Subject: Hatchery salmon released to the wild.
Date: Friday, October 5, 2018 2:36:36 PM

Cows, pigs and chickens are penned up, domesticly raised with drugs. antibiotics and flesh coloring to feed the human population and it has been proven time and time again that it is a inferior food source that affects human physiology in many ways. So, fish hatchery/ return to the wild programs are the best thing we can do for our selves. Those that support a reduction in hatchery programs are cheering for the drug companies and health insurance companies to continue to raise their prices because of a continuous epidemic of poor health larglely due to the lack of "real" food.
