# Annual Report to the Alaska Board of Game on Intensive Management for Moose with Wolf, Black Bear, and Grizzly Bear Predation Control in Game Management Unit 19D East

## Prepared by the Division of Wildlife Conservation February 2022

- 1) Description of IM Program<sup>1</sup>
  - A) This report is an annual evaluation for a predation control program authorized by the Alaska Board of Game (board) under 5 AAC 92.123
  - B) Month this report was submitted by the Department to the board:

Annual Report, February 2022

- C) Program name: Unit 19D East wolf and bear predation control program (Fig. 1).
- D) Existing program has an associated Operational Plan.
- E) Game Management Unit fully or partly included in IM program area: Unit 19D East.
- F) IM objective is a moose population size of 6,000–8,000 with a harvest of 400–600.
- G) Month and year the current predation control program was originally authorized by the board: Fall 1995. Indicate date(s) if renewed: January 2000, March 2003, January 2006, May 2006, March 2009, February 2014, March 2020.
- H) Predation control is currently active in this IM area.
- I) If active, month and year the current predation control program began: December 2003.
- J) A habitat management program funded by the department or from other sources is currently active in this IM area: No.
- **K)** Size of IM program area (square miles) and geographic description: Unit 19D East is 8.569 mi<sup>2</sup>.
- L) Size and geographic description of area for assessing ungulate abundance: Wolf Control Focus Area (WCFA) is 5,579 mi<sup>2</sup>; Bear Control Focus Area (BCFA) is 528 mi<sup>2</sup>.
- M) Size and geographic description of area for ungulate harvest reporting: WCFA is 5.579 mi<sup>2</sup>.
- N) Size and geographic description of area for assessing predator abundance: WCFA is 5,579 mi<sup>2</sup>; BCFA is 528 mi<sup>2</sup>.
- **O) Size and geographic description of predation control area:** WCFA is 5,579 mi<sup>2</sup>; BCFA is 528 mi<sup>2</sup>.

Annual Report on Intensive Management for Moose with Predation Control in Unit 19D East Alaska Department of Fish & Game, Division of Wildlife Conservation, February 2021

<sup>&</sup>lt;sup>1</sup> For purpose and context of this report format, see *Intensive Management Protocol, section on Tools for Program Implementation and Assessment* 

- P) Criteria for evaluating progress toward IM objectives: Moose abundance and harvest.
- **Q)** Criteria for success with this program: WCFA abundance=1.0 moose/mi<sup>2</sup> (~5,600 moose) moose and WCFA harvest=225 moose.
- **R)** Department recommendation for IM program in this reporting period: Continue program (details provided in section 6).

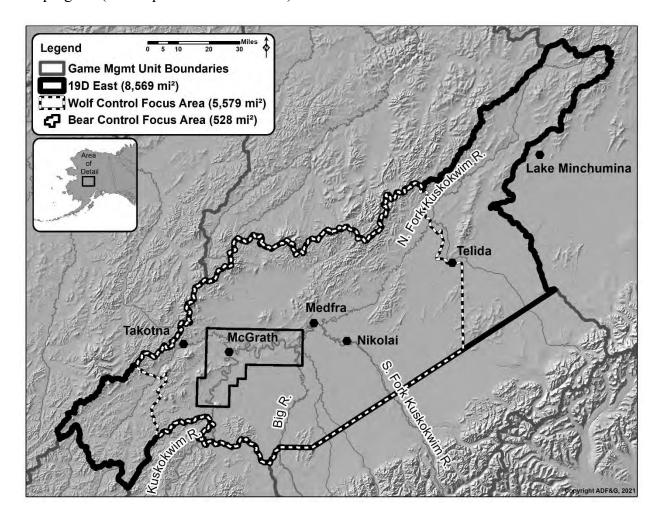

Figure 1. Unit 19D East intensive management areas.

#### 2) Prey data

**Date(s) and method of most recent abundance assessment for moose:** November 2020 Geospatial Population Estimator (GSPE) in a 1,118 mi<sup>2</sup> area surrounding the BCFA.

Compared to IM area, was a similar trend and magnitude of difference in abundance observed in nearby non-treatment area(s) since program inception: Non-treatment area not established.

**Date(s) of most recent age and sex composition survey:** November 2020 GSPE in a 1,118 mi<sup>2</sup> area surrounding the BCFA.

Compared to IM area, was a similar composition trend and magnitude of difference in composition observed in nearby non-treatment area(s) since program inception: Non-treatment area not established.

Table 1. Moose abundance, age, and sex composition in a 1,118 mi<sup>2</sup> area surrounding the BCFA since program implementation in year 1. Regulatory year is 1 July to 30 June (e.g.,

Regulatory Year 2001 is 1 July 2001 to 30 June 2002).

| Year 21 | 2021           |                               |                                  |                   |                  |         |  |  |  |  |

<sup>&</sup>lt;sup>a</sup>Estimate with sightability correction factor applied

**Describe trend in abundance or composition:** Moose numbers have increased substantially since predator removals began in 2003. Within the BCFA, a pre-control survey in 2001 resulted in an estimate of 868 moose, while there were 2,201 moose in 2020.

Table 2. Moose harvest from a 1,118 mi<sup>2</sup> area surrounding the BCFA since program implementation in Regulatory Year 2001 (Year 1). Moose harvest from WCFA (5,579 mi<sup>2</sup>) since Regulatory Year 2013. Regulatory year is 1 July to 30 June (e.g., Regulatory Year 2001 is 1 July 2001 to 30 June 2002).

