

**FEDERAL AID  
ANNUAL PERFORMANCE REPORT**

ALASKA DEPARTMENT OF FISH AND GAME  
DIVISION OF WILDLIFE CONSERVATION  
PO Box 115526  
Juneau, AK 99811-5526

**ELK  
ANNUAL SURVEY AND INVENTORY**

**STATE:** Alaska

**GRANT AND SEGMENT NO.** W-33-7

**PROJECT NO.** 13.0

**PERIOD:** 1 July 2008 – 30 June 2009

**PROJECT LOCATION:** Statewide

**PROJECT TITLE:** The Status of Elk and Factors Influencing Their Populations

**REPORT DESCRIPTION:** This performance report describes elk survey and inventory activities. Regionwide activities are listed before specific activities by game management unit.

---

**The Status of Elk  
and Factors Influencing Their Populations in Region I**

**Regionwide Activities:**

**ACTIVITY:** Collect biological data on harvested elk including incisors for aging and photos of antlers.

The Petersburg Area Biologist collected an incisor and antler photographs for the only two elk harvested in Unit 3 during the report period.

**Activities by Unit:**

**Units 1A, 1B, 2, and 3**

**ACTIVITY 1:** Monitor for presence of elk in southern southeast Alaska through contact with deer, elk, moose and bear hunters.

Petersburg and Ketchikan area staff spoke with pilots, commercial fisherman, and deer, moose and black bear hunters opportunistically to gain an understanding of elk sightings and gather information on elk dispersal in southern Southeast Alaska.

**ACTIVITY 2:** Monitor the general elk hunt in Units 1, 2, and “the remainder of Unit 3.”

Staff received no reports of elk harvested other than the two animals harvested within the Etolin-Zarembo permit hunt area during the archery-only season.

**Unit 3**

**ACTIVITY 1:** Monitor the Unit 3 Etolin and Zarembo Islands elk hunt and analyze the permit report data.

The Petersburg Area Biologist and other staff members spoke with hunters before, during and/or after their hunts. Hunt-based parameters were evaluated by use of mandatory drawing and registration permit hunt reports, incisors, and photos of antlers submitted by hunters.

ACTIVITY 2: Conduct spring elk fecal pellet surveys on Etolin, Zarembo and Onslow Islands in conjunction with spring deer pellet-group surveys.

A total of 3 VCU's were completed on Zarembo Island. Deer pellet densities were down in two VCU's and up in one VCU. No pellet group transects were completed on Etolin Island due to a shortage of staff. Late spring snowmelt caused a delay in pellet transect completion across the region, leading to staff being occupied with other duties.

ACTIVITY 3: Capture and radio-collar 3-5 elk to evaluate movements, habitat use, and seasonal use of range.

Five elk were captured and fitted with radio collars during the report period. Data will be downloaded at opportune times to determine habitat use and movement patterns by these elk.

**Submitted by:** Neil L. Barten, Region I Management Coordinator

## **The Status of Elk and Factors Influencing Their Populations in Region II**

### **Regionwide Activities:**

ACTIVITY 1: Prepare a biennial regional elk management report.

The next biennial elk management report is due to DWC HQ on 15 April 2010.

### **Unit 8:**

ACTIVITY 1: Conduct aerial sex and age population composition surveys to determine status, trends, productivity, and mortality of elk.

We completed two aerial composition surveys for a portion of the population. Survey results suggested a stable to decreasing trend in most of the herds observed. The unit population of elk was estimated at 830 animals.

ACTIVITY 2: Monitor elk seasonal distribution through relocation of radio-collared elk.

We deployed 12 VHF and two GPS radio collars on adult female elk in May 2008. Before 1998 the annual home ranges of most of the elk herds were relatively stable with little interchange between herds. Recent data indicate considerable mixing of herds and changes in traditional use areas during the winter and early spring. We suspect many of these changes are because of significant alteration to winter ranges by commercial logging operations.

ACTIVITY 3: Monitor the elk harvest through field observations, hunter harvest reports, and contact with hunters.

Project No. 13.0 - Elk S&I  
FY09 Annual Performance Report

Harvest report cards returned by hunters provided data on hunting effort and harvest. We issued 782 drawing permits and registration permits. Hunters reported harvesting 81 elk (57 males, 24 females). The harvest by permit hunt was: Raspberry Island drawing permit hunt, three males, four females; southwest Afognak drawing permit hunt, three males, two females; eastern Afognak drawing permit hunt, 12 males, 10 females; remainder of Unit 8, 14 male, one female; registration permit hunt, 25 males, seven females; federal subsistence hunt, 0. The reported 2007-08 harvest of 81 elk was about 10% of the estimated population, a slight decrease over the estimated 2006-07 harvest of 11%.

We issued one Emergency Order to close a portion of registration hunt RE755. The closure occurred on Oct. 22, 2007, for the southeastern portion of registration hunt RE755 (south of a line from the head of Danger bay to the head of Sapos Bay).
