

Naknek-Kvichak AC Proposal Rulings

Brian Cato

February 23, 2016

Proposal 22 - Support. WASSIP shows unacceptable harvest percent of Bristol Bay fish. While fishery was created for Meshik Management, its impact on Meshik escapement is almost non-existent. One committee member stated extreme fluctuation of spawning salmon numbers over the past several years. Several Port Heiden substance fishermen state very low harvest over the past years.

Proposal 24 - Supported as amended. Exclude the Three Hills area, as Bristol Bay interception is low.

Proposal 155 - Support. For the same reasons as proposal 22.

Proposal 157 - Oppose. With the apparent ineffectiveness of any Meshik harvest, we feel any fishing extension only serves to increase intercept.

Proposal 158 - Support as amended. Exclude Three Hills area as interception is lower.

Proposal 159-171 - Support. The AC supports any area where boundaries are defined by latitude and longitude.
