. Table 14 reports the number of permit holders (people) and estimated real (inflation-adjusted) gross earnings by each resident type. Table 15 shows earnings by Cook Inlet subdistrict.

Permit counts include interim-entry permits and permanent permits. Interim-entry permits are issued to individuals during the period when their applications for permanent permits are in adjudication. The last year an interim-entry permit was held for the Cook Inlet salmon purse seine fishery was in 2008. Some individuals made landings on both an interim-entry permit and subsequently on their newly issued permanent permit in the same year; for these instances, only the permanent permit is counted in this report.

Table 13. Estimated Total Gross Earnings (Real and Nominal) for the Cook Inlet Salmon Purse Seine Fishery, With Average Earnings (Real) by Permit and Vessel, 1975-2022

- Counts will differ from CFEC on-line Basic Information Tables where the on-line data does not account for the combination of interim-entry permits that were issued as permanent permits in the same year. Note that these counts are for individuals, not permits.
- When fewer than four individuals make landings, earnings are masked (**) for confidentiality. Earnings and counts of individuals are masked in other groups to protect the confidentiality of the group where fewer than four individuals made landings.

- Some Permits were used to record landings in more than one district.

Cook Inlet Salmon Drift Gillnet Fishery

S03H Permit Holdings

License limitation permits for the Cook Inlet salmon drift gillnet fishery (S03H permits) were issued starting in 1975. Table 16 indicates the initial distribution and historical net changes in permit holdings for the fishery. CFEC issued 573 S03H permits. Of this total, Alaska Locals received 64% (367) of the permits, Nonlocal Alaskans received 3.7% (21) of the permits, and the remaining 32.3% (185) of the permits went to Nonresidents. Every permit issued was a transferable permit.

Table 16. Initial Issuance and Year-end 2022 Totals of Cook Inlet Salmon Drift Gillnet Permits, With Net Changes Due to Permit Transfers, Migrations, and Cancellations, by Resident Type

Initial Issue			Transfers		Migrations		Cancelled		2022 Year-end	
Residency	Total	Percent	Change	Percent Change from Initial	Change	Percent Change from Initial	Change	Percent Change from Initial	Total	Percent
Local	367	64.0%	73	19.9%	-45	-12.3%	-3	-0.8%	392	69.5%
Nonlocal	21	3.7%	-9	-42.9%	15	71.4%	0	0.0%	27	4.8%
Nonresident	185	32.3%	-64	-34.6%	30	16.2%	-1	-0.5%	150	25.7%
Total	573	100.0%	0	0.0%	0	0.0%	-4	0.3%	569	100.0%

The number of permits held by each resident type change for three reasons: permits transferred to other resident types (transfer); permit holders moving (migration); or permit cancellations (typically when a permit holder does not pay the renewal fee for two consecutive years). This table indicates the extent to which these factors contributed to net changes in permit holdings in this fishery. Transfers had the largest impact on the changes, particularly between locals and nonresidents. However, some of the changes were offset by migrations. Two of the four cancelled permits were due to nonpayment.

Transfers of S03H Permits

Under the Act's terms of free transferability, permits may be sold, traded, given away, or inherited. CFEC requires the completion of a survey with each transfer.⁷ The surveys provide information such as transfer acquisition methods, the relationship between individuals in the transaction, and the sale amount when the permit is sold.

Table 17. Transfer Acquisition Methods for Cook Inlet Salmon Drift Gillnet Permits, 1980-2022

Acquisition Method	S03H Permit		Cook Inlet Combined Salmon		Statewide Salmon Drift Gillnet		All Fisheries Statewide	
	Count	Percent	Count	Percent	Count	Percent	Count	Percent
Gift	1,295	46.0%	2,162	40.9%	6,857	51.2%	13,760	32.7%
Sale	1,300	46.1%	2,702	51.1%	5,127	38.3%	24,659	58.5%
Trade	21	0.7%	57	1.1%	97	0.7%	535	1.3%
Other	202	7.2%	369	7.0%	1,299	9.7%	3,183	7.6%
Total	2,818	100%	5,290	100%	13,380	100%	42,137	100%

Table 17 presents transfer acquisition methods for S03H permits, all three Cook Inlet salmon permit types combined, statewide salmon drift gillnet permits, and all limited entry permits between 1980 and 2022. During this period, nearly half of all S03H transfers were sales (46.1% or 1,300/2,818), about the same percentage were gifts (46% or 1,295/2,818), and a smaller percentage were trades (0.7% or 21/2,818) and other (7.2% 202/2,818). The annual acquisition methods for the limited S03H permits have not changed substantially throughout time⁸

Table 18. Relationships of Transferor to Transfer Recipients for Cook Inlet Salmon Drift Gillnet Permits, 1980-2022

Relationship	S03H Permit		Cook Inlet Combined Salmon		Statewide Salmon Drift Gillnet		All Fisheries Statewide	
	Count	Percent	Count	Percent	Count	Percent	Count	Percent
Business Partner/Friend	669	23.7%	1,033	19.5%	2,704	20.2%	7,896	18.7%
Member of Immediate Family	1,030	36.6%	1,945	36.8%	6,419	48.0%	14,133	33.5%
Other Relative	205	7.3%	328	6.2%	926	6.9%	1,878	4.5%
Other	914	32.4%	1,984	37.5%	3,331	24.9%	18,230	43.3%
Total	2,818	100%	5,290	100%	13,380	100%	42,137	100%

