

PROPOSAL 42

5 AAC 92.008(1). Harvest guideline levels.

Increase the annual harvest of wolves in Unit 2 as follows:

5 AAC 92.008(1) would be modified to read:

"(1) wolves: the annual harvest of wolves in Unit 2 should not exceed **30** [20] percent of the **most recent** unit-wide, preseason population estimated by the department;"

What is the issue you would like the board to address and why? The Southeast Alaska Subsistence Regional Advisory Council (Council) seeks to increase the allowable take of wolves in Unit 2. The Council is concerned that previous quotas implemented have been too conservative and that the reductions in those harvest quotas during the 2015–2016 and 2016–2017 hunting and trapping seasons were not reflective of the actual wolf population for Unit 2.

PROPOSED BY: Southeast Alaska Subsistence Regional Advisory Council (EG-F18-016)
