

1. I definitely oppose proposal #283 because it fails to support the preservation of the last remaining run of late run king salmon on the Kenai River. This proposal attempts to increase profits for the commercial fishing industry by lowering king escapement goals. It took decades to create run protection goals that were designed to prevent the destruction of this last remaining run of giant kings on Earth. With Alaska king returns down everywhere now would be a ridiculously bad time to even consider removing protections from this run.