Table 18 shows the relationships between the transferors and transfer recipients for S03H permits, all three Cook Inlet salmon permit types combined, statewide salmon drift gillnet permits, and all limited entry permits from 1980 to 2022. Permit transfers, both between immediate family members and other relatives, total 43.8% (1,235/2,818) of all permit transfers for S03H permits compared to 43% (2,273/5,290) for all three Cook Inlet salmon permit types combined, 54.9% (7,345/13,380) for all statewide salmon drift gillnet permits, and 38% (16,011/42,137) for all limited entry permits statewide.

⁷ CFEC implemented the transfer survey in 1980.

⁸ See *Changes in the Distribution of Alaska's Commercial Fisheries Entry Permits, 1975-2022*, CFEC Report No. 23-2N.

S03H Permit Value

While many permit transfers are non-monetary transactions (see Table 17), only arms-length market transactions where permits are sold are shown in Table 19. Permit values represent averages of all arms-length sale transactions over the year.

Table 19. CFEC Estimated Real Value of Cook Inlet Salmon Drift Gillnet Permits

Year	S03H Permit Sales	Permit Value	Standard Deviation
1987	27	\$235,200	\$42,500

2021	15	\$25,700	\$3,900
2022	20	\$28,800	\$3,500

Emergency Transfers of S03H Permits

Commercial landings are made with permanently held permits or permits held temporarily through emergency transfers. Emergency transfers (ET) of permits are granted if illness, disability, death, required military or government service, or other unavoidable hardship of a temporary, unexpected, and unforeseen nature which prevents the permanent permit holder from participating in the fishery. “Hardship” does not include the results of a permit holder’s own economic decisions, or the results of economic, biological, or regulatory variables which are normally part of the risk of doing business as a fisherman. At the end of the year, ET permits automatically revert to the permanent permit holder.

Table 20 and Figure 5 show the total number of individuals who recorded landings each year and the number of these individuals who made landings with ET permits. Some individuals who made landings with ET permits also made landings with permanent permits in the same year.

Table 20. Use of Emergency Transfer Permits in the Cook Inlet Salmon Drift Gillnet Fishery, 1975-2022

Year	Individuals With Landings	ET Permit Holders With Landings	ET Rate	Year	Individuals With Landings	ET Permit Holders With Landings	ET Rate	Year	Individuals With Landings	ET Permit Holders With Landings	ET Rate
1975	467	19	4.1%	1991	585	27	4.6%	2007	417	20	4.8%

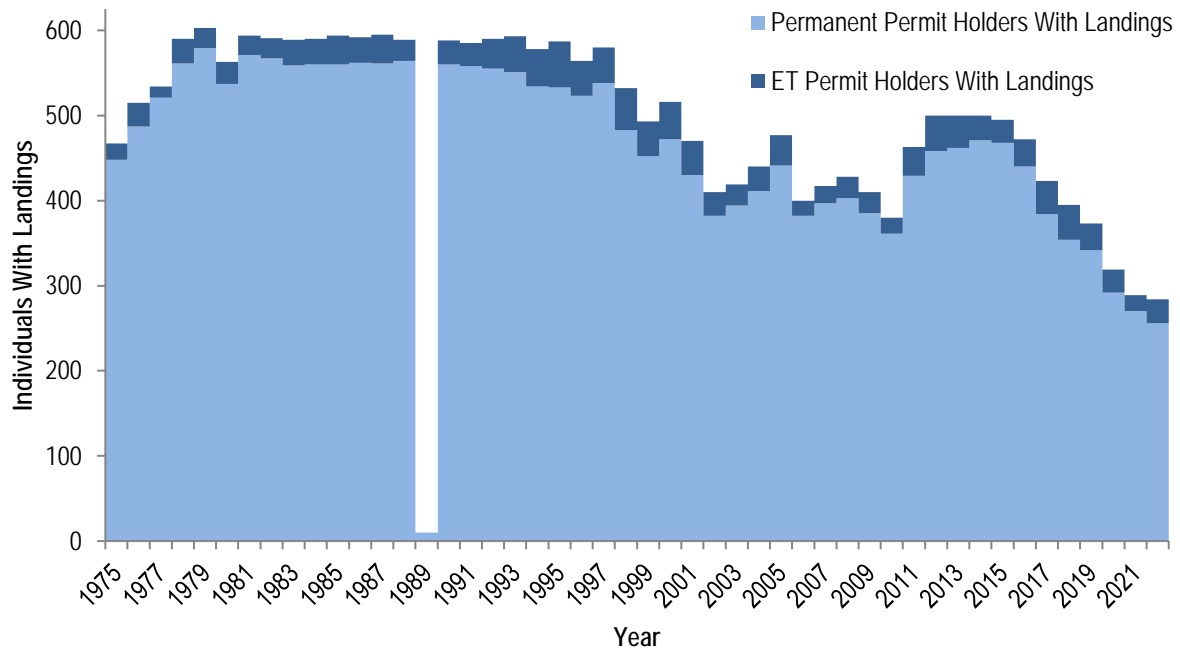

Figure 5. Use of Emergency Transfer Permits in the Cook Inlet Salmon Drift Gillnet Fishery, 1975-2022

