

RC by Loren Leman 7/28/24

Modify KPFA proposal (Proposal 96) as follows:

In Kaslof Section, during July 2-16:

- Two 8-hour openings per week
- 1/2 mile limit
- If  $> 50$  kings (LLRKK) are harvested, this 2-week period is closed until July 17.
- Change 1 net at 35 fm limit to just 35 fm limit/permit (allows breaking 35 fm into two shorter lengths). This was an administrative oversight.  
Rationale:

1. This time frame is the likely peak of sockeye harvest, especially for the southern end of the Kaslof Section (south of Clam Gulch Rd - stat area 244-21).
2. LLRKK, if in the section, are more likely to be in deeper water
3. This protects the Kenai Section for its openings from July 17-29, ensures that the impact on LLRKK is de minimus, and allows harvest on the substantial Kaslof run of sockeye, which is likely to become surplus to escapement needs.

Def: LLRKK = Large late run Kenai Kings
