Comment:

large number of wolve packs are on in Unit 26a right now, in one pack 70 -100 wolves.

This is an alarming number of predators on our Teshekpuk Herd and any herd in Unite 26a right now. Pack of wolves that many is taking a good chunk of our herd as we speak. The Inupiat people are not the main predators at moment. Allow unrestricting taking of wolves as an emergency declaration to revitalize WACH and protect the Teshekpuk herd in the Arctic Slope of Alaska