Latent S03H Permits

CFEC regulations require individuals to renew their limited entry permits annually, regardless of whether they fish. Permits that are not used (don't record landings) are referred to as "latent" permits for that year. Table 21 shows the total number of viable S03H permits issued each year, the number of permits with commercial landings, and the rate of permit latency. Viable permits include both interim entry and permanent permits. Note that for this table, in years when a single individual held an interim-entry permit and was also issued a permanent permit, only the permanent permit is counted. The rate of latency is also depicted in Figure 6.

Table 21. Cook Inlet Salmon Drift Gillnet Permit Latency, 1975-2022

Year	Permits		Latency Rate
	Issued	Fished	
1975	636	466	26.7%

2021	567	343	39.5%
2022	567	342	39.7%

- When an individual with an interim-entry permit is issued a permanent permit in the same year, only the permanent permit is counted in the above table.
- 'Permits Fished' is the number of CFEC permits that were used to record commercial landings in that year.
- Exxon Valdez oil spill resulted in a drop in permits fished in 1989.

Cook Inlet Salmon Drift Gillnet (S03H)

Figure 6. Cook Inlet Salmon Drift Gillnet Permit Latency Rate, 1975-2022

New Entrants in the Cook Inlet Salmon Drift Gillnet Fishery

New entrants are individuals who recorded a landing for the first time on a permanent S03H permit. It is important to note that initial permit holders are not considered new entrants because they needed a proven fishing history prior to 1975 to become an initial permit holder. Individuals who only make landings on an emergency transfer or interim-entry permit for any given year are not considered in this table.

Table 22 and Figure 7 describe individuals rather than permits. An individual may hold up to two permits in this fishery but can only fish one of them. An individual may hold one S03H permit one year, and then in subsequent years hold a different S03H permit. Likewise, individuals may enter and exit the fishery multiple times over the years. Individuals are only counted once as a new entrant and only in the year in which they made their first documented landing on a permanent permit.

- This table excludes individuals with interim-entry and emergency transfer permits.

Cook Inlet Salmon Drift Gillnet (S03H)

Figure 7. Rate of New Entrants into the Cook Inlet Salmon Drift Gillnet Fishery, 1975-2022

Age of S03H Permit Holders

Table 23 shows the annual mean age of five cohorts of people: 1) Cook Inlet salmon drift gillnet (S03H) permit holders; 2) all three Cook Inlet salmon (S01H, S03H, and S04H) permit holders; 3) statewide salmon drift gillnet permit holders; 4) all CFEC limited entry permit holders; and 5) the general Alaskan population. The mean age of the general Alaskan population increased 9.9 years between 1975 and 2022, while the change in ages over the same period for all CFEC permit holders was 17.4 years, 7.5 years for the statewide drift gillnet permit holders, and 14.8 years for the combined Cook Inlet salmon permit holders. For S03H permit holders, the mean age increased 12.9 years.

Some individuals hold permits in more than one fishery; in these cases, the age of the permit holder is counted once for each permit that he or she holds. Alaska Mean Age is the annual average age of all Alaskans as reported by the Alaska Department of Labor and Workforce Development, Research and Analysis Section.

Table 23. Mean Age of Select CFEC Permit Holders and the General Alaskan Population

S03H Dual Permit Operations

The Alaska Board of Fisheries enacted 5 AAC 21.333 which allow for two Cook Inlet salmon drift gillnet permit holders to fish from a single vessel starting in 2008. Beginning in 2014, permit holders in dual permit operations no longer registered as dual operation; however, dual participation has been documented in fish tickets.

Figure 8 shows the percentage of landings for both single and dual permit operations by year between 2008 and 2022. Landings are defined as all landings made on a given day by a permit operation. Two permit holders made a commercial landing together as a dual permit operation were only counted as a single entity for that day. Some permit holders who participated in the fishery both as a single permit operation and part a dual permit operation had landings counted in both categories (on different days), depending how they were fishing the day the landing was made. In 2008, about 2% of all landings were made by dual permit operations. Over the last ten years, the rate of landings made by dual permit operations has fluctuated between 11.9% and 26.9%.