<sup>&</sup>lt;sup>a</sup> Mortuary harvests

**Describe trend in harvest:** Harvest reached a peak in Regulatory Year 2015 and has been stable since RY18.

Describe any other harvest related trend if appropriate: None.

#### 3) Predator data

#### **Wolves**

Date(s) and method of most recent spring abundance assessment for wolves in the WCFA: March 2018, pilot interviews.

Date(s) and method of most recent fall abundance assessment for wolves in the WCFA: Calculated for fall 2017 by adding total removal from WCFA to spring 2018 abundance estimate.

<sup>&</sup>lt;sup>b</sup> Records destroyed by fire

<sup>&</sup>lt;sup>c</sup>Preliminary

Table 3. Wolf abundance objectives and removal in Wolf Control Focus Area (WCFA) since program implementation in year 1. Removal objectives are to reduce wolf numbers by 60-80% in the WCFA. Only removing wolves from the WCFA will ensure wolves persist in the unit. The current WCFA was established in Regulatory Year 2020. Prior to Regulatory Year 2020, control was conducted in different geographic areas. Regulatory year is 1 July to 30 June (e.g., RY 2001 is 1 July 2001 to 30 June 2002).

<sup>&</sup>lt;sup>a</sup>Calculated by adding total removal to WCFA spring abundance during each regulatory year.

#### **Black Bears**

Date(s) and method of most recent spring abundance assessment for black bears in the BCFA: May 2016, mark-recapture estimator.

Date(s) and method of most recent fall abundance assessment for black bears in the BCFA: August 2010, calculated for fall 2010 by subtracting total removal in Regulatory Year 2009 from the May 2010 abundance estimate.

#### Other research or evidence of trend or abundance status in black bears:

Alaska Department of Fish and Game, Federal Aid in Wildlife Restoration, Final Wildlife Research Report ADF&G/DWC/WRR-2012-7, Grants W-33-4 through W-33-10, Project 1.62, Juneau, Alaska.

<sup>&</sup>lt;sup>b</sup>Public control removal began in regulatory year 2003

<sup>&</sup>lt;sup>c</sup>Calculated by extrapolating density within a 3,210 mi<sup>2</sup> aerial reconnaissance survey area within the WCFA to the entire WCFA

<sup>&</sup>lt;sup>d</sup>Abundance based on private pilot and department biologist observations.

<sup>&</sup>lt;sup>e</sup>Preliminary, season in progress

Table 4. Black bear abundance and removal in Bear Control Focus Area (BCFA) since program implementation in year 1. Public bear control ended June 30, 2014. When active, the removal objective was to reduce bear numbers as low as possible within the BCFA. The May 2004 estimated black bear population for all of Unit 19D East was approximately 1,700. The regulatory year is 1 July to 30 June (e.g, regulatory year 2001 is 1 July 2001 to 30 June 2002).

#### 5) Costs specific to implementing Intensive Management

Table 7. Unit 19D East program cost (\$1,000 = 1.0) of agency salary based on estimate of proportional time of field level staff and cost of operations for intensive management activities performed by personnel in the Department or work by other state agencies (e.g., Division of Forestry) or contractors in Unit 19D East during years 10-20. Fiscal year is also 1 July to 30 June but the year is one greater than the comparable regulatory year (e.g, Fiscal Year 2011 is 1 July 2010 to 30 June 2011).

<sup>&</sup>lt;sup>a</sup>State or private funds only.

### 6) Evaluation (February 2021) for program renewal following Year 20 and department recommendations for Unit 19D East

Has progress toward defined criteria been achieved? Yes. Moose population and harvest have increased compared to pre-control. Moose density in the BCFA evaluation area is 100% greater than objectives, while moose density in the WCFA excluding the BCFA is below objective at 0.8 moose per mi<sup>2</sup>. At the scale of the WCFA, abundance is slightly above objective with 1.1 moose per mi<sup>2</sup>.

Has achievement of success criteria occurred? Population objective has been achieved, but harvest objective has not been achieved. Harvest is approximately 50% of objective at the WCFA scale.

**Recommendation for IM program:** Continue program.

Rationale for recommendation on overall program: Population objectives have been achieved, and progress towards harvest objectives appears to have stabilized at 50% of the objective. A winter hunt in place since RY20 has incrementally increased harvest of cows. This

<sup>&</sup>lt;sup>b</sup>Person-months (22 days per month)

<sup>&</sup>lt;sup>c</sup>Salary plus operations. Beginning in Fiscal Year 2019, Other IM activities includes normal survey and inventory work, which is typically more robust than standard survey and inventory work.

<sup>&</sup>lt;sup>d</sup>Separate from implementing IM program but beneficial for understanding of ecological or human response to management treatment (scientific approach that is not unique to IM).

hunt provides an additional opportunity for hunters who were not able to harvest a moose in the fall. The three-year average twinning rate is 19%, and within the threshold for stabilizing the abundance of a moose population (10-20%; Boertje et al 2007). Data collected on moose abundance and nutritional status in RY22 (e.g., short-yearling weights and twinning rates) will help determine if wolf control should be suspended. The program was reauthorized during the March 2020 Board of Game providing an option for department bear control; continuing public wolf control; establishing population criteria of 1.0 moose/mi² within the WCFA; establishing harvest criteria of 225 moose from within the WCFA; and evaluating harvest from within the WCFA. This predation control program expires June 30, 2026.
