Add new creek w/coho Salmon Pending
DU & CT anadromy unknown

Additional Comments: This information was collected as part of the ADF&G Fish Passage Project. This nomination supports the addition for presence of dolly varden char, coho salmon, and cutthroat trout in a small uncatalogued tributary to Rio Roberts River (102-70-10580-2023). Pitting and corrosion within pipe, water appears heavily tannic. Beaver dams up and downstream, no widths taken. Inlet perch is organic material. Partially backwatered at outlet. Coho salmon, dolly varden char, and cutthroat trout trapped. Recommend further investigation to establish extent of anadromy, all species present, and correct stream coarse. Creek flows downstream into a large pond, but coarse from there is hard to determine, it's possible this creek eventually flows into AWC #102-70-10580-2023-3018, which is a tributary of Rio Roberts River. Trap A set 80 feet upstream, Trap B set 75 downstream.
