KODIAK SUBSISTENCE SALMON FISHERY ADVISORY ANNOUNCEMENT # 01 **For Emergency Order #4-FS-K-Sub-01-25**

Karluk River Chinook salmon escapements have experienced record lows over the past two seasons: only 379 fish in 2023 and 76 fish in 2024. These escapements are far below the established Biological Escapement Goal (BEG) range of 3,000 to 6,000 Chinook salmon.

Due to recent record low Chinook salmon escapements, it is not expected that the Karluk Chinook salmon BEG range of 3,000–6,000 fish will be achieved in 2025. The sport fishery in both the freshwater and saltwater near the Karluk Drainage will also be closed. The commercial seine fishery in the Kodiak area is restricted to nonretention of Chinook salmon 28-inches or greater in length prior to July 6 and further commercial salmon fishery restrictions are likely.

Effective at 12:01 a.m. Thursday, May 1, until 11:59 p.m. Wednesday December 31, Chinook salmon in the Karluk River drainage, including the Karluk River lagoon, may not be retained in the subsistence fishery.

The department will continue monitoring the Karluk Chinook salmon run through June and early July to determine if subsistence fishing for Karluk Chinook is justified.

The Alaska Department of Fish and Game, under the direction of the Alaska Board of Fisheries, manages sport, commercial, personal use, and state subsistence harvest on all lands and waters throughout Alaska.
