Restrictions to minimize harvest of Taku River Chinook salmon in Section 11-B may be adjusted in an upcoming announcement based on updated inriver Chinook salmon stock assessment data.

Fishermen and processors are reminded that all salmon, including steelhead, commercially harvested but retained for personal use and not sold, must be reported on fish tickets at the time of delivery.

All Chinook salmon harvested in the commercial drift gillnet fisheries may be retained and sold. Chinook salmon less than 28 inches in length and those of Alaska hatchery origin will not be counted against Southeast Alaska's all gear harvest limit of the Pacific Salmon Treaty. Therefore, fishermen and tenders are requested to keep Chinook salmon harvested in THAs separate from those harvested in traditional fishing areas. Separating these harvests will allow for better accounting of harvests and assist in sampling the harvests to identify Alaska hatchery-produced Chinook salmon.

The Anita Bay, Nakat Inlet and Carroll Inlet THAs will open for drift gillnet on June 1, the Deep Inlet THA will open on June 2, and the Southeast Cove THA will open June 20, as previously announced. For specific open times and area for these THAs, refer to the advisory announcements released in April.
