Four Mile Lake Trail

(as seen by Erik Alley + Kelly Krueger)

Notes - Mixed

- 4 wheel drive trucks have been through part way back to the lake, tearing up the bog in some areas & leaving pits & ruts in trails.
- the bog is quite open - sparse black spruce here & there
- the bog is solid Hummocks - very rough.
- the trail is made up of detours & optional routes, the main (original?) trail has cut itself deep into the ground (Mud) - naturally, being the lowest area it holds the water - with water actually trickling Down it in streaches, as it it were a ditch.
- Depending on which route you take, it is common to have to detour around or go through deep/large holes of mud & water. Deep enough to bog down many ATVs. But, you can pick your way around them.
- Trail width varies: 4WD trucks have at one time made it most of the way back, but on the average the wet areas are ATV size wide, with the dry areas about 7 to 10 ft. wide.

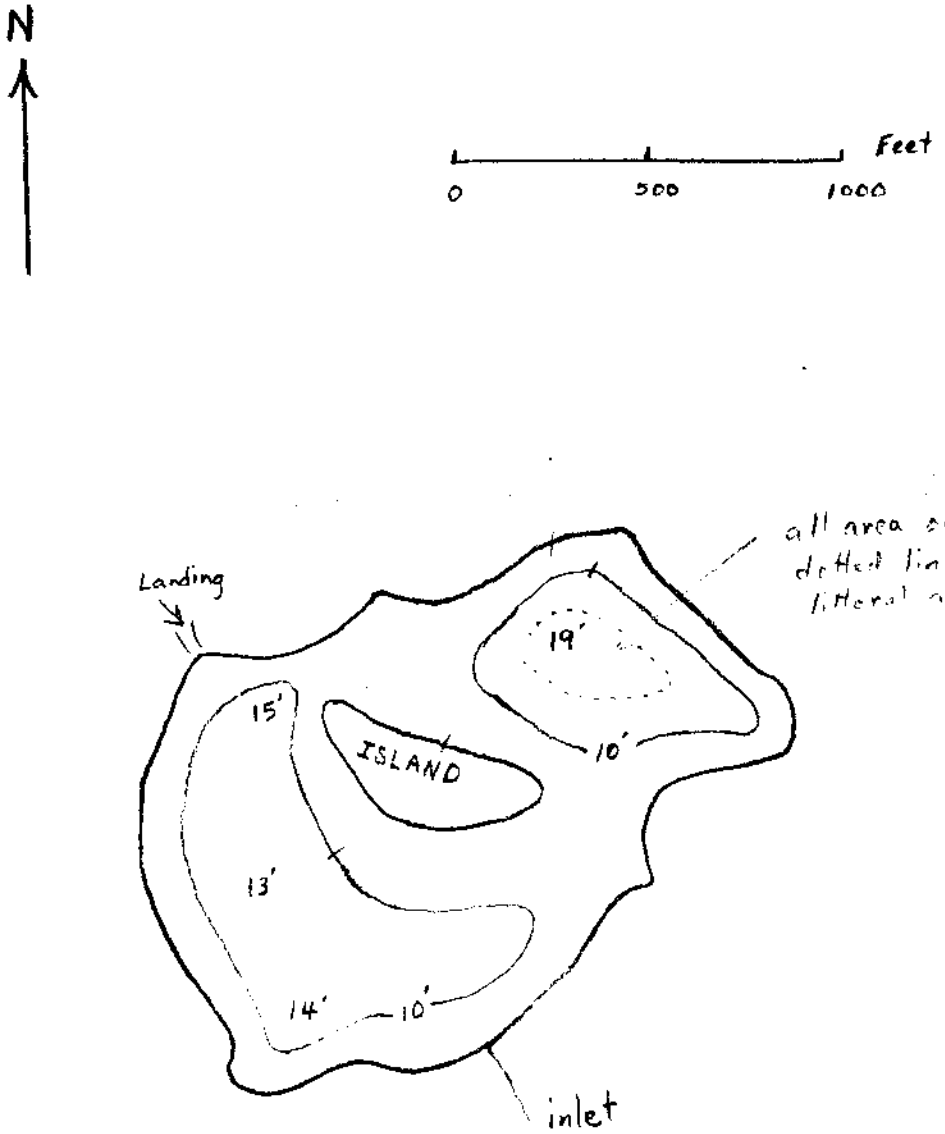

Notes: continued

- the camping area at the lake is quite nice. Underbrush has been cleared leaving large white Spruce, with places for fires + open, level areas for tent set ups.
- Some areas of the trail you tend to keep to the hummocks + pick your own route - this is rough but out of the mud.
- Foot passage: at most times of year rubber boots or hip boots are a must.
- In some areas people have tried to lay trees in the ruts - but this is no help - inefficient in future also - because must walk across bog to trees, cut tree + drag back - far too time consuming.

- 4 Boats at lake
- TRASH Hauled out 6/12/91 JP
