**SITKA SOUND HERRING FISHERY UPDATE # 15**

Today's aerial survey covered Sitka Sound from Windy Passage to Salisbury Sound. No herring schools were visible from the air today. Approximately 31.9 nautical miles (nmi) of herring spawn was observed on Middle Island, Crow Island, Gagarin Island, Whiting Harbor, along the causeway, from Indian River to Jamestown Bay, from Whale Island to Galankin Island, from Hayward Strait to Eastern Bay, the Magoun Island, the Siginaka Islands, from Samsing Cove to Long Island, Cape Burunof, Povorotni Point, Redoubt Bay, and in Windy Passage (Figure 1). Since March 22, a cumulative total of approximately 71.4 nmi of herring spawn has been observed in Sitka Sound.

An opening of the Sitka Sound herring sac roe fishery occurred today from 9:00 a.m. until 7:00 p.m., as stated in field announcement on VHF channel 10. The open area for this fishery included the waters of Deep Inlet, Aleutkina Bay, and contiguous waters south of 57°00.81' N lat and east of 135°23.16' W long, and in the waters within 3 nmi from the Baranof Island shoreline south of the latitude of Cape Burunof at 56°59.07' N lat and north of 56°41.75' N lat (near Aspid Cape), except for the waters of Whale and Necker Bays (Figure 2). The emergency order corresponding with today's opening is EO 1H1025.

The department has determined that the opening described above would not harm a reasonable opportunity for participants in the subsistence fishery to harvest the amount of roe necessary for subsistence uses. When making this determination, the department considered: 1) vessel surveys conducted by the department beginning on March 18 indicated that there is a very large biomass of herring distributed throughout Sitka Sound; 2) a cumulative total of approximately 26.5 nmi of herring spawn has been recorded within regulatory closed waters from March 22 through March 30.

Approximately 983 tons of herring were harvested in the fishery that occurred on March 29; a total of approximately 6,030 tons of herring have been harvested through March 29. Harvest estimates for the fishery that occurred on March 30 will be included in the next advisory announcement.

The next aerial survey and fishery update are scheduled for Monday, March 31.

All aerial herring survey data can be reviewed online, including spawn lines and photos, in an interactive map application found at: <https://www.adfg.alaska.gov/index.cfm?adfg=commercialbyareasoutheast.herring#maps> or scan:
