

Submitted by: Southeast Alaska Seiners

Regarding: Proposals 122-124

These graphs show the percentage of sockeye harvested by the seine fleet along the Hawk Inlet shoreline compared to the gillnet fisheries in District 11 and 15 for the stat weeks 27 through 31 (stat week 31 is typically the end of July /beginning of August). The most recent four year management has been under the 15,000 sockeye cap management ending on July 22, which is the same as is stated in Prop. 122

112-16 Traditional purse seine harvest