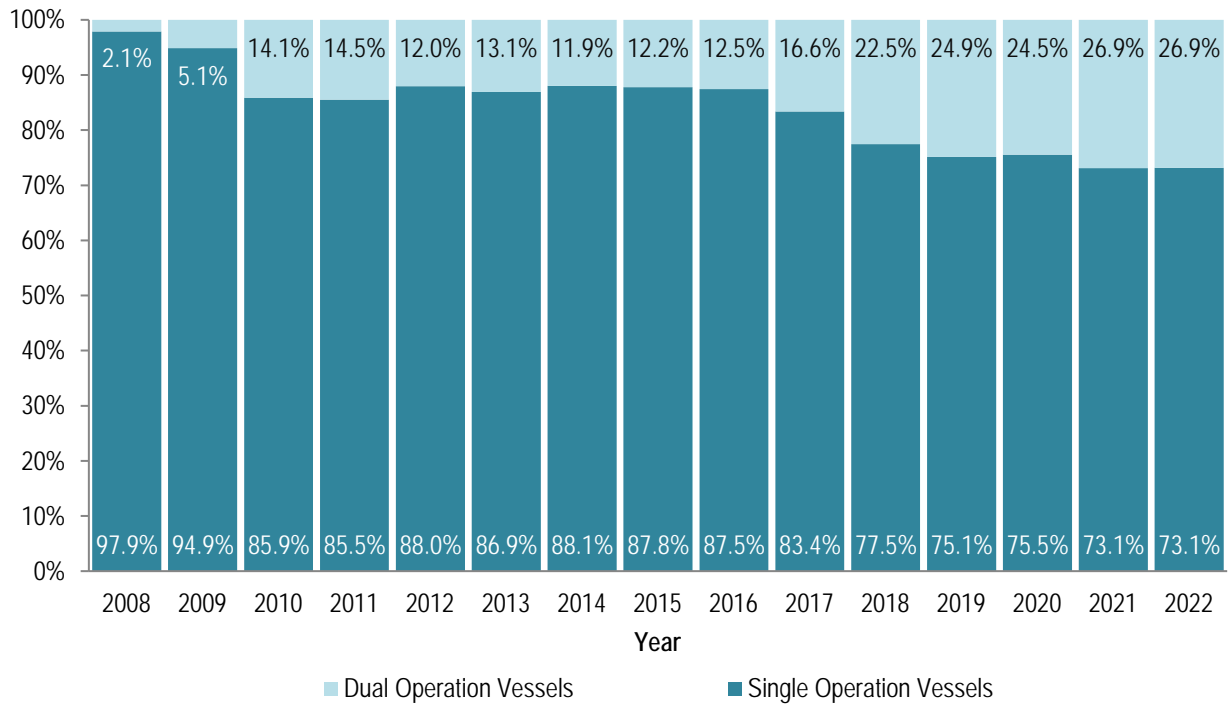

Figure 8. Cook Inlet Drift Gillnet Permit Landings by Operation Type, 2008 – 2022

Table 24 shows counts of dual permit operations with the use of either permanently transferred permits, or temporary emergency transfer permits, or both; however, when a permit was used as an emergency transfer permit, then subsequently permanently transferred to the permit holder, the permit was only counted as a permanent permit. Additionally, in dual-permit operations both permit holders and permits can change, so the permit operation counts may not always match the counts of permit holders.

Table 24. Use of Emergency Transfer Permits in S03H Dual Permit Operations

Year	Both Permanent		One Permanent		Both ET		Total
	Count	Percent	Count	Percent	Count	Percent	
2008	7	77.8%	2	22.2%	0	0.0%	9
2009	17	81.0%	4	19.0%	0	0.0%	21
2010	43	75.4%	14	24.6%	0	0.0%	57
2011	50	76.9%	15	23.1%	0	0.0%	65
2012	49	83.1%	10	16.9%	0	0.0%	59
2013	52	77.6%	15	22.4%	0	0.0%	67

2019	80	81.6%	15	15.3%	3	3.1%	98
2020	72	84.7%	11	12.9%	2	2.4%	85
2021	78	89.7%	7	8.0%	2	2.3%	87
2022	74	84.1%	10	11.4%	4	4.5%	88

Table 25 reports on the resident type combinations of the individuals in dual permit operations with landings. Resident type is counted as the residency status of the permit holder at the end of the year. The percentages are for the entire resident type participating in the fishery as dual permit operations. Note that permit holders can regroup, thereby increasing the total count of dual permit operations.

Table 25. Resident Type of Individuals in S03H Dual Permit Operations

Year	Both Local		Both Nonlocal		Both Nonresident		Local/Nonlocal		Local/Nonresident		Nonlocal/Nonresident		Total Combinations
	Count	Percent	Count	Percent	Count	Percent	Count	Percent	Count	Percent	Count	Percent

2021	64	73.6%	6	6.9%	15	17.2%	1	1.1%	1	1.1%	0	0.0%	87
2022	67	76.1%	6	6.8%	13	14.8%	1	1.1%	0	0.0%	1	1.1%	88

Table 26 reports earnings by resident type of permit holders and their operation type. Individuals that participated at any time in a dual permit operation are categorized as that type. Note that while Tables 24 and 25 count dual permit operations, Table 26 counts individuals, so earnings are averaged for individual permit holders rather than by permit.

Table 26. Earnings of S03H Permit Holders by Resident and Operation Type

Year	Residency	Operation Type	Permit Holders with Landings	Total Gross Earnings	Average Gross Earnings	Percent of Total

S03H Permit Stacking

In 2002, the Alaska Legislature amended Alaska Statute 16.43.140(c) to allow for individuals to hold two salmon permits. In 2006, the legislature passed House Bill 251 which allows the Alaska Board of Fisheries (BOF) the authority to grant fishing privileges to the second permit held by an individual. Since 2017, the BOF has allowed for stacked permit operations in the Cook Inlet drift gillnet fishery.⁹ A stacked permit operation is where an individual who holds two permits can fish up to 1½ full complements of gear. A single permit operation is where an individual only holds one permit. Appendix B lists regulations covering dual permits and permit stacking.

