March 2023

The Regional Information Report Series was established in 1987 and was redefined in 2007 to meet the Division of Commercial Fisheries regional need for publishing and archiving information such as area management plans, budgetary information, staff comments and opinions to Alaska Board of Fisheries proposals, interim or preliminary data and grant agency reports, special meeting or minor workshop results and other regional information not generally reported elsewhere. Reports in this series may contain raw data and preliminary results. Reports in this series receive varying degrees of regional, biometric, and editorial review; information in this series may be subsequently finalized and published in a different department reporting series or in the formal literature. Please contact the author or the Division of Commercial Fisheries if in doubt of the level of review or preliminary nature of the data reported. Regional Information Reports are available through the Alaska State Library and on the Internet at: <http://www.adfg.alaska.gov/sf/publications/>.

Product names used in this publication are included for completeness and do not constitute product endorsement. The Alaska Department of Fish and Game does not endorse or recommend any specific company or their products.

ABSTRACT

This report describes the harvest strategy for the 2023 Kodiak Management Area (KMA) commercial Pacific herring *Clupea pallasii* sac roe fishery and includes the 2023 guideline harvest levels (GHL) by section, management changes from previous years, and reporting and registration requirements. The 2023 KMA areawide GHL is 8,650 tons and 22 GHLs have been established for individual and combined sections.

Several regulation changes occurred at the January 2020 Board of Fisheries meeting in Kodiak. The season start date was changed to April 1, extending the season length from April 1 through June 30. The allocative management plan that assigned GHLs and sections by gear type was removed, and both gear types can now fish the same sections. Fishing periods were also changed so that purse seine permit holders and gillnet permit holders fish on alternating days. Purse seine fishing periods will remain the same, but gillnet fishing periods will be from noon on even-numbered days to noon on odd-numbered days.

The only fishing periods will be those that fall under the “standard” fishing schedule established in regulation (5 AAC 27.510). Due to monitoring constraints, ADF&G will not actively manage sections for roe quality on the grounds by emergency order in 2023. All commercial fishery participants are urged to check with their buyer to determine what roe recovery and size limits will be marketable.

Key words: sac roe, herring, *Clupea pallasii*, guideline harvest levels, GHL, Kodiak Management Area, KMA, harvest strategy, Fisheries Management Report, FMR.

INTRODUCTION

The Alaska Department of Fish and Game (ADF&G) Division of Commercial Fisheries staff in Kodiak will manage the 2023 Kodiak commercial Pacific herring *Clupea pallasii* sac roe fishery. This report presents the harvest strategy for the Kodiak Management Area (KMA) herring sac roe fishery, including the guideline harvest levels (GHL) by section, fishing periods, changes in management, and reporting and registration requirements for the 2023 fishery.

The Kodiak herring sac roe fishery begins April 1 and lasts until June 30 (5 AAC 27.510 (a)). The fishery is intended to occur in an orderly fashion, with minimal waste of resource and within conservation limits as determined by ADF&G, and to strive for the highest quality product (5 AAC 27.535(e)(6)). The fishery will be managed in accordance with general statewide herring guideline harvest policies, which provide for catches in traditional inshore areas, management for the greatest value, and exploitation (harvest) not to exceed 20% of the available spawning biomass. Conservative GHLs are established due to the uncertainty in estimating individual section populations.

The KMA is divided into 13 districts that define areas used to manage the herring sac roe fishery (Figure 1; Table 1). Each district is further divided into smaller areas called sections. There are 81 sections in the KMA that define spawning areas or historical harvest locations. Current statistical charts, which illustrate districts and sections, are available at the ADF&G office in Kodiak (Figure 1).

GHLs are preseason harvest projections that are established for individual or combined sections by Kodiak ADF&G fishery management biologists (Table 1). After a review of stock status trends for the entire KMA, ADF&G determines which sections will be open to commercial fishing and what level of harvest will be targeted. Each section’s GHL is based on the following: 1) fishery performance during the preceding season or seasons (using total harvest, timing, duration of fishery, or average school size); 2) trends in age composition; 3) spawn and juvenile herring observations; 4) aerial surveys; and 5) hydroacoustic surveys. Information from commercial fishery participants and spotter pilots are also considered in setting a GHL.

2023 HARVEST STRATEGY

REGULATION CHANGES

During the January 2020 Board of Fisheries (BOF) meeting in Kodiak, there were several major changes that affected the management of the Kodiak herring sac roe fishery; they included the following items:

- The season start date was changed to April 1 from April 15.
- The allocative management plan that provides opportunities for gillnet permit holders to harvest approximately 25% and purse seine permit holders to harvest approximately 75% of the GHL was removed.
- Both gear types will be allowed to fish the same sections on alternating days. Purse seine fishing periods will remain from noon to 9:00 p.m. on odd-numbered days and from 9:00 a.m. to noon on even-numbered days. Gillnet fishing periods were changed to noon on even-numbered days to noon on odd-numbered days.

