

# Proposal 140 Comment

Tony Parra

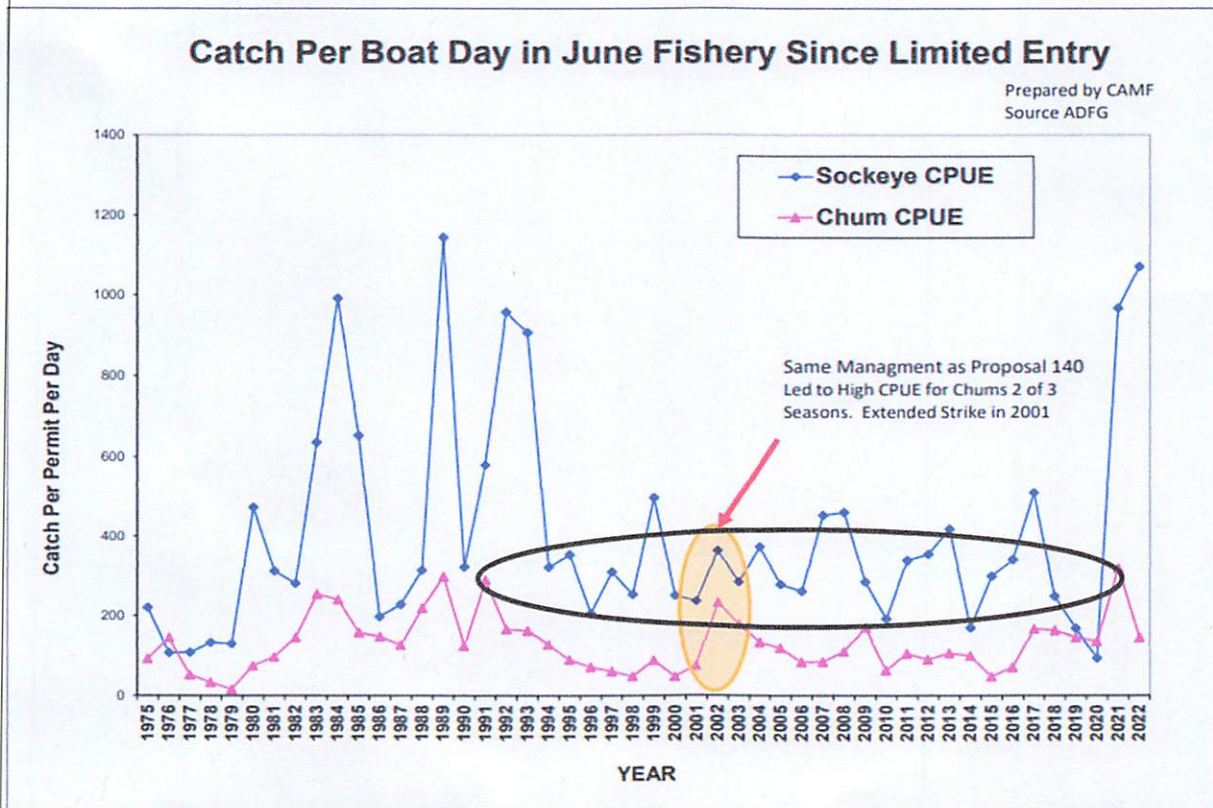

Fishery Biologist (Retired), Area M Fisherman, and CAMF Member

Proposal 140-Opposed RC014

June South Peninsula harvest rates of CWAK chum range from 2.1%-6.9% and was 5.7% in 2022.

Proposal 140 fails to address or mitigate the proximate causes of run fluctuations.

Moreover, in 2002 & 2003, Proposal 140 management resulted in the highest chum CPUE in a 30-year timespan.

Proposal 140, if adopted, is more likely to increase CWAK and total chum harvests than reduce them.