Reporting on counts of stacked permit operations is not a simple task. Permits can change hands multiple times throughout the year. An individual may fish in a single permit operation at the beginning of season then fish as a stacked operation after acquiring a second permit midseason. An individual in a stacked permit operation might use an Emergency Transfer permit for part of the season, and then have a permanently held second permit for the rest of the season. Table 27 provides data on participation in stacked permit operations. Note that this table reports on individuals and not permits.

Cook Inlet Salmon Drift Gillnet Vessel Characteristics

Table 28 reports on various vessel characteristics of the Cook Inlet Salmon drift gillnet fleet since 1978. Reported in this table are the age, length, horsepower, the presence of hold refrigeration, and hold capacity. This data is from the vessel license file which includes voluntarily supplied information on vessels. The first column of each category is the count of vessels with the described characteristics; other statistics reported include the 25th percentile, mean, and 75th percentile.

Participation and Earnings

Figure 9. Estimated Nominal and Real Average Gross Earnings Per Cook Inlet Salmon Drift Gillnet Permit

Table 30 reports the number of permits, permits and vessels with landings, and estimated gross earnings in the Cook Inlet salmon drift gillnet fishery from 1975 to 2022. Note that the figures by permit or vessel in this table span the entire year, regardless of who held the permit or however many times the permit was transferred. Table 31 reports the number of permit holders (people) and estimated real gross earnings by each resident type. Table 32 aggregates participation and earnings by subdistrict. Where fewer than four individuals made landings, earnings are masked for that group and at least one other for confidentiality.

Permit counts include interim-entry permits and permanent permits. Interim-entry permits are issued to individuals during the period when their applications for permanent permits are in adjudication. The last year an interim-entry permit was held was in 2005. Some individuals made landings on both an interim-entry permit and subsequently on their adjudicated permanent permit in the same year; for these instances, only the permanent permit is counted.

Table 30. Estimated Total Gross Earnings (Real and Nominal) for the Cook Inlet Salmon Drift Gillnet Fishery, With Average Earnings (Real) by Permit and Vessel, 1975-2022

Year	Permits Issued	Total Gross Earnings		Permits With Landings	Average Real Earnings	Vessels With Landings	Average Real Vessel Earnings

- Counts will differ from CFEC on-line Basic Information Tables where the on-line data does not account for the combination of interim-entry permits that were issued as permanent permits in the same year. Note that these counts are for individuals, not permits.
- Exxon Valdez oil spill resulted in very few people fishing in 1989.
- Where fewer than four individuals made landings, earnings are masked for that group and at least one other for confidentiality.

- Some permits were used to record landings in more than one district. Data is masked for confidentiality when fewer than four individuals are included in the count.

Cook Inlet Salmon Set Gillnet Fishery

S04H Permit Holdings

License limitation permits for the Cook Inlet salmon set gillnet fishery (S04H permits) were issued starting in 1975. Table 33 indicates the initial distribution and historical net changes in permit holdings for the fishery. CFEC issued 746 S04H permits. Of this total, Alaska Locals received 87% (649) of the permits, Nonlocal Alaskans received 5.5% (41) and Nonresidents received 7.5% (56) of the permits. Every permit issued was a transferable permit.

Table 33. Initial Issuance and Year-end 2022 Totals of Cook Inlet Salmon Set Gillnet Permits, With Net Changes Due to Permit Transfers, Migrations, and Cancellations, by Resident Type

Residency	Initial Issue		Transfers		Migrations		Cancelled		2022 Year-end	
	Total	Percent	Change	Percent Change from Initial	Change	Percent Change from Initial	Change	Percent Change from Initial	Total	Percent
Local	649	87.0%	-1	-0.2%	-40	-6.2%	-8	-1.2%	600	81.3%
Nonlocal	41	5.5%	-36	-87.8%	19	46.3%	-1	-2.4%	23	3.4%
Nonresident	56	7.5%	37	66.1%	21	37.5%	-1	-1.8%	113	15.3%
Total	746	100.0%	0	0.0%	0	0.0%	-10	-0.8%	736	100.0%

The number of permits held by each resident type change for three reasons: permits are transferred to other resident types (transfer); permit holders move (migration); or permits are cancelled (typically when a permit holder does not pay the renewal fee for two consecutive years). This table indicates the extent to which these factors contributed to net changes in permit holdings in this fishery. Migrations had the largest impact on the changes.

Transfers of S04H Permits

Under the Act's terms of free transferability, permits may be sold, traded, given away, or inherited. CFEC requires the completion of a survey with each transfer.¹⁰ The surveys provide information such as transfer acquisition methods, the relationship between individuals in the transaction, and the sale amount for instances when the permit is sold.