GUIDELINE HARVEST LEVELS

For the 2023 season, GHLS have been established for 22 individual or combined sections (Table 1). Six sections had little or no harvest during the last 10 years and are designated as exploratory in 2023. Exploratory areas are open to both gear types and have no set GHL. The remaining sections will remain closed, based on either low abundance or lack of herring sac roe harvests.

The 2023 areawide GHL of 8,650 tons (Table 1) is 575 tons more than the 2022 GHL (Table 2).

COMBINED SECTIONS

The following adjacent sections will be combined and managed as a single section for the 2023 sac roe herring season ((5 AAC 27.535(e)(1)(A)); Table 1):

- The Izhut Bay, Kitoi Bay, and MacDonald Lagoon Sections;
- The Paramanof Bay and Foul Bay Sections;
- The Village Islands, Northeast Arm Uganik, East Arm Uganik, and South Arm Uganik Bay Sections;
- The Terror Bay, Viekoda Bay, and West Uganik Passage Sections;
- The Inner Uyak and Browns Lagoon Sections;
- The Zachar Bay and Spiridon Bay Sections;
- The Outer Kiliuda Bay and Inner Kiliuda Bay Sections;
- The Outer Ugak Bay and Inner Ugak Bay Sections;
- The East Sitkalidak and Tanginak Anchorage Sections;
- The West Sitkalidak, Barling Bay, Newman Bay, and Three Saints Bay Sections;
- The Southwest Sitkalidak and Kaiugnak Sections;
- The Outer Deadman, Inner Deadman, Sulua Bay, and Inner Alitak Sections; and,
- The Lower Olga, East Upper Olga, and West Upper Olga Bay Sections.

FISHING PERIODS

Daily Fishing Periods for Purse Seine and Gillnet

Unless otherwise specified by emergency order (EO), herring may be taken during the sac roe season from April 1 through June 30 as follows:

- For purse seine permit holders: from April 1 through May 7, fishing periods are from noon until 9:00 p.m. on odd-numbered days and from 9:00 a.m. until noon on even-numbered days. From May 8 through June 30, fishing periods are from noon until 10:00 p.m. on odd-numbered days and from 9:00 a.m. until noon on even-numbered days (5 AAC 27.510(a)(1)).
- For gillnet permit holders: Beginning April 2, fishing periods are from noon on even-numbered days until noon on odd-numbered days (5 AAC 27.510(a)(2)).

DELAYED OPENINGS

The initial opening will be delayed in some sections until an ADF&G field crew can be stationed to monitor the fishery. An advisory announcement will be issued at least 24 hours in advance of an opening in these sections. Once open, fishing periods will be as stated in 5 AAC 27.510(a)(1) and 5 AAC 27.510(a)(2). The initial opening will be delayed in the following sections:

- The Inner Ugak Bay and Outer Ugak Bay Sections;
- The Browns Lagoon and Inner Uyak Bay Sections; and,
- The Zachar Bay and Spiridon Bay Sections.

TEST FISHING

ADF&G staff will not conduct roe recovery testing; industry personnel (processor technicians, fishery participants, or tender staff) are expected to determine roe quality. Instructions on how to determine roe quality and recovery percentages may be available from buyers and processors. Additionally, processors establish minimum size requirements (average weights) for the herring that they will purchase. All commercial fishery participants are urged to check with their buyer to determine what roe recovery and size limits will be marketable.

ADF&G AND INDUSTRY COOPERATION

There will be a registration requirement that will require permit holders to report harvest location and tonnage immediately after landing herring. Fishermen should immediately contact the area management biologists in Kodiak, or onboard the R/V *K-Hi-C* or the R/V *Resolution*, when a harvest occurs. Timely harvest reporting is essential to managing the Kodiak herring fishery. ADF&G staff will make frequent contact with permit holders to collect harvest data, fleet movement information, spawn observations, and observations of juvenile and adult herring concentrations. If cooperation is lacking, **closure of sections may be necessary**, and future openings will be closely evaluated. Fishermen are strongly encouraged to sample catches prior to landing in order to harvest the highest value product possible.

