

I am a Bristol Bay fisherman and I strongly urge the Board of Fish to delay action on the the Nushagak King Salmon Action Plan until the March 10-13, 2023 meeting, so that I and other stakeholders might have a chance to adequately review and comment on the proposed changes. Further the Nushagak King Salmon Action Plan document provides no cost/benefit analysis, acknowledges the “stock of concern” label is based on a deeply flawed sonar system never intended to count king salmon, and was only released after the deadline for written comments.