Table 34. Transfer Acquisition Methods for Cook Inlet Salmon Set Gillnet Permits, 1980-2022

Acquisition Method	Cook Inlet Salmon Set Gillnet		Combined Cook Inlet		Statewide Salmon Set Gillnet		All Fisheries Statewide	
	Count	Percent	Count	Percent	Count	Percent	Count	Percent
Gift	1,295	46.0%	2,162	40.9%	6,857	51.2%	13,760	32.7%
Sale	1,300	46.1%	2,702	51.1%	5,127	38.3%	24,659	58.5%
Trade	21	0.7%	57	1.1%	97	0.7%	535	1.3%
Other	202	7.2%	369	7.0%	1,299	9.7%	3,183	7.6%
Total	2,818	100.0%	5,290	100.0%	13,380	100.0%	42,137	100.0%

Table 34 presents transfer acquisition methods for S04H permits, all three Cook Inlet salmon permit types combined, statewide salmon set gillnet permits, and all limited entry permits between 1980 and 2022. During this period, the majority of S04H permit transfers were either gifts (46% or 1,295) or sales (46.1% or 1,300), and a smaller percentage were trades (0.7% or 21) or other (7.2% or 202). The annual acquisition methods for limited S04H permits have not changed substantially throughout time.¹¹

Table 35. Relationships of Transferor to Transfer Recipients for Cook Inlet Salmon Set Gillnet Permit, 1980-2022

Relationship	Cook Inlet Salmon Set Gillnet		Combined Cook Inlet		Statewide Salmon Set Gillnet		All Fisheries Statewide	
	Count	Percent	Count	Percent	Count	Percent	Count	Percent
Business Partner/Friend	669	23.7%	1,033	19.5%	2,704	20.2%	7,896	18.7%
Member of Immediate Family	1,030	36.6%	1,945	36.8%	6,419	48.0%	14,133	33.5%
Other Relative	205	7.3%	328	6.2%	926	6.9%	1,878	4.5%
Other	914	32.4%	1,984	37.5%	3,331	24.9%	18,230	43.3%
Total	2,818	100.0%	5,290	100.0%	13,380	100.0%	42,137	100.0%

Table 35 shows the relationships between the transferors and transfer recipients from 1980 to 2022 for S04H permits, all three Cook Inlet salmon permit types combined, statewide salmon set gillnet permits, and all limited entry permits. Permit transfers between immediate family members and other relatives total 43.8% (1,235/2,818) of all transfers of S04H permits, compared to 43% (2,273/5,290) for all three Cook Inlet salmon permit types combined, 54.8% (7,345/13,380) for statewide salmon set gillnet permits, and 38% (16,011/42,137) for all limited entry permits statewide.

¹⁰ CFEC implemented the transfer survey in 1980.

¹¹ See *Changes in the Distribution of Alaska's Commercial Fisheries Entry Permits, 1975-2022*, CFEC Report No. 23-2N.

S04H Permit Value

While many permit transfers are non-monetary transactions (see Table 34), only arms-length market transactions where permits are sold are shown in Table 36. Permit values represent averages of all arms-length sale transactions over the year.

Table 36. CFEC Estimated Real Value of Cook Inlet Salmon Set Gillnet Permits

Year	S04H Permit Sales	Permit Value	Standard Deviation

2021	15	\$19,300	\$1,600
2022	4	\$16,700	\$300

Emergency Transfers of S04H Permits

Commercial landings are made with either permanently held permits or permits held temporarily through emergency transfers. Emergency transfers (ET) of permits are granted if illness, disability, death, required military or government service, or other unavoidable hardship of a temporary, unexpected, and unforeseen nature prevents the permanent permit holder from participating in the fishery. “Hardship” does not include the results of a permit holder’s own economic decisions, or the results of economic, biological or regulatory variables which are normally part of the risk of doing business as a fisherman. At the end of the year, ET permits automatically revert to the permanent permit holder.

Table 37 and Figure 10 show the total number of individuals who recorded landings each year, and of that group, the number of individuals who made landings with ET permits. Some individuals who made landings with ET permits also made landings with permanent permits in the same year.

Table 37. Use of Emergency Transfer Permits in the Cook Inlet Set Gillnet Fishery, 1975-2022

Year	Individuals With Landings	ET Permit Holders With Landings	ET Rate	Year	Individuals With Landings	ET Permit Holders With Landings	ET Rate	Year	Individuals With Landings	ET Permit Holders With Landings	ET Rate