Permit holders and spotter pilots are encouraged to provide biomass estimates, juvenile herring observations, and spawn observations to ADF&G management staff. Past cooperation has helped staff evaluate stock status and gain critical management information. All information from

commercial fishery participants and spotter pilots will remain confidential. Of particular interest are any observations of herring in closed management sections. Timely information will be used by management staff to conduct aerial or hydroacoustic surveys to assess herring abundance.

Samples from commercial herring harvests will be collected by ADF&G management biologists. These are primarily used to monitor age composition, and when used with other stock performance indicators, to assist in determining stock status. Support and assistance from the industry is necessary for this style of fishery management to be successful. This support will result in a more manageable fishery and greater economic benefit to the permit holders and will help ensure the long-term health of KMA herring stocks.

CATCH REPORTING FOR BUYERS AND TENDERS

Processors and independent tender operators are required to provide daily catch reports by section to the Kodiak ADF&G office by 9:00 a.m. Herring onboard tenders that have not yet been delivered to a processing facility must also be reported. Timely and accurate harvest reports received from field crews, permit holders, tender operators, spotters, and processors are critical in the assessment of herring harvests and guide the management of the fishery. Late or inaccurate information could result in premature area closures or overharvest. Catch reporting procedures and ADF&G contact information is listed on the registration permit.

PERMIT HOLDER REGISTRATION

ADF&G will require permit holders to register prior to participating in the 2023 fishery. It is the responsibility of the permit holders to keep ADF&G informed of fishing activity and report herring harvests daily. The registration permit will outline reporting requirements by gear type. Failure to maintain contact with ADF&G will result in closures.

Purse seine permit holders are reminded that they may use only 1 purse seine vessel to harvest herring; this may be either the vessel identified on the permit card or a replacement vessel. If a Kodiak sac roe seine permit holder intends to fish with a different vessel than is listed on their permit card, they must register the replacement vessel with Kodiak management staff (5 AAC 27.525(d)).

REGISTRATION PERMIT

Each KMA tender operator and buyer must obtain a registration permit from ADF&G in the Kodiak office, either in person or through an authorized agent (5 AAC 27.540). A registration permit is required prior to taking fish onboard the tender or taking fish at the processing plant. Tenders are required to complete ADF&G fish tickets for each delivery. The fish ticket must have the fishery participant's permit information legibly recorded and must show how many pounds or tons of fish were harvested (the on-the-grounds weight), date of harvest, and section from which the fish were harvested.

TRANSPORTER PERMITS

All KMA herring sac roe permit holders that intend to transport herring, other than their own commercially harvested herring, are required to have in their possession a fish transporter permit (AS 16.05.671). Permit applications are available at the Kodiak ADF&G office.

EMERGENCY ORDER ANNOUNCEMENTS

When a GHL for a section is approached or achieved, that section will be closed for the remainder of the season. Due to the rapid pace of the harvest in certain locations, inperiod closures are likely. When inperiod closures are necessary, there may be as little as 5 minutes advance notice prior to the closure time, or less if appropriate. Inperiod closures will be announced on VHF channel 6. Fishermen and tender operators should monitor VHF channel 6 to remain aware of section closures.

ADF&G may use EO authority to restrict fishing time and close areas in any section if overharvest concerns exist during the season. Sections may be closed if resources are not available to monitor the fishery and there are overharvest concerns. At any time during the season, if ADF&G determines that herring stock abundance is below preseason expectations, sections may be closed prior to reaching their GHL.

An advisory announcement will be issued to announce fishery decisions such as openings, closures, and area restrictions. Advisory announcements are posted on the ADF&G website and distributed to processors, local radio stations, newspapers, and other interested parties.

All permit holders, tender operators, and processors are responsible for staying updated on section closures as they occur inseason. Fishery information can be obtained in the following ways:

- Contact the herring management staff (Table 3) in the Kodiak office in person, by telephone at 486-1830, or by using Dispatch #7410.
- Contact ADF&G field personnel on VHF channel 6 or using Dispatch (R/V *K-Hi-C*: #7412, RV *Resolution*: #7411).
- Contact any local herring processor for the latest Kodiak herring advisory announcement.
- Call the ADF&G message phone at 486-4559.
- Obtain a copy of the most recent advisory announcement from the Kodiak ADF&G office at 351 Research Ct. (copies are available 24 hours a day in a bin located outside the main entrance to the building).
- Advisory announcements may also be searched for and subscribed to on the internet at <http://www.adfg.alaska.gov/index.cfm?adfg=cfnews.main>.
- Contact ADF&G biologists after hours at the following numbers:

James Jackson – 907-942-2097

Todd Anderson – 701-214-7667

Geoff Spalinger – 952-567-1420

Brad Fuerst – 907-539-9033
