JUSTIFICATION:

The Kasaan Bay spot shrimp stock has been surveyed by the department annually since 2011. There were steady declines in survey catch per unit effort (CPUE) from 2020 through 2022. Department survey data from fall 2023 indicated a sharp decline in survey CPUE as well as a reduction in all size classes of shrimp and extremely poor recruitment of small class sizes indicating poor abundance of recruits and pre-recruits. For the 2024/25 season, continued poor department survey results combined with poor commercial fishery performance data in the previous two seasons indicate that shrimp populations cannot support sustainable harvest at this time.

The closure is being implemented along with closures of the personal use and commercial shrimp fishery with the intention to allow the spot shrimp abundance in Kasaan Bay and Skowl Arm to rebuild to levels that allow sustainable harvest for all user groups. This closure will remain in effect through 2025 and will be evaluated after the departments fall survey.