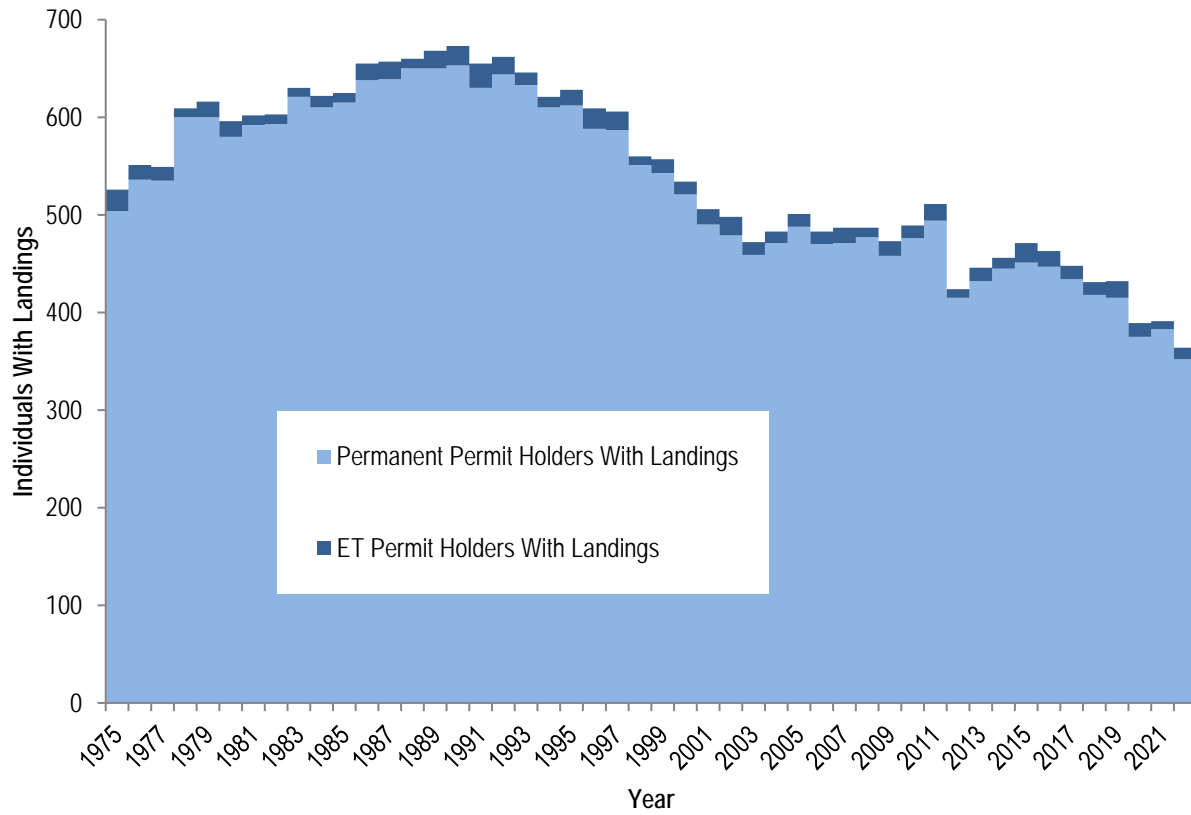

Figure 10. Use of Emergency Transfer Permits in the Cook Inlet Salmon Set Gillnet Fishery, 1975-2022

Latent S04H Permits

CFEC regulations require individuals to renew their limited entry permits annually, regardless of whether they fish. Permits that are not used (don't record landings) are referred to as "latent" permits for that year. Table 38 shows the total number of viable S04H permits issued each year, the number of permits with commercial landings, and the rate of permit latency. Viable permits include both interim entry and permanent permits.

In some cases, it's difficult to accurately count the number of latent permits. For example, permits might be active in the fishery but might not be used to record landings. This can occur when permit holders fish in a group, especially among family or friends, and the group records their landings on only one, or some, of the group's permits. Although this practice is not legal,¹² it allegedly occurs in the set gillnet fisheries at a rate higher than in other fisheries. Thus table 38 likely under-counts the number of permits active in the fishery, overestimating the latency rate.

Table 38. Cook Inlet Salmon Set Gillnet Permit Latency, 1975-2022

Year	Total Permits	Permits With Landings	Latency Rate

- When an individual with an interim-entry permit is issued a permanent permit in the same year, only the permanent permit is counted.

DNR Shore Fishery Leases in the Cook Inlet Set Gillnet Fishery

The Alaska Department of Natural Resources (DNR) administers a shore fishery lease program for the use of state owned and managed tidelands by S04H permit holders. A shore fishery lease grants permit holders the first right of priority to fish a tract of tidelands but is not a requirement to commercially fish. In Cook Inlet, the DNR shore fishery lease program allows a permit holder to maintain up to two tracts per permit.¹³ While some tracts are adjacent to one another, other tracts may be scattered miles apart even spanning multiple statistical areas. Additional information regarding DNR shore fishery leases can be found in CFEC publication 23-2N.¹⁴ Please see Appendix A for a snapshot of DNR shore fishery sites in Cook Inlet.

The total number of Cook Inlet set gillnet permits, permits with landings, and permits with a DNR shore fishery lease as of December 31 is reported by ADF&G salmon district in Table 39. While there are no restrictions as to which district an S04H permit can be used to make landings, the majority of S04H permit holders typically did not make landings in more than one district. Data is reported as it was documented in ADF&G fish tickets and from the DNR online Land Administration System.

New Entrants in the Cook Inlet Salmon Set Gillnet Fishery

New entrants are defined as individuals who record a landing for the first time on a permanent S04H permit. It is important to note that initial permit holders are not considered new entrants because they needed a proven fishing history prior to 1975 to become an initial permit holder of a limited entry permit. Individuals who only make landings on an emergency transfer or interim-entry permit for any given year are not considered in this table.

