

ROLLING START TIMES FOR ESSN's

Please consider substitute language in ALL of the proposed Stock of management Concern Action Plans on the table that reference "low tide Based on Seldovia Tide Tables."

The entire intent of such language is to avoid fishing the portion of the tide cycle when shallow nets will be hanging at maximum depth. Understand that low tide is NOT when water movement stops. There is still a considerable runout of the ebb well after posted low tide... sometimes an hour or more during the largest tidal exchanges of the lunar cycle. **To be clear, low tide is NOT low slack.**

"Low tide "should therefore be replaced with LOW SLACK in order to effectively accomplish the intent of this.
