2025/26 SOUTHEAST ALASKA COMMERCIAL DUNGENESS CRAB FISHERY

The 2025/26 commercial Dungeness crab fishery in Registration Area A (Southeast Alaska) will open at **8:00 a.m. on Sunday, June 15, 2025** [5 AAC 32.110]. Permit holders are advised to review 5 AAC 32.110 to note which areas open on June 15, 2025.

Recent Alaska Board of Fisheries (BOF) action on Southeast Alaska Dungeness crab

The BOF met in January 2025 to deliberate proposals for Southeast Alaska and Yakutat shellfish fisheries. **Changes to the Dungeness commercial fishery regulations that were adopted by the BOF at that meeting are not yet in effect and a separate advisory announcement will be issued when they are signed into law.**

Registration, Buoy Tags, and Pot Storage

Dungeness crab fishermen must register their vessel(s) with the department. Permit holders should verify that their Commercial Fisheries Entry Commission (CFEC) permit card and vessel license are valid for the 2025 Dungeness crab season prior to registering for the fishery. Questions about specific area office registration procedures should be directed to your local area office or Joe Stratman at (907) 772-5238. The holder of a valid 2025 CFEC permit for the Southeast Alaska Dungeness crab fishery must be onboard the vessel during fishing operations and the permit holder's name must be listed on the vessel registration.

Buoy tags must be purchased prior to fishing [5 AAC 32.126]; the price for crab buoy tags is \$1.25 each and nonrefundable. Buoy tags purchased for the 2024/25 season are still valid for the 2025/26 season; **however, Dungeness crab permit holders must register their vessel(s) with the department prior to fishing the 2025/26 season.** Buoy tags may be replaced when pots or buoy tags are lost. To obtain replacement tags, fishers must report the unique number of the lost tag on a 'Dungeness Buoy Tag Replacement Affidavit'. These forms are available at all Southeast area offices along with replacement buoy tags. Please refer to 5 AAC 32.126(a) for proper tag placement on the buoy assembly. Tenders must also register with the department prior to taking Dungeness crab onboard and may not have any Dungeness crab gear onboard or be used to fish for Dungeness crab [5 AAC 32.033].

After the season is closed, all Dungeness crab pots must be removed from the water except that pots may be stored on the grounds with all pot doors secured fully open and all bait and bait containers removed for no more than seven days after the Dungeness crab fishery regionwide closure in Registration Area A, or for no more than 72 hours after a partial area closure [5 AAC 32.052(b)(1) & (2)]. **Reporting of lost pots, or pots left in a closed area in fishing condition, should be directed to the Alaska Wildlife Troopers (AWT) offices in Juneau or Ketchikan** (contact numbers are listed on the bottom of page 4).

Fishery Management

The department will use catch and effort information from the first seven days of fishing to predict total harvest for the season, which will be compared to regulatory thresholds described in the Southeastern Alaska Area Dungeness Crab Fisheries Management Plan [5 AAC 32.146] to determine season length. Fishery participants should expect an advisory announcement by June 29, 2025, informing the fleet of the regionwide season length. The department will be conducting dockside sampling in all major ports. Permit holders intending to fish in District 16 are asked to contact Joe Stratman at (907) 772-5238 at the start of fishing operations.

Closed Waters

Regulatory closed waters are listed in 5 AAC 32.150 (Figures 1 and 2). The Registration Area D (Yakutat) Dungeness crab fishery will remain closed. The waters of Glacier Bay are closed by federal regulation to commercial Dungeness crab fishing. Fishers may contact the Glacier Bay National Park and Preserve at (907) 697-2230 for more information. Closed waters within 3,000 feet of the Annette Island Reserve will be addressed in a separate advisory announcement issued in September prior to the start of the fall/winter fishing season.