Table 40 and Figure 11 describe individuals rather than permits. An individual may hold up to two permits in this fishery but can only fish one of them. An individual may hold one S04H permit one year, and then in subsequent years hold a different S04H permit. Likewise, individuals may enter and exit the fishery multiple times over the years. Individuals are only counted once as a new entrant and only in the year in which they made their first documented landing.

2021	53.0	53.6	49.5	53.7	36.6
2022	53.5	54.4	49.9	54.2	36.9

- Age data from the CFEC permit file is as of December 31st of each year.

Table 41 shows the annual mean age of five cohorts of people: 1) Cook Inlet Salmon set gillnet (S04H) permit holders; 2) combined Cook Inlet Salmon permit holders; 3) all salmon set gillnet permit holders statewide; 4) all CFEC limited entry permit holders; and 5) the Alaskan population.

Note that these figures include the ages of permit holders for both transferable and non-transferable permits. Some individuals hold permits in more than one fishery; in these cases, the age of the permit holder is counted once for each permit that he or she holds. The mean age of the general Alaskan worker age population increased 9.9 years between 1980 and 2022, while the change in ages over the same period for all CFEC permit holders was 17.4 years, 12.0 years for the statewide set gillnet permit holders, and 14.8 years for the combined Cook Inlet Salmon permit holders. For S04H permit holders, the mean age increased by 16.1 years.

S04H Permit Stacking

Table 42 provides data on upper Cook Inlet participation in stacked permit operations. Note that this table reports on individuals and not permits. Appendix B lists regulations covering dual permits and permit stacking.

Participation and Earnings

Figure 12. Estimated Nominal and Real Average Gross Earnings Per Cook Inlet Salmon Set Gillnet Permit

Table 43 reports the number of permits, permits issued, and vessels with landings, and estimated gross earnings in the Cook Inlet Salmon set gillnet fishery from 1975 to 2022. Note that the figures by permit or vessel in this table span the entire year, regardless of who held the permit or however many times the permit was transferred. Table 44 reports the number of permit holders (people) and estimated real gross earnings by resident type. Table 45 aggregates participation and real gross earnings by subdistrict.

Permit counts include interim-entry permits and permanent permits. Interim-entry permits are issued to individuals during the period when their applications for permanent permits are in adjudication. The last year an interim-entry permit was held in the Cook Inlet Salmon set gillnet fishery was in 1997. Some individuals made landings on both an interim-entry permit and subsequently on their newly issued permanent permit in the same year; for these instances, only the permanent permit is counted in this report.

Table 43. Estimated Total Gross Earnings (Real and Nominal) for the Cook Inlet Salmon Set Gillnet Fishery, With Average Gross (Real) Earnings by Permit and Vessel, 1975-2022

Year	Permits Issued	Total Gross Earnings		Permits With Landings	Average Real Earnings	Vessels With Landings	Average Real Vessel Earnings

- Some permits are used to record landings in more than one district or subdistrict.

Appendix A. DNR Shore Fishery Lease Locations

- **ARL** – Alaska Rural Local
- **ARN** – Alaska Rural Nonlocal
- **AUL** – Alaska Urban Local
- **AUN** – Alaska Urban Nonlocal

Appendix B. Dual and Stacked Permit Regulations

Dual Permits:					
Fishery and Code	First Season in Effect	Basic Regulation	Identification	Special Considerations	Regulations
Cook Inlet Salmon Drift Gillnet S03H	2008	Two permit holders may fish from a single vessel; the vessel's total allowable gear increases from 150 to 200 fathoms	Vessels display a 'D' adjacent to the license plate when fishing 2 permits. Otherwise, the 'D' is to be covered.	Dual-permit operations are not allowed in certain restricted fishing areas	5 AAC 21.333
Stacked Permits					
2002: AS 16.43.140 (c) was amended to allow individuals to hold two salmon limited entry permits in the same fishery.					
2006: AS 16.05.251 (i) gives the BOF the authority to grant fishing privileges to the second permit held by an individual.					
Fishery and Code	First Season in Effect	Basic Regulation	Identification	Special Considerations	Regulations
Cook Inlet Salmon Drift Gillnet S03H	2017	Permit holders may own and fish 2 permits simultaneously. Their allowable gear increases from 150 (with 1 permit) to 200 fathoms of drift gillnet gear.	Vessels display a 'D' adjacent to the license plate when fishing 2 permits. Otherwise, the 'D' is to be covered		5 AAC 21.333(a)
Cook Inlet Salmon Set Gillnet S04H	2011	Permit holders may own and fish 2 permits simultaneously. Their allowable gear doubles from 4 nets and 105 fathoms to 210 fathoms in aggregate, with no single net longer than 35 fathoms, of which no more than 105 fathoms may be more than 29 meshes in depth in the Upper Subdistrict. (Depth modification made by Board-Generated Proposal A at the 2014 Upper Cook Inlet Finfish meeting).	Persons who fish 2 permits are issued 2 permit cards. Each are standard cards and either can be used to record a landing. Gillnet buoys must be marked with a 'D' and with both permit numbers when the operation fishes 2 permits. The identification buoy attached to gillnet gear of no more than 29 meshes in depth must be marked with a "D 29" following the CFEC permit holder's permit number.		5 AAC 21.331
