

PROPOSAL 60

5 AAC 92.123. Intensive Management Plans VII.

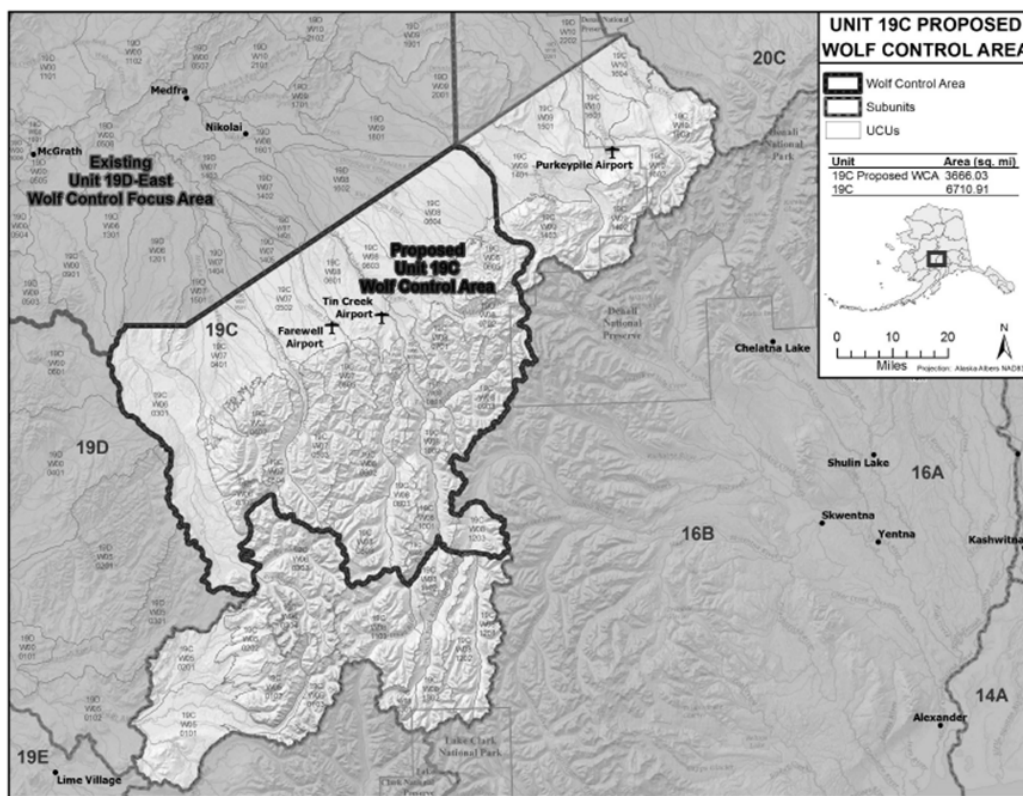

Allow aerial wolf control in a portion of Unit 19C as follows:

Allow for aerial predator control of wolves beginning in regulatory year 2024 in the portions of Unit 19C as defined in the proposal between November 1st and April 30th.

What is the issue you would like the board to address and why? Allow for predator control for wolves in a portion of Unit 19C (see map), beginning in RY2024.

Currently wolves prey heavily on moose in this area, which has recently seen declining moose numbers. The area is used heavily by hunters who rely on moose meat. There is currently very little harvest of wolves in this area.

Additionally, increased harvest of wolves in this area would likely benefit populations of moose, Dall sheep, bison and caribou in the area which have seen recent declines.

PROPOSED BY: McGrath Fish and Game Advisory Committee