Operation of Other Gear

A person may not participate in a commercial Dungeness crab fishery in a Dungeness crab registration area if the person operated commercial, subsistence, sport, or personal use pots of any type during the 14-day period immediately before the opening of a commercial Dungeness crab fishery in the registration area where the fishing with pots occurred [5 AAC 32.053(b)(1)]; or operates a vessel that was used or operated by the person or by another person operating pots of any type in a commercial, subsistence, sport, or personal use fishery during the 14-day period immediately before the opening of the commercial Dungeness crab fishery [5 AAC 32.053(b)(2)]; except that a person or vessel that operates commercial king crab pots in waters deeper than 100 fathoms during the 14-day period immediately before the opening of the commercial Dungeness crab fishery in Registration Area A, may participate in the commercial Dungeness crab fishery [5 AAC 32.128(a)]. A vessel owner, or the owner's agent, may not register a vessel for the commercial Dungeness crab fishery and the commercial beam trawl shrimp fishery at the same time [5 AAC 32.128(b)].

Other Permits Required

A catcher–seller permit is required to sell raw, unprocessed fish or shellfish (other than bivalve mollusks) to unlicensed buyers. Examples include selling or attempting to sell to the general public dockside for noncommercial purposes, to a restaurant, grocery store, or an established fish market that has a processing waiver from the Alaska Department of Environmental Conservation (ADEC). The catcher–seller permit application can be found at:

<http://www.adfg.alaska.gov/index.cfm?adfg=fishlicense.sellers>.

Permit holders that are catcher-sellers are required to complete a fish ticket indicating the estimated number and weight of crab harvested before any crab are removed from their vessel [5 AAC 32.143]. A catcher–processor or direct marketer permit is required for fishers who receive, prepare, process, or transport seafood or fishery product to sell for human consumption or a person who custom processes a seafood or fishery product. A direct marketer or catcher–processor cannot buy fish from other fishers for resale or custom process for other fishers. Processing is any activity that modifies the physical condition of a seafood or fishery resource and requires permits from the Department of Environmental Conservation. Fisheries business license applications are accepted for direct marketer or catcher–processor permits through the Department of Revenue at the following website: <https://online-tax.alaska.gov/atp/webdoc/>.

Bait Harvest and Use

Holders of a Dungeness crab CFEC permit are not required to purchase a miscellaneous finfish permit card to harvest groundfish for bait used in the Dungeness crab fishery unless a person intends to sell the groundfish. Fishers are required to account for all groundfish bait on their crab fish tickets at the time of landing the crab for which the bait was taken. Groundfish harvested as bait should be marked as disposition code 92. Prohibited species for use as bait include sablefish, lingcod, thornyhead, shortraker, roughey, and yelloweye rockfish, except that the head, tail, fins, closely trimmed skeleton, and viscera of delivered or processed commercial sablefish, lingcod, thornyhead, shortraker, roughey, and yelloweye rockfish may be used for bait. Refer to 5 AAC 28.190 in the 2024–2025 Statewide Commercial Groundfish Fishing Regulations booklet (available in area offices or online) for more information on harvest of bait by commercial permit holders.

European Green Crab

Invasive European green crab are established in waters of the Annette Islands Reserve. Salmon and shellfish habitat is destroyed by European green crabs. More information on European green crab, including how to identify these five-spined crabs and how to report sightings of suspect crabs, can be found on the department's website at:

https://www.adfg.alaska.gov/index.cfm?adfg=invasiveprofiles.europeangreencrab_characteristics

Additional Information

Handling of soft-shell crabs results in increased discard mortality. **Fishers are asked to consult with their buyers on shell hardness criteria before harvesting crab** and are reminded to review the 2024–2025 Statewide Commercial Fishing Regulations Shrimp, Dungeness Crab and Miscellaneous Shellfish booklet (available in area offices or online) prior to the fishery.

Waters of Registration Area A Closed to Commercial Dungeness Crab Fishing Refer to 5 AAC 32.150 for Legal Descriptions

Note: Please refer to the Federal regulations regarding commercial fishing boundaries within the Glacier Bay National Park. For more information regarding current and legal Federal boundaries of Glacier Bay National Park, please call (907) 697-2230.
